Data Sources window

The Data Sources window enables you to view, edit, and delete existing data sources, create new data sources, and acquire a data source. You can access this window by selecting **Settings**, and under **Setup** click **Data Sources**.

A data source is a read-only data structure that contains information about where the data in a specific database originates from. Data sources must be defined before environments can be polled. For example, a data source can be either an OnCommand Unified Manager database that contains information about a storage environment or a VMware database with information about a data center.

- · Data Sources table
- · History table
- Toolbar

Data Sources table

The Data Sources table lists the existing data sources. You can customize the table display by using the filtering and sorting features available for each column, as well as by rearranging the column order.

- $ightharpoonup^n$ enables or disables filtering for the entire table. A red "x" appears over the icon if filtering is disabled.
- Double-clicking P clears and resets the filtering selections.
- To on each column header enables you to filter based on the content of the columns. Clicking To in a column allows you to filter on a specific item from the drop-down list or on all available items.
- Clicking the column header toggles between ascending and descending order of sorting. You can identify the applied sort order by the sort arrows (for ascending and for descending).
- To rearrange the location of columns, you can drag and drop columns to place them in any required order. However, you cannot hide or delete any of these columns.
- Clicking the **Search** filter text box allows you to search for specific content. In addition, you can search using supported operators for the applicable column type, Alphabetic or Numeric.

The following table lists the supported operators for alphabetic and numeric columns in the Data Sources table, available from the **Search** filter text box.

Alphabetic	Numeric
Contains	• Equals
Does not contain	Does not equal
Starts with	Less than
Ends with	Greater than
• Equals	Less than or equal to
Does not equal	Greater than or equal to
Reset	Between
	• Reset

The Data Sources table contains the following columns:

Name

Displays the name of the data source.

Data Source Type

Displays the data source type.

Host Name

Displays the host name or IP address of the data source.

Scheme

Displays the caching scheme associated with the data source. For example, a VM caching scheme contains data that is relevant to your virtual environment such as virtual machines, hosts, and datastores. The relevant scheme information is obtained from the data source.

Interval (minutes)

Displays the interval (in minutes) between two consecutive acquisitions of a data source.

Start Time

Displays the date and time when the data acquisition process was started.

Click the calendar icon in the **Search** filter text box to search for data sources with a specific start date.

Duration (seconds)

Displays the time (in seconds) that it takes to process the last data acquisition from the data source.

Status

Displays the status of the current data acquisition process (if any) or the last data acquisition process. The status options include the following:

- All
- Aborting
- Canceled
- · Completed
- Failed
- NoAcquisition
- Obsolete
- Pending
- Executing
- Scheduled

Message

Displays an error message when the data acquisition process encounters and error and stops.

History table

The History table displays in the header the name of the data source that was selected in the Data Source table, and lists the details of each data acquisition process for the selected data source. The list of processes is updated dynamically, as the data acquisition processes occur. You can customize the table display by using the filtering and sorting features available for each column, as well as by rearranging the column order.

- \P enables or disables filtering for the entire table. A red "x" appears over the icon if filtering is disabled.
- Double-clicking P clears and resets the filtering selections.
- To on each column header enables you to filter based on the content of the columns. Clicking To in a column allows you to filter on a specific item from the drop-down list or on all available items.
- Clicking the column header toggles between ascending and descending order of sorting. You can identify the applied sort order by the sort arrows (▲ for ascending and ▼ for descending).
- To rearrange the location of columns, you can drag and drop columns to place them in any required order. However, you cannot hide or delete any of these columns.
- Clicking the **Search** filter text box allows you to search for specific content. In addition, you can search using supported operators for the applicable column type, Alphabetic or Numeric.

The following table lists the supported operators for alphabetic and numeric columns in the History table, available from the **Search** filter text box.

Alphabetic	Numeric
Contains	• Equals
Does not contain	Does not equal
Starts with	Less than
Ends with	Greater than
• Equals	Less than or equal to
Does not equal	Greater than or equal to
Reset	Between
	Reset

The History table contains the following columns:

• ID

Displays the identification number of the data acquisition process.

The identification number is unique and is assigned by the server when it starts the data acquisition process.

Start Time

Displays the date and time when the data acquisition process was started.

Click the calendar icon in the Search filter text box to search for data acquisition processes started on a

specific date.

Duration (seconds)

Displays the length of time (in seconds) of the last acquisition process from the data source.

· Planned Acquisition

Displays the scheduled date and time for the data acquisition process.

Click the calendar icon in the **Search** filter text box to search for data acquisitions scheduled for a specific date.

Scheduling Type

Displays the type of schedule. The schedule types include the following:

- All
- Immediate
- Recurring
- Unknown

Status

Displays the status of the current data acquisition process (if any) or the last data acquisition process. The status options include the following:

- All
- Aborting
- Canceled
- · Completed
- Failed
- · Obsolete
- Pending
- · Executing
- Scheduled
- NoAcquisition

Message

Displays a message about the error that was encountered during the data acquisition process, when the process stopped and could not continue.

Toolbar

The toolbar is located above the column headers of the Data Sources table. You can use the icons in the toolbar to perform various actions. You can also perform these actions by using the right-click menu in the window.

• 📭 (New)

Opens the New Data Source dialog box, which enables you to add a new data source.

• 📴 (Edit)

Opens the Edit Data Source dialog box, which enables you to edit the selected data source.

