# Install and setup

## Start here: Choose your installation and setup experience

For most configurations (including ASA configurations), you can choose from different content formats.

- [Quick steps](#)

A printable PDF of step-by-step instructions with live links to additional content.

- [Video steps](#)

Video step-by-step instructions.

- [Detailed steps](#)

Online step-by-step instructions with live links to additional content.

If your system is in a MetroCluster IP configuration, see the [Install MetroCluster IP Configuration](#) instructions.

## Quick steps - ASA A800

This page gives graphic instructions for a typical installation of your system from racking and cabling, through initial system bring-up. Use the [AFF A800 Installation and Setup Instructions](#) if you are familiar with installing NetApp systems.

The ASA A800 uses the same installation procedure as the AFF A800 system.

## Video steps - ASA A800

The following video shows how to install and cable your new system.

["Animation - Installation and Setup of an AFF A800"](#)

The ASA A800 uses the same installation procedure as the AFF A800 system.

## Detailed steps - ASA A800

This page gives detailed step-by-step instructions for installing an ASA A800 system.

### Step 1: Prepare for installation

To install your system, you need to create an account and register the system. You also need to inventory the appropriate number and type of cables for your system and collect specific network information.

You need to have access to the [NetApp Hardware Universe](#) (HWU) for information about site requirements as well as additional information on your configured system. You might also want to have access to the [Release](#)

Notes for your version of ONTAP for more information about this system.

### What you need

You need to provide the following at your site:

- Rack space for the storage system
- Phillips #2 screwdriver
- Additional networking cables to connect your system to your network switch and laptop or console with a Web browser
  1. Unpack the contents of all boxes.
  2. Record the system serial number from the controllers.

### Steps

1. Set up your account:
  - a. Log in to your existing account or create an account.
  - b. Register ([NetApp Product Registration](#)) your system.
2. Download and install [NetApp Downloads: Config Advisor](#) on your laptop.
3. Inventory and make a note of the number and types of cables you received.

The following table identifies the types of cables you might receive. If you receive a cable not listed in the table, see the [NetApp Hardware Universe](#) to locate the cable and identify its use.

Connector type	Part number and length	Type of cable...	For...
100 GbE cable	X66211A-05 (112-00595), 0.5m X66211-1 (112-00573), 1m X66211-2 (112-00574), 2m X66211-5 (112-00576), 5m		<ul style="list-style-type: none"> <li>• HA interconnect</li> <li>• Cluster interconnect network</li> <li>• Storage, Data</li> </ul>
10 GbE cable	X6566B-3-R6 (112-00300), 3m; X6566B-5-R6 (112-00301), 5m		<ul style="list-style-type: none"> <li>• Data</li> </ul>
25 GbE cable	X66240A-2 (112-00598), 2m; X66240A-5 (112-00600), 5m		<ul style="list-style-type: none"> <li>• Data</li> </ul>

Connector type	Part number and length	Type of cable...	For...
RJ-45 (order dependent)	Not applicable		<ul style="list-style-type: none"> <li>• Management</li> </ul>
Fibre Channel	X66250-2 (112-00342) 2m; X66250-5 (112-00344) 5m; X66250-15 (112-00346) 15m; X66250-30 (112-00347) 30m		<ul style="list-style-type: none"> <li>• Network</li> </ul>
Micro-USB console cable	Not applicable		<ul style="list-style-type: none"> <li>• Console connection during software setup</li> </ul>
Power cables	Not applicable		Connecting the PSUs to power source

4. Download and complete the [Cluster Configuration Worksheet](#).

## Step 2: Install the hardware

You need to install your system in a 4-post rack or NetApp system cabinet, as applicable.

### Steps

1. Install the rail kits, as needed.

#### [Installing SuperRail into a four-post rack](#)

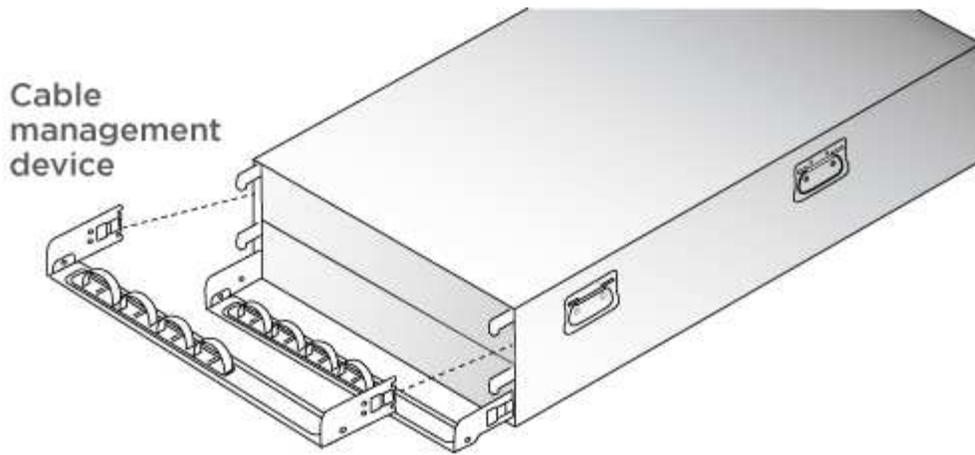

2. Install and secure your system using the instructions included with the rail kit.

You need to be aware of the safety concerns associated with the weight of the system.

3. Attach cable management devices (as shown).

4. Place the bezel on the front of the system.

### Step 3: Cable controllers

There is required cabling for your platform's cluster using the two-node switchless cluster method or the cluster interconnect network method. There is optional cabling to the Fibre Channel or iSCSI host networks or direct-attached storage. This cabling is not exclusive; you can have cable to a host network and storage.

#### Required cabling: Cable controllers to a cluster

Cable the controllers to a cluster by using the two-node switchless cluster method or by using the cluster interconnect network.

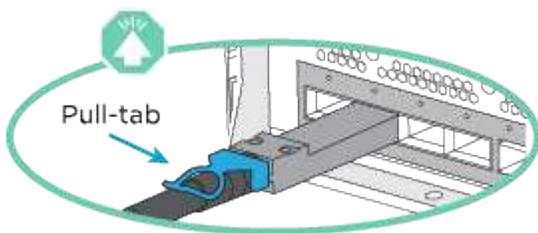

##### Option 1: Cable a two-node switchless cluster

Management network ports on the controllers are connected to switches. The HA interconnect and cluster interconnect ports are cabled on both controllers.

##### Before you begin

Contact your network administrator for information about connecting the system to the switches.

Be sure to check the illustration arrow for the proper cable connector pull-tab orientation.

As you insert the connector, you should feel it click into place; if you do not feel it click, remove it, turn it around and try again.

