Change the Google Cloud machine type for Cloud Volumes ONTAP

You can choose from several machine types when you launch Cloud Volumes ONTAP in Google Cloud. You can change the instance or machine type at any time if you determine that it is undersized or oversized for your needs.

About this task
• Automatic giveback must be enabled on a Cloud Volumes ONTAP HA pair (this is the default setting). If it isn’t, then the operation will fail.

ONTAP 9 Documentation: Commands for configuring automatic giveback

• Changing the machine type can affect Google Cloud service charges.
• The operation restarts Cloud Volumes ONTAP.

For single node systems, I/O is interrupted.

For HA pairs, the change is nondisruptive. HA pairs continue to serve data.

BlueXP gracefully changes one node at a time by initiating takeover and waiting for give back. NetApp’s QA team tested both writing and reading files during this process and didn’t see any issues on the client side. As connections changed, we did see retries on the I/O level, but the application layer overcame these short "re-wire" of NFS/CIFS connections.

Steps
1. On the Canvas page, select the working environment.
2. On the Overview tab, click the Features panel and then click the pencil icon next to Machine type.
a. If you are using a node-based PAYGO license, you can optionally choose a different license and machine type by clicking the pencil icon next to **License type**.

3. Choose an machine type, select the check box to confirm that you understand the implications of the change, and then click **Change**.

**Result**
Cloud Volumes ONTAP reboots with the new configuration.
