Manage applications and workloads

Add to workload

You can add one or more volumes to an existing or new workload for volumes that are not currently associated with a workload.

About this task

Volumes are not associated with a workload if they have been created using the command line interface (CLI) or if they have been migrated (imported/exported) from a different storage array.

Steps

1. Select **Storage > Volumes**.

2. Select the **Applications & Workloads** tab.

The Applications & Workloads view appears.

3. Select **Add to Workload**.

The **Select Workload** dialog box appears.

4. Do one of the following actions:

- **Add volumes to an existing workload** — Select this option to add volumes to an existing workload.

Use the drop-down list to select a workload. The workload's associated application type is assigned to the volumes you add to this workload.

- **Add volumes to a new workload** — Select this option to define a new workload for an application type and add volumes to the new workload.

5. Select **Next** to continue with the add to workload sequence.

The **Select Volumes** dialog box appears.

6. Select the volumes you want to add to the workload.
7. Review the volumes that you want to add to the selected workload.
8. When you are satisfied with your workload configuration, click **Finish**.

Change workload settings

You can change the name for a workload and view its associated application type. Change the name of a workload when the current name is no longer meaningful or applicable.

Steps

1. Select **Storage > Volumes**.

2. Select the **Applications & Workloads** tab.

The Applications & Workloads view appears.

3. Select the workload that you want to change, and then select **View/Edit Settings**.

The **Applications & Workloads Settings** dialog box appears.

4. **Optional:** Change the user-supplied name of the workload.
5. Click **Save**.
