Active IQ® Unified Manager 9.6
Quick Start Guide
For Windows Installations

System requirements

- Operating system: Microsoft Windows Server 2016 and 2019 64-bit Standard and Datacenter Editions
- RAM: 12 GB
- CPU: 9572 MHz total
- Free disk space: 100 GB of disk space for the installation directory, 50 GB of disk space for the MySQL data directory

For detailed system requirements, see the [Unified Manager Installation Guide](#) and [Interoperability Matrix](#).

Installing Active IQ Unified Manager

Download the installer

1. Download the `ActiveIQUnifiedManager-<version>.exe` installation package.
2. Copy the installation file to a directory on the target system.

Install Unified Manager

Microsoft .NET 4.5.2, or greater, must be installed. Unified Manager installs other required third-party packages as part of the installation. If you need more information on the dependent software packages, see the [Unified Manager Installation Guide](#).

1. Log in to Windows using the default local administrator account.
2. In the directory where you downloaded the installation file, right-click and run the Unified Manager executable (.exe) file as an administrator.
3. When prompted, enter the user name and password to create the Unified Manager maintenance user.
4. In the Database Connection wizard, enter the MySQL root password.
5. Follow the remaining prompts to complete the installation.
6. Click **Finish** at the end of the installation and the Unified Manager web UI is displayed.