• 📭 (Delete)

Opens the Delete Data Source confirmation dialog box, which enables you to delete the selected data source.

• 🚶 (Acquire Now)

Initiates the acquisition process for the selected data source.

(Reset Scheme)

Opens the Reset Scheme confirmation dialog box. This dialog box enables you to reset the cache storage for the selected scheme. The cache is reset during the next data acquisition process.

The reset process deletes all the cached data, including all the tables. The entire cache is built from start during the next data acquisition process.

New Data Source dialog box

The New Data Source dialog box enables you to add a new data source.

Data Source Configuration properties

Name

Enables you to specify a name for the data source.

· Data source type

Enables you to select the data source type—for example, OnCommand Unified Manager - 6.0 (MYSQL).

When you select a data source type, the port, scheme, user name, password, interval (minutes), and timeout (sec) fields are populated with data.

If you want to execute OnCommand Workflow Automation (WFA) data protection workflows from an OnCommand Unified Manager server, you must set up WFA in the OnCommand Unified Manager server.

For more information, see the OnCommand Unified Manager Online Help.

Host name

Enables you to specify the host name or IP address (IPv4 or IPv6) for the data source.

The OnCommand Unified Manager data source type does not support IPv6 addresses.

Port

Displays the associated port number, if any, for the selected data source type.

You can change the default port and specify a different port for the data source.

Scheme

Displays the scheme associated with the selected data source type—for example cm_storage for OnCommand Unified Manager - 6.0 (MYSQL).

This property cannot be modified.

User name

Displays the associated user name, if any, for the selected data source type.

You must specify the appropriate user name for this data source to override the default user name:

- For OnCommand Unified Manager versions earlier than 6.0, you must enter the user name that you
 used for overriding the default credentials while running ocsetup.
- For OnCommand Unified Manager 6.0 and later, you must enter the user name of the database user account that you created on the OnCommand Unified Manager server.
- For Performance Advisor, you must enter the user name of an OnCommand Unified Manager user with a minimum role of GlobalRead.

Password

Enables you to specify a password for the selected data source type.

You must specify a password to override the default password for the user name of this data source:

- For OnCommand Unified Manager versions earlier than 6.0, you must enter the password that you used for overriding the default credentials while running ocsetup.
- For OnCommand Unified Manager 6.0 and later, you must enter the password of the database user account that you created on the OnCommand Unified Manager server.
- For Performance Advisor, you must enter the password of an OnCommand Unified Manager user with a minimum role of GlobalRead.

Database

Interval (minutes)

Enables you to click the value and select an interval (in minutes) using the up and down arrows.

If the interval is set to zero (0), automatic sampling is disabled.

The default interval for data sampling is:

- Script-based data source type: 1440 (performance and vc)
- SQL-based data source type: 30 (cm_storage, storage, and cm_performance)

See Setup Instruction Guide

Opens the Setup Instruction Guide dialog box, which enables you to specify the instructions for setting up the data source.

Command buttons

Save

Saves the configurations settings and closes the dialog box.

Cancel

Cancels changes, if any, and closes the dialog box.

Edit Data Source dialog box

The Edit Data Source dialog box enables you to modify an existing data source.

Data Source Configuration properties

Name

Enables you to modify the name of the data source.

· Data source type

Displays the data source type for the data source. You cannot modify this field.

Host name

Enables you to specify the host name or IP address (IPv4 or IPv6) for the data source.

The OnCommand Unified Manager data source type does not support IPv6 addresses.

Port

Displays the associated port number, if any, for the selected data source type. You can change the default port number for the data source.

Scheme

Displays the scheme associated with the selected data source type—for example *cm_storage* for Unified Manager - 6.0 (MYSQL).

You cannot modify this property.

User name

Displays the associated user name, if any, for the selected data source type.

You must specify the appropriate user name for this data source to override the default user name:

- For Unified Manager versions earlier than 6.0, you must enter the user name that you used for overriding the default credentials while running ocsetup.
- For Unified Manager 6.0 and later, you must enter the user name of the database user account that you created on the Unified Manager server.
- For Performance Advisor, you must enter the user name of an OnCommand Unified Manager user with a minimum role of GlobalRead.

Password

Enables you to specify a password for the selected data source type.

You must specify a password to override the default password for the user name of this data source:

- For Unified Manager versions earlier than 6.0, you must enter the password that you used for overriding the default credentials while running ocsetup.
- For Unified Manager 6.0 and later, you must enter the password of the database user account that you created on the server.
- For Performance Advisor, you must enter the password of an Unified Manager user with a minimum role of GlobalRead.

Database

Displays the associated database name, if any, for the selected data source type.

Interval (minutes)

Enables you to click the value and select an interval (in minutes) using the up and down arrows.

If the interval is set to zero (0), automatic sampling is disabled.

The default interval for data sampling is:

- Script based data source type: 1440 (performance and vc)
- SQL based data source type: 30 (cm_storage, storage, and cm_performance)

See Setup Instruction Guide

Opens the Setup Instruction Guide dialog box, which outlines the steps for setting up the data source.

Command buttons

Reset Scheme

Opens the Reset Scheme confirmation dialog box. This dialog box enables you to reset the cache storage for the selected scheme, which occurs during the next data acquisition.

The reset process deletes all the cached data, including all the tables. The entire cache is built from start during the next data acquisition.

Save

Saves the configurations settings and closes the dialog box.

Cancel

Cancels changes, if any, and closes the dialog box.