##### Steps

1. Use the animation or the tabulated steps to complete the cabling between the controllers and the switches:

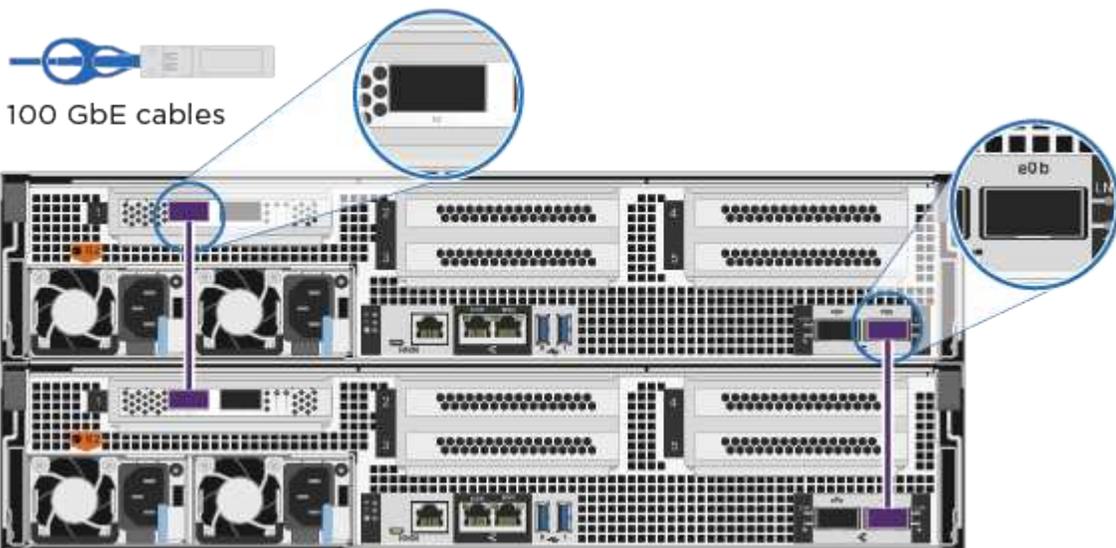

[Animation - Cable a two-node switchless cluster](#)

**Step**      **Perform on each controller module**

**1**

Cable the HA interconnect ports:

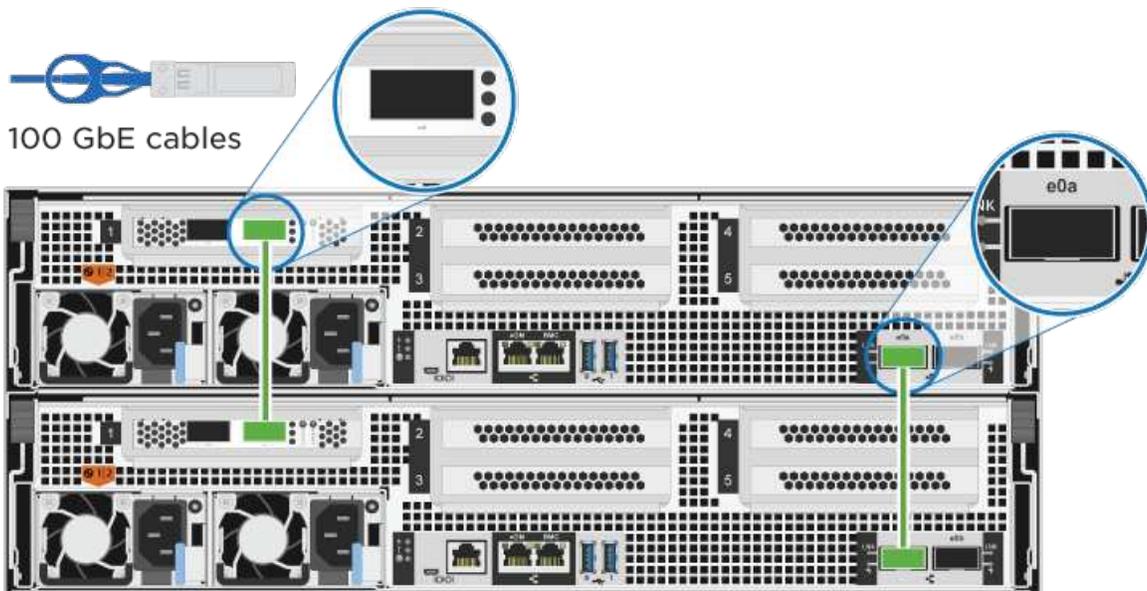

- e0b to e0b
- e1b to e1b

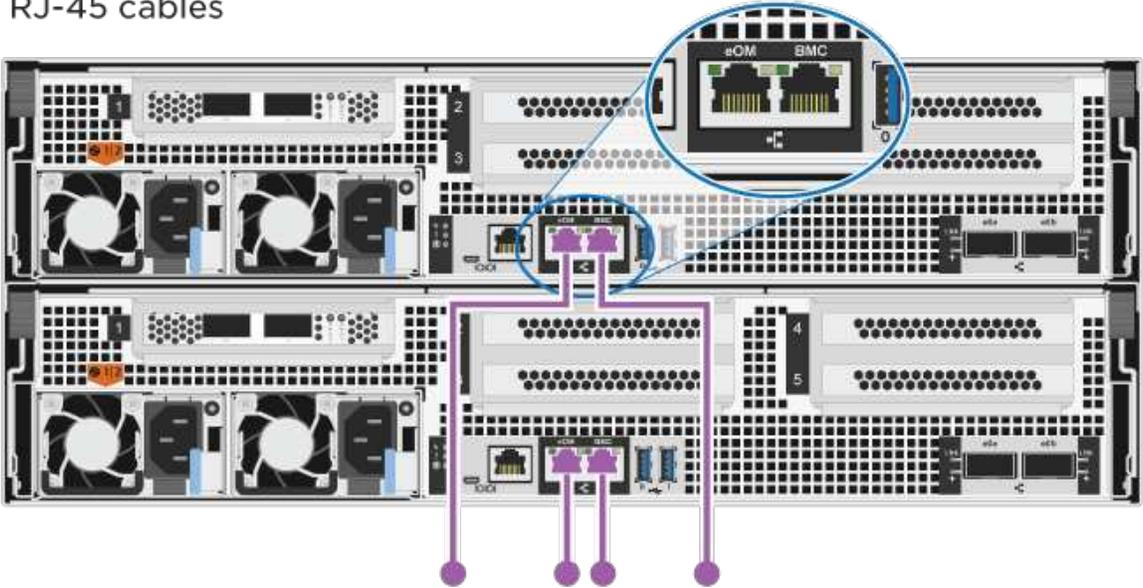

**2**

Cable the cluster interconnect ports:

