Manage host groups

Create host groups on your ASA r2 system

On an ASA r2 system, a *host group* is the mechanism used to give hosts access to storage units. A host group refers to an igroup for SCSI hosts or to an NVMe subsystem for NVMe hosts. A host can only see the storage units that are mapped to the host groups to which it belongs. When a host group is mapped to a storage unit, the hosts that are members of the group, are then able to mount (create directories and file structures on) the storage unit.

Host groups are automatically or manually created when you create your storage units. You can optionally use the following steps to create host groups before or after storage unit creation.

Steps

1. From System Manager, select **Host**.
2. Select the hosts you want to add to the host group.

After you select the first host, the option to add to a host group appears above the list of hosts.

3. Select **Add to host group**.
4. Search for and select the host group to which you want to add the host.

What's next?

You have created a host group and you can now [map it to a storage unit](#).

Delete a host group on your ASA r2 system

On an ASA r2 system, a host group is the mechanism used to give hosts access to storage units. A host group refers to an igroup for SCSI hosts or to an NVMe subsystem for NVMe hosts. A host can only see the storage units that are mapped to the host groups to which it belongs. You might want to delete a host group if you no longer want the hosts in the group to have access to the storage units that are mapped to the group.

Steps

1. In System Manager, select **Storage**.
2. Under **Host mapping** select the host group you want to delete.
3. Select **Mapped storage**.
4. Select **More**; then select **Delete**.
5. Select to verify that you want to continue; then select **Delete**.

What's next?

The host group is deleted. The hosts that were in the group no longer have access to the storage units that were mapped to the host group.
