View system details

View inventory details

The **Inventory** widget provides you with a rollup of the total systems that you own. This includes both Active IQ enabled and non-enabled products.

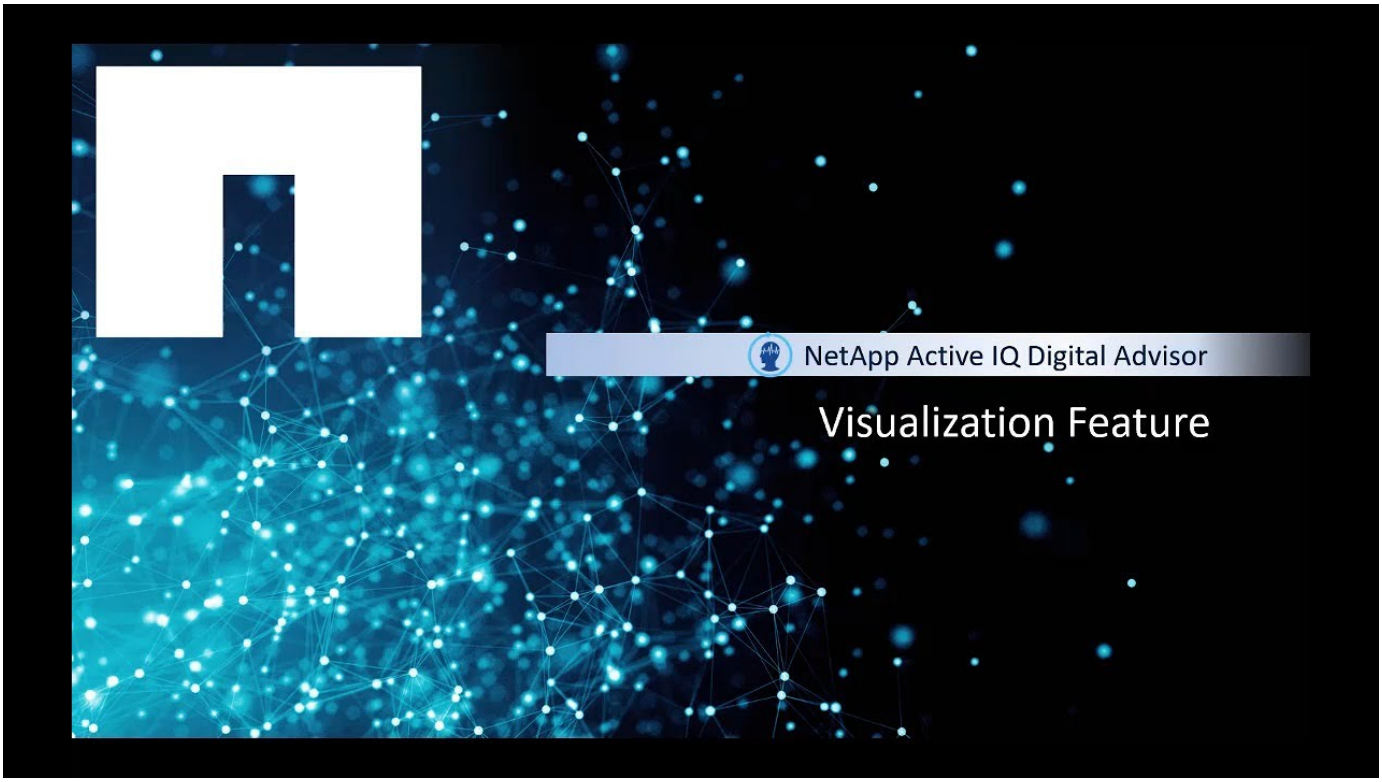
You can also generate the report of the selected watchlist and email the report to a maximum of 5 recipients.

Steps

1. In the **Inventory** widget, click **Systems** to view the system information of all platforms or click the platform type and then click **Systems** to view systems specific to that platform.
2. Click the node or cluster to view detailed information about the system.

View cluster and node configuration

The ClusterViewer enables you to view detailed physical and logical configuration information. The details are presented in several easy-to-view tables across multiple tabs that include a summary of the cluster and node configuration, the local tier and volume information, the network interface and port information, a stack diagram detailing information about the disks and shelves, and a few cable visualizations. You can also download the cable visualization graphics in the SVG format.



Steps

1. At the cluster level, click **View Details** next to the **Cluster Configuration** widget.
2. Click the **Visualization** tab to view a graphical representation of the cluster.

View valuable insights

The **Valuable Insights** widget provides information about the number of support cases, pending software upgrades, storage efficiency savings, risks mitigated, and others. It also proactively lists the risk notifications from the **Wellness** attribute.

Steps

1. In the **Inventory** widget, click **Systems** to view the system information of all platforms or click the platform type and then click **Systems** to view systems specific to that platform.
2. Click the node or cluster to view detailed information about the system.

   The **Valuable Insights** widget is available on the dashboard.

3. Review the information in the widget to understand the business and technical value received from your support contract.

View Keystone capacity utilization

If you are subscribed to the Keystone Flex Subscription Service, you can view the Keystone widget on the Active IQ Digital Advisor Dashboard.

The widget provides you a summary of the consumed capacity for your account. You can view the capacity utilization charts with respect to the committed capacity, the snapshot being rounded up to the last five minutes. The utilization over and above the committed capacity (the burst capacity) is marked in red.

You can view the **Keystone - Capacity Utilization** dashboard, which analyzes the data in the widget and graphically represents the utilization trend of the capacity and usage for all the subscribed storage services tiers, such as premium, extreme, and standard, associated with your Keystone account.

You can view the Keystone service capacity and usage of each subscribed service for your block, file services, or object storage on the dashboard. Capacity utilization is represented in a concentric circle having three centric rings: the inner ring displays the committed capacity, the middle ring indicates the burst capacity, and the outer ring the consumed capacity. The consumed capacity for a specific date and time within the selected time range is indicated by a blue line graph.

Steps

1. Click **View Details** to view the utilization trend in the detailed **Keystone - Capacity Utilization** dashboard.
2. Select either 30 days, 7 days, or 1 day to view the recent average usage trend.