- e0a to e0a
- e1a to e1a

<b>Step</b>	<b>Perform on each controller module</b>
<p data-bbox="185 163 256 214"><b>3</b></p> <p data-bbox="315 163 1143 193">Cable the management ports to the management network switches</p> <p data-bbox="334 235 496 264"></p> <p data-bbox="334 289 552 319">RJ-45 cables</p> 	
	<p data-bbox="315 961 876 991">DO NOT plug in the power cords at this point.</p>

2. To perform optional cabling, see:

- [Option 1: Cable to a Fibre Channel host network](#)
- [Option 2: Cable to a 10GbE host network](#)
- [Option 3: Cable the controllers to a single drive shelf](#)
- [Option 4: Cable the controllers to two drive shelves](#)

3. To complete setting up your system, see [Step 4: Complete system setup and configuration](#).

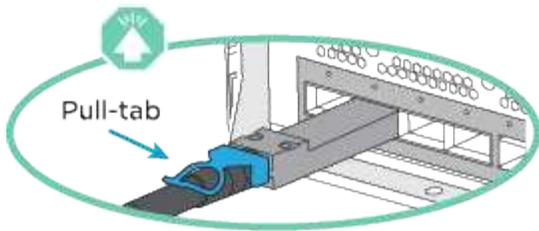

**Option 2: Cable a switched cluster**

Cluster interconnect and management network ports on the controllers are connected to switches while the HA interconnect ports are cabled on both controllers.

**Before you begin**

Contact your network administrator for information about connecting the system to the switches.

Be sure to check the illustration arrow for the proper cable connector pull-tab orientation.

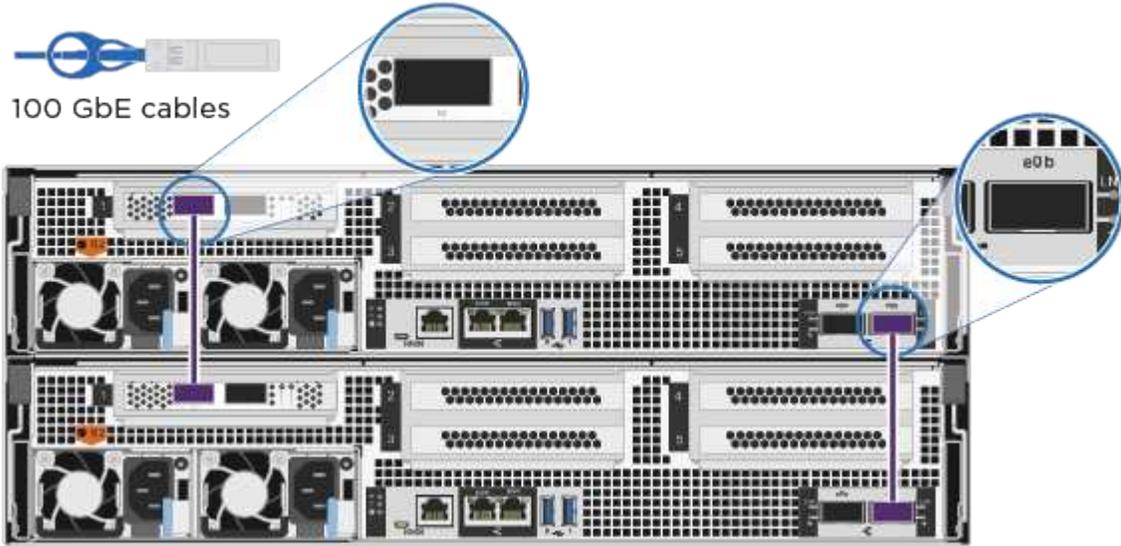

As you insert the connector, you should feel it click into place; if you do not feel it click, remove it, turn it around and try again.

### Steps

1. Use the animation or the tabulated steps to complete the cabling between the controllers and the switches:

#### [Animation - Cable a switched cluster](#)

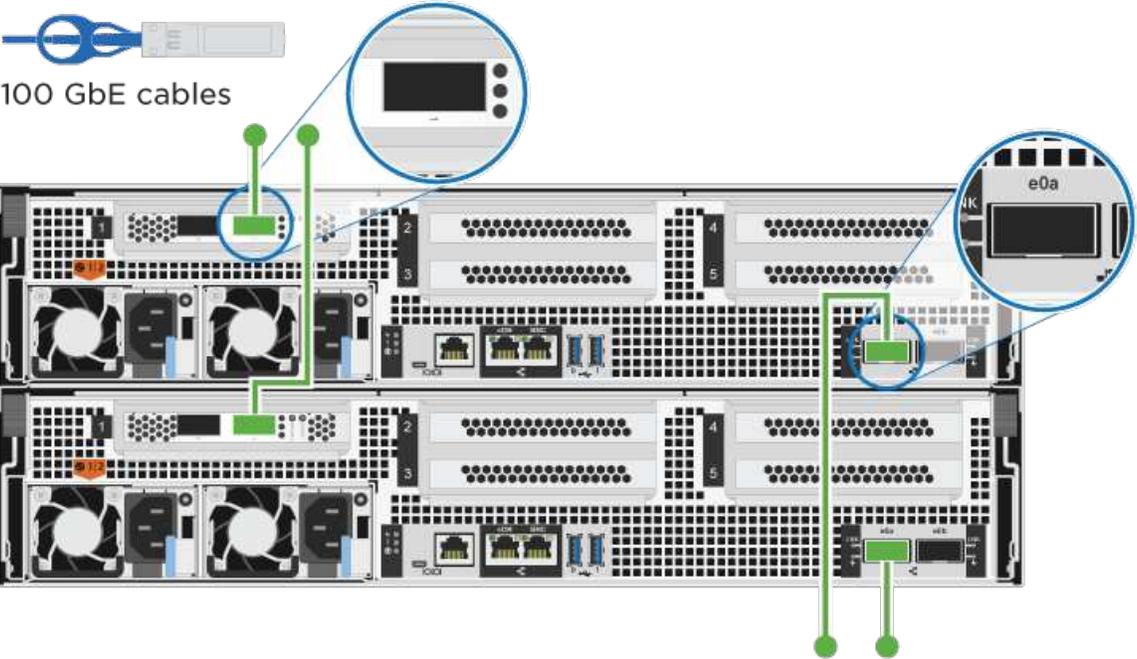

Step	Perform on each controller module
<p><b>1</b></p>	<p>Cable the HA interconnect ports:</p> <ul style="list-style-type: none"> <li>• e0b to e0b</li> <li>• e1b to e1b</li> </ul>  <p>100 GbE cables</p>

**Step** Perform on each controller module

**2**

Cable the cluster interconnect ports to the 100 GbE cluster interconnect switches.

