# Release notes

## What's new with StorageGRID management

Learn what's new with managing StorageGRID systems in the NetApp Console.

### 06 October 2025

#### BlueXP is now NetApp Console

The NetApp Console, built on the enhanced and restructured BlueXP foundation, provides centralized management of NetApp storage and NetApp Data Services across on-premises and cloud environments at enterprise grade—delivering real-time insights, faster workflows, and simplified administration, that is highly secure and compliant.

For details on what has changed, see the [NetApp Console release notes](#).

### 12 May 2025

#### NetApp Console access roles needed

You now need one of the following access roles to view, discover or manage StorageGRID in NetApp Console: **Organization admin, Folder or project admin, Storage admin, or Storage health specialist**. [Learn about NetApp Console access roles](#).

### 07 August 2024

#### New advanced view

Starting with StorageGRID 11.8, you can use the familiar Grid Manager interface to manage your StorageGRID system from BlueXP.

[Learn how to administer StorageGRID using the advanced view](#).

#### Ability to review and approve StorageGRID management interface certificate

You now have the ability to review and approve a StorageGRID management interface certificate when discovering the StorageGRID system from BlueXP. You can also review and approve the latest StorageGRID management interface certificate on a discovered grid.

[Learn how to review and approve the server certificate during system discovery](#).

### 18 September 2022

#### Support for StorageGRID

You can now discover your StorageGRID systems directly from BlueXP. Discovering StorageGRID provides you with a complete view of data across your hybrid multicloud.

# Known issues for managing StorageGRID in NetApp Console

Known issues identify problems that might prevent you from using this release of the product successfully.

## Updated display names don't appear in the NetApp Console

If you use the rename procedure to define a new display name for a site or grid, the new display name isn't reflected in the NetApp Console. Within the NetApp Console, the system continues to show the system name and not the new display name.

## Error when filtering alerts

When using the advanced view, filtering the contents of the Alerts page results in an error.

## Error when editing grid federation connection

When using the advanced view, you might encounter a gateway timeout error when editing a grid federation connection.