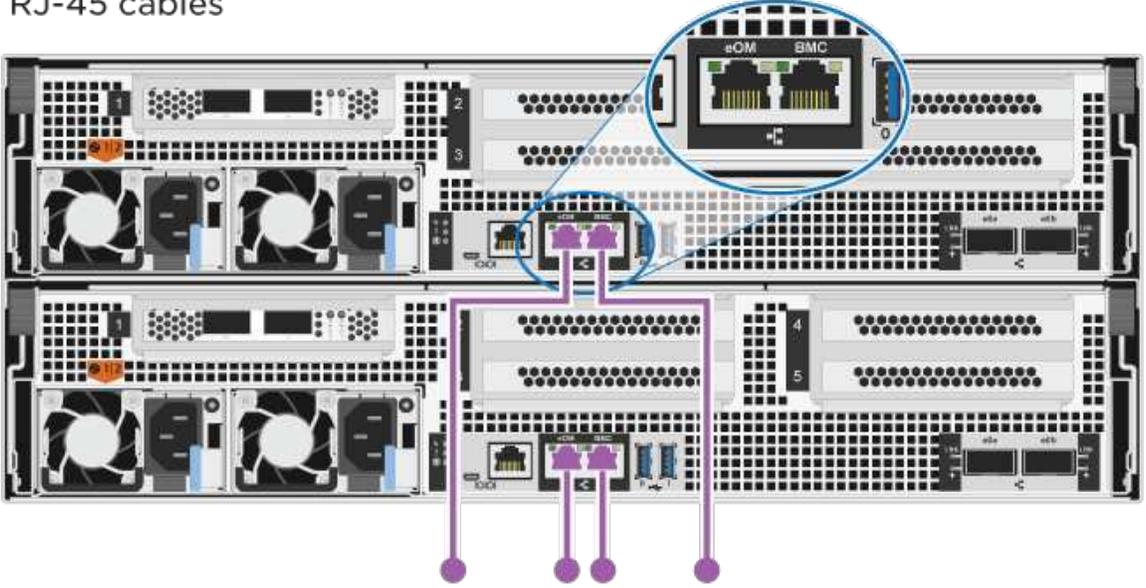

- e0a
- e1a

**3**

Cable the management ports to the management network switches

RJ-45 cables

Step	Perform on each controller module
	DO NOT plug in the power cords at this point.

2. To perform optional cabling, see:

- [Option 1: Cable to a Fibre Channel host network](#)
- [Option 2: Cable to a 10GbE host network](#)
- [Option 3: Cable the controllers to a single drive shelf](#)
- [Option 4: Cable the controllers to two drive shelves](#)

3. To complete setting up your system, see [Step 4: Complete system setup and configuration](#).

### Optional cabling: Cable configuration-dependent options

You have configuration-dependent optional cabling to the Fibre Channel or iSCSI host networks or direct-attached storage. This cabling is not exclusive; you can have cabling to a host network and storage.

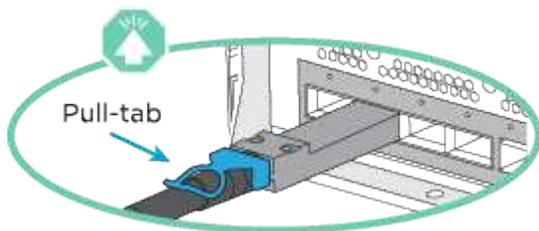

#### Option 1: Cable to a Fibre Channel host network

Fibre Channel ports on the controllers are connected to Fibre Channel host network switches.

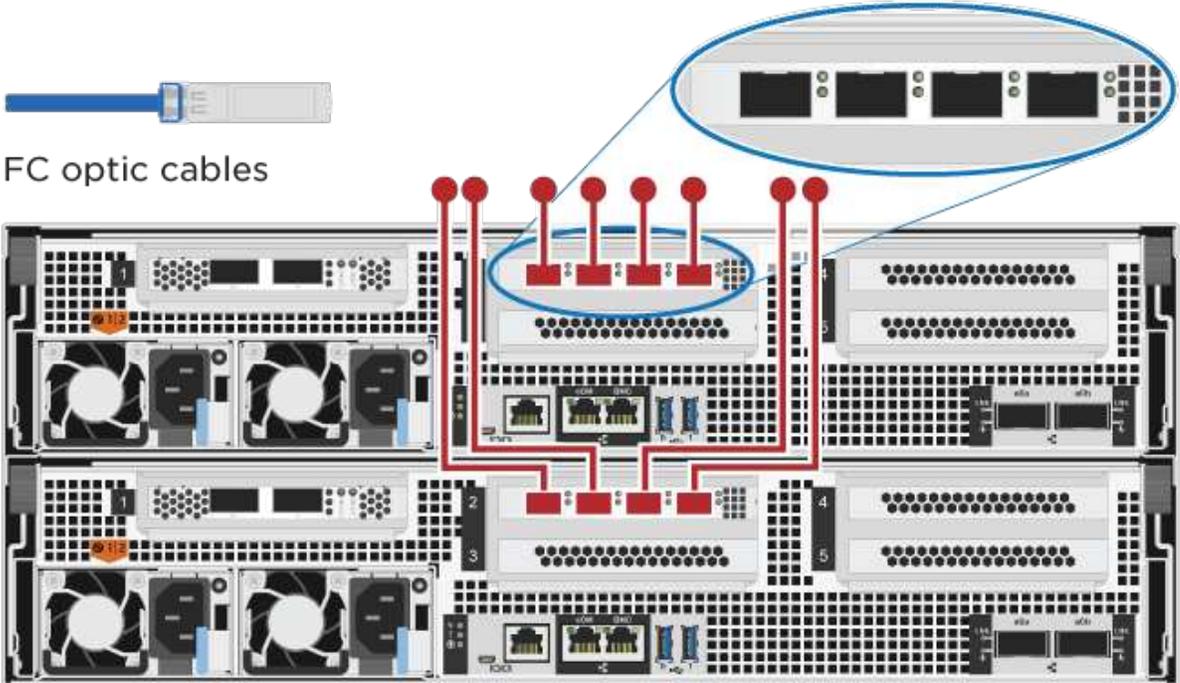

#### Before you begin

Contact your network administrator for information about connecting the system to the switches.

Be sure to check the illustration arrow for the proper cable connector pull-tab orientation.

As you insert the connector, you should feel it click into place; if you do not feel it click, remove it, turn it around and try again.

Step	Perform on each controller module
1	<p>Cable ports 2a through 2d to the FC host switches.</p> 
2	<p>To perform other optional cabling, choose from:</p> <ul style="list-style-type: none"> <li>• <a href="#">Option 3: Cable the controllers to a single drive shelf</a></li> <li>• <a href="#">Option 4: Cable the controllers to two drive shelves</a></li> </ul>
3	<p>To complete setting up your system, see <a href="#">Step 4: Complete system setup and configuration</a>.</p>

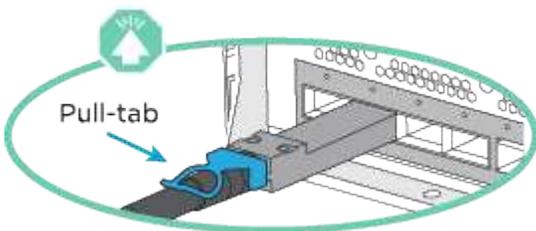

### Option 2: Cable to a 10GbE host network

10GbE ports on the controllers are connected to 10GbE host network switches.

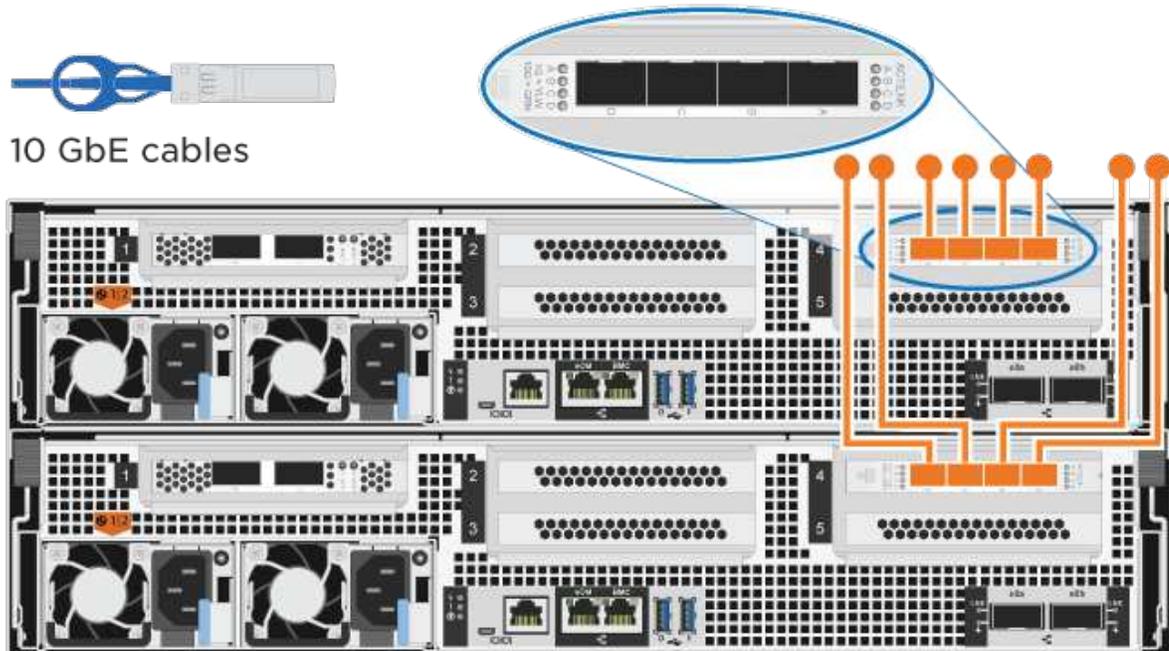

#### Before you begin

Contact your network administrator for information about connecting the system to the switches.

Be sure to check the illustration arrow for the proper cable connector pull-tab orientation.

As you insert the connector, you should feel it click into place; if you do not feel it click, remove it, turn it around and try again.

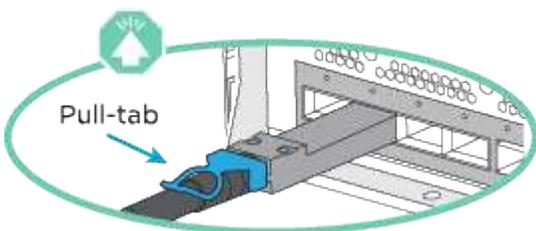

Step	Perform on each controller module
1	<p>Cable ports e4a through e4d to the 10GbE host network switches.</p>  <p>10 GbE cables</p>
2	<p>To perform other optional cabling, choose from:</p> <ul style="list-style-type: none"> <li>• <a href="#">Option 3: Cable the controllers to a single drive shelf</a></li> <li>• <a href="#">Option 4: Cable the controllers to two drive shelves</a></li> </ul>
3	<p>To complete setting up your system, see <a href="#">Step 4: Complete system setup and configuration</a>.</p>

### Option 3: Cable the controllers to a single drive shelf

You must cable each controller to the NSM modules on the NS224 drive shelf.

#### Before you begin

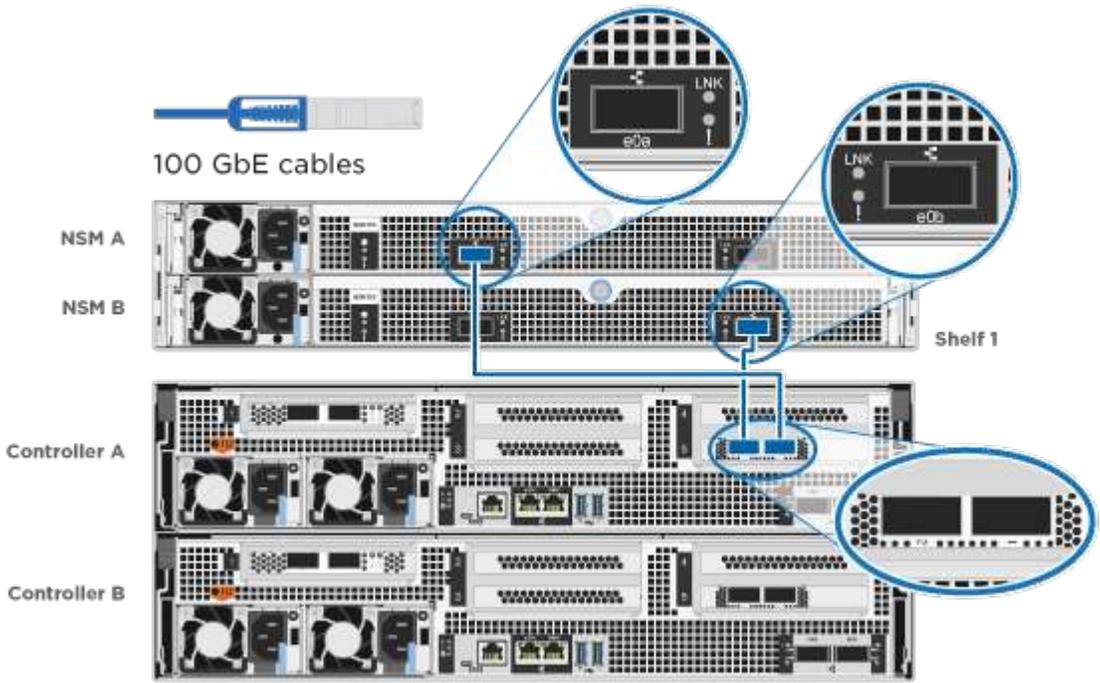

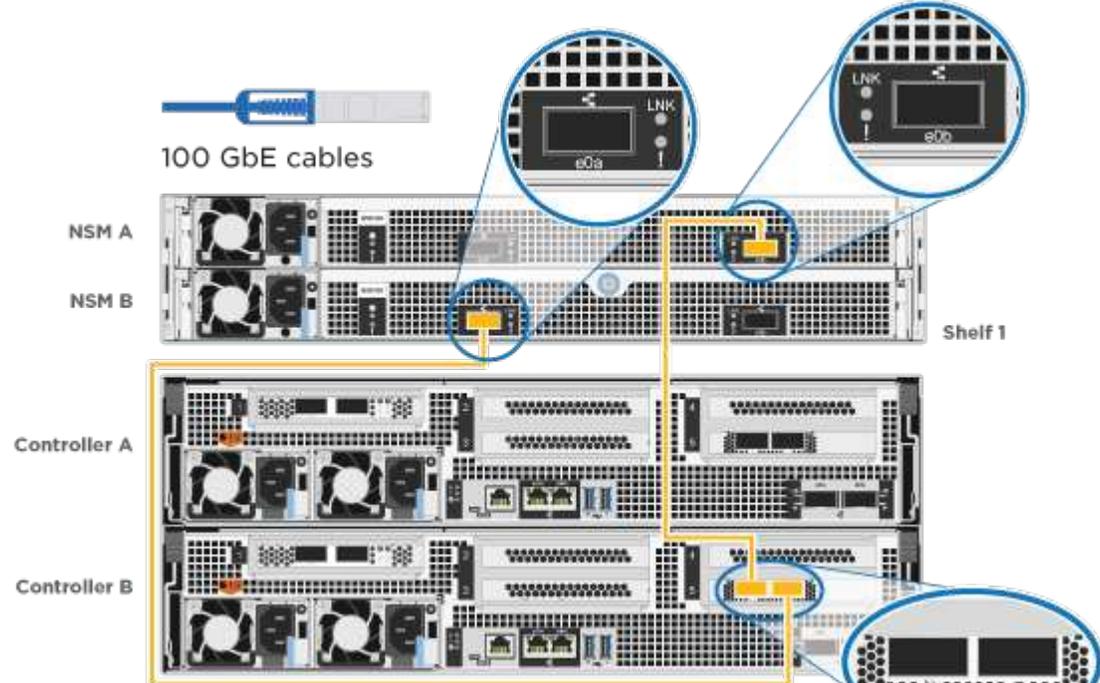

Be sure to check the illustration arrow for the proper cable connector pull-tab orientation.

As you insert the connector, you should feel it click into place; if you do not feel it click, remove it, turn it around and try again.

Use the animation or the tabulated steps to cable your controllers to a single shelf:

Animation - Cable the controllers to a single drive shelf

Step	Perform on each controller module
<b>1</b>	<p>Cable controller A to the shelf:</p>  <p>100 GbE cables</p> <p>NSM A</p> <p>NSM B</p> <p>Shelf 1</p> <p>Controller A</p> <p>Controller B</p>
<b>2</b>	<p>Cable controller B to the shelf:</p>  <p>100 GbE cables</p> <p>NSM A</p> <p>NSM B</p> <p>Shelf 1</p> <p>Controller A</p> <p>Controller B</p>

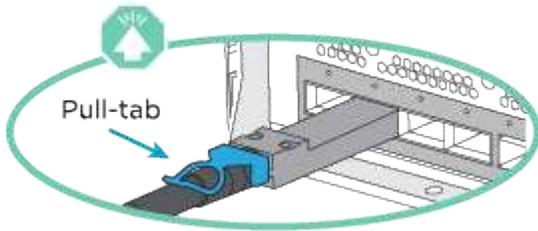

To complete setting up your system, see [Step 4: Complete system setup and configuration](#).

#### Option 4: Cable the controllers to two drive shelves

You must cable each controller to the NSM modules on both NS224 drive shelves.

#### Before you begin

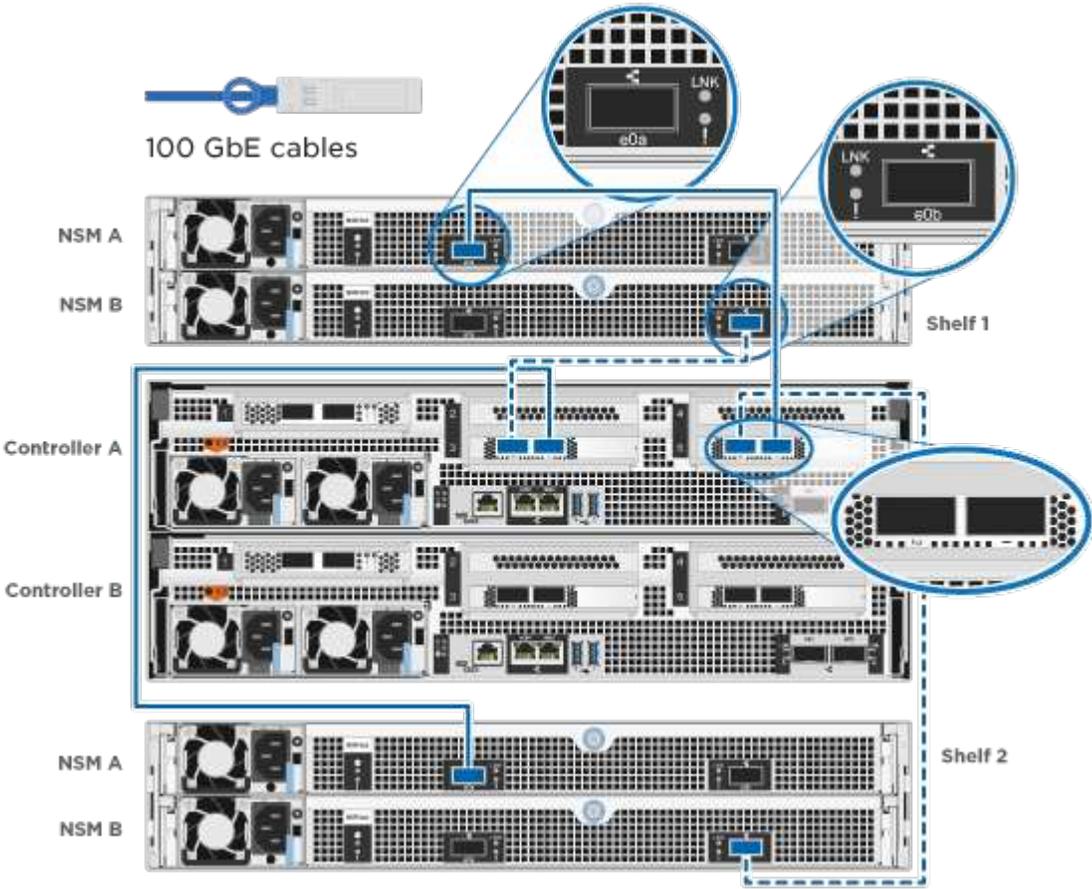

Be sure to check the illustration arrow for the proper cable connector pull-tab orientation.

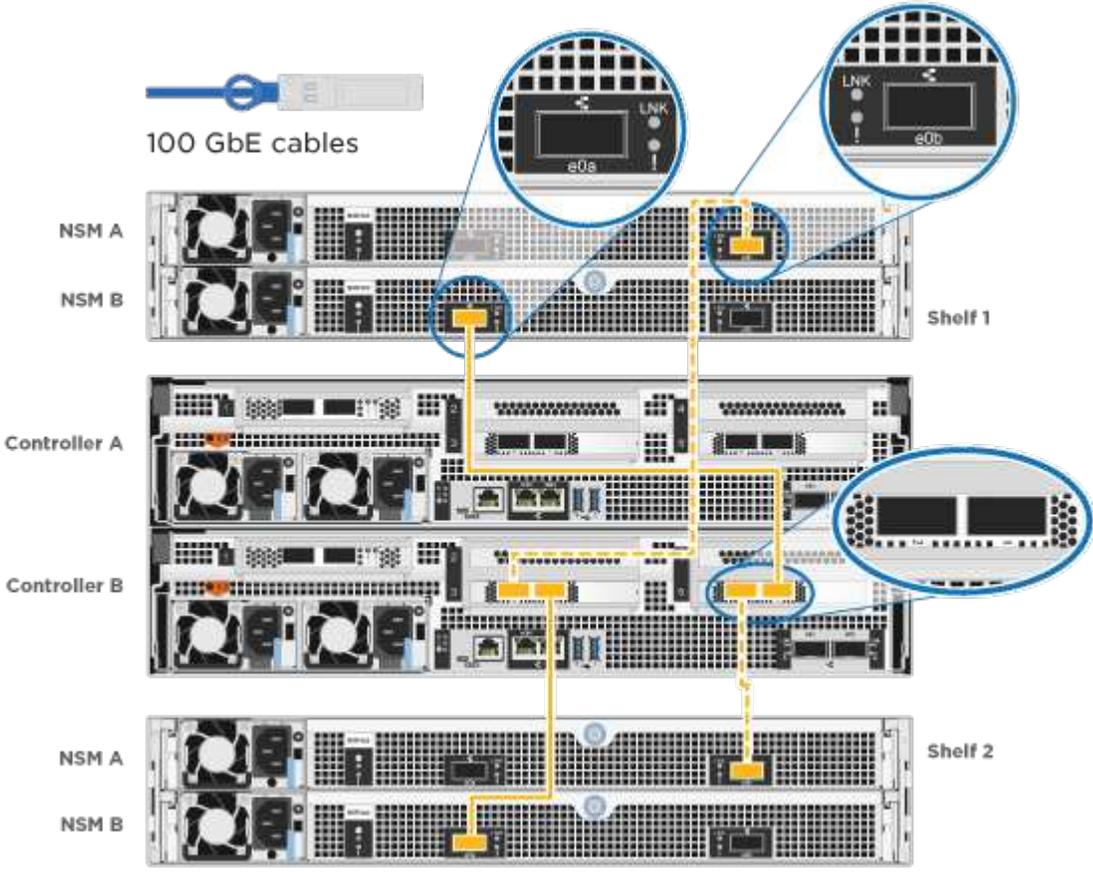

As you insert the connector, you should feel it click into place; if you do not feel it click, remove it, turn it around and try again.

Use the animation or the tabulated steps to cable your controllers to two drive shelves:

#### Animation - Cable the controllers to two drive shelves

Step	Perform on each controller module
<b>1</b>	<p data-bbox="269 905 678 936">Cable controller A to the shelves:</p>  <p data-bbox="428 1073 643 1104">100 GbE cables</p> <p data-bbox="342 1163 407 1184">NSM A</p> <p data-bbox="342 1236 407 1257">NSM B</p> <p data-bbox="1208 1257 1273 1278">Shelf 1</p> <p data-bbox="285 1373 407 1394">Controller A</p> <p data-bbox="285 1520 407 1541">Controller B</p> <p data-bbox="342 1688 407 1709">NSM A</p> <p data-bbox="342 1761 407 1782">NSM B</p> <p data-bbox="1224 1688 1289 1709">Shelf 2</p>

Step	Perform on each controller module
<div data-bbox="138 163 207 214" style="background-color: #FFC000; color: white; text-align: center; width: 40px; height: 24px; display: flex; align-items: center; justify-content: center;">2</div>	<p data-bbox="272 163 682 193">Cable controller B to the shelves:</p>  <p>The diagram illustrates the physical connection of 100 GbE cables. At the top left, a blue 100 GbE cable is shown. The main diagram shows two server racks, Shelf 1 and Shelf 2. Shelf 1 contains NSM A and NSM B modules. Shelf 2 contains NSM A and NSM B modules. Between the shelves are Controller A and Controller B modules. Yellow lines represent the 100 GbE cables connecting the network ports on Controller B to the LNK and e0a/e0b ports on the NSM modules in both shelves. Callouts provide close-up views of the LNK and e0a/e0b ports on the NSM modules and the network ports on Controller B.</p>

To complete setting up your system, see [Step 4: Complete system setup and configuration](#).

## Step 4: Complete system setup and configuration

Complete the system setup and configuration using cluster discovery with only a connection to the switch and laptop, or by connecting directly to a controller in the system and then connecting to the management switch.

### Option 1: Complete system setup and configuration if network discovery is enabled

If you have network discovery enabled on your laptop, you can complete system setup and configuration using automatic cluster discovery.

#### Steps

1. Plug the power cords into the controller power supplies, and then connect them to power sources on different circuits.

The system begins to boot. Initial booting may take up to eight minutes.

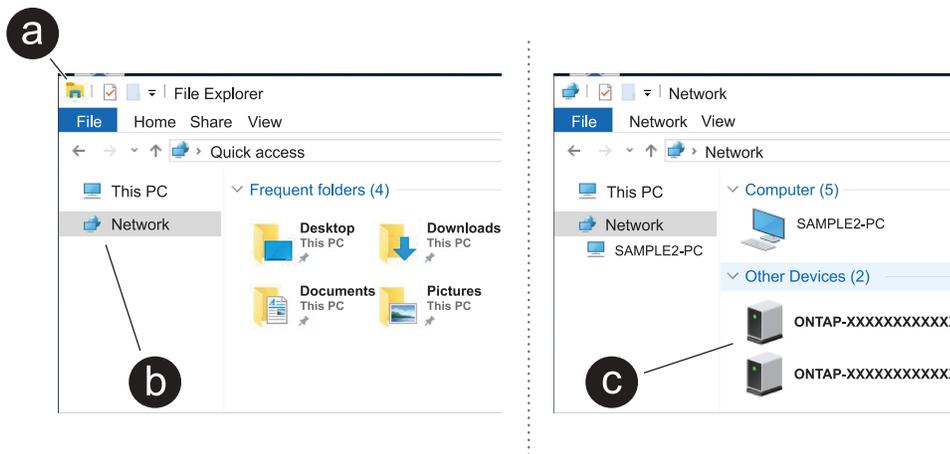

2. Make sure that your laptop has network discovery enabled.

See your laptop's online help for more information.

3. Use the animation to connect your laptop to the Management switch:

## Animation - Connect your laptop to the Management switch

4. Select an ONTAP icon listed to discover:

- a. Open File Explorer.
- b. Click **Network** in the left pane and right-click and select **refresh**.
- c. Double-click either ONTAP icon and accept any certificates displayed on your screen.

XXXXX is the system serial number for the target node.

System Manager opens.

5. Use System Manager guided setup to configure your system using the data you collected in the [ONTAP Configuration Guide](#).
6. Verify the health of your system by running Config Advisor.
7. After you have completed the initial configuration, go to [ONTAP 9 documentation](#) for information about configuring additional features in ONTAP.

### Option 2: Complete system setup and configuration if network discovery is not enabled

If network discovery is not enabled on your laptop, you must complete the configuration and setup using this task.

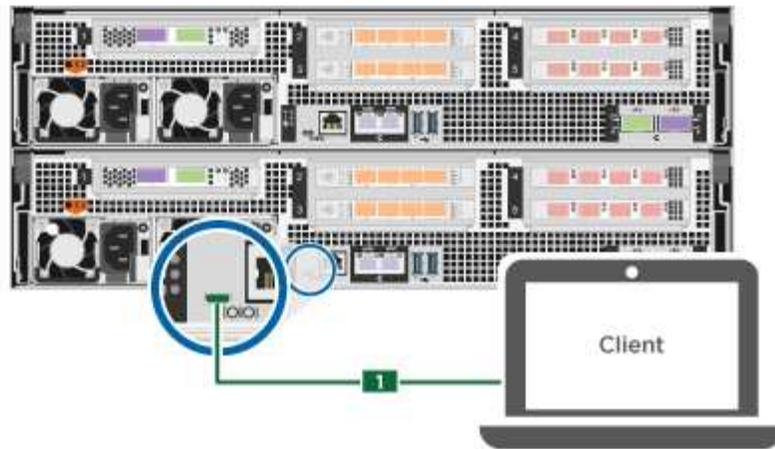

#### Steps

1. Cable and configure your laptop or console:
  - a. Set the console port on the laptop or console to 115,200 baud with N-8-1.

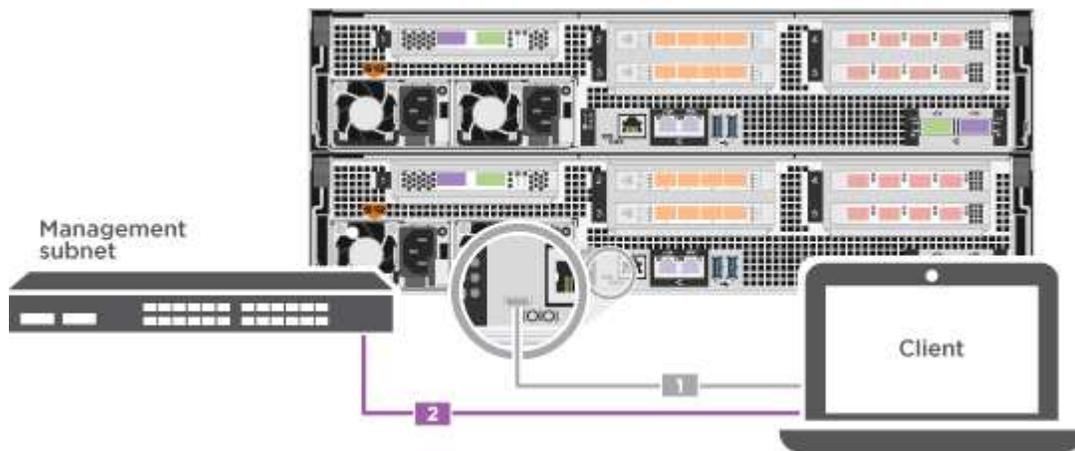

See your laptop or console's online help for how to configure the console port.

- b. Connect the console cable to the laptop or console, and connect the console port on the controller using the console cable that came with your system.

c. Connect the laptop or console to the switch on the management subnet.

d. Assign a TCP/IP address to the laptop or console, using one that is on the management subnet.

2. Plug the power cords into the controller power supplies, and then connect them to power sources on different circuits.

The system begins to boot. Initial booting may take up to eight minutes.

3. Assign an initial node management IP address to one of the nodes.

If the management network has DHCP...	Then...
Configured	Record the IP address assigned to the new controllers.
Not configured	<p>a. Open a console session using PuTTY, a terminal server, or the equivalent for your environment.</p> <div style="display: flex; align-items: center; margin: 10px 0;"> <div style="border: 1px solid black; border-radius: 50%; width: 30px; height: 30px; display: flex; align-items: center; justify-content: center; margin-right: 10px;"> <span style="font-size: 1.2em; font-weight: bold;">i</span> </div> <div> <p>Check your laptop or console's online help if you do not know how to configure PuTTY.</p> </div> </div> <p>b. Enter the management IP address when prompted by the script.</p>

4. Using System Manager on your laptop or console, configure your cluster:

a. Point your browser to the node management IP address.

The format for the address is `https://x.x.x.x`.

b. Configure the system using the data you collected in the [ONTAP Configuration Guide](#).

5. Verify the health of your system by running Config Advisor.

6. After you have completed the initial configuration, go to [ONTAP 9 documentation](#) for information about configuring additional features in ONTAP.
