Reference

Supported S3 storage classes and regions

BlueXP tiering supports several S3 storage classes and most regions.

Supported S3 storage classes

When you set up data tiering to AWS from your on-premises ONTAP systems, BlueXP tiering automatically uses the *Standard* storage class for your inactive data. BlueXP tiering can apply a lifecycle rule so the data transitions from the *Standard* storage class to another storage class after a certain number of days. You can choose from the following storage classes:

- Standard-Infrequent Access (S3 Standard-IA)
- One Zone-Infrequent Access (S3 One Zone-IA)
- Intelligent-Tiering (S3 Intelligent-Tiering)
- Glacier Instant Retrieval

If you do not choose another storage class, then the data remains in the *Standard* storage class and no rules are applied.

When you configure a BlueXP tiering lifecycle rule, you must not configure any lifecycle rules when setting up the bucket in your AWS account.

[Learn about S3 storage classes.](#)

Supported AWS regions

BlueXP tiering supports the following AWS regions.

Asia Pacific

- Mumbai
- Seoul
- Singapore
- Sydney
- Tokyo

Europe

- Frankfurt
- Ireland
- London
- Paris
- Stockholm

North America

- Canada Central
- US East (N. Virginia)
- US East (Ohio)
- US West (N. California)
- US West (Oregon)

South America

- São Paulo

Supported Azure Blob access tiers and regions

BlueXP tiering supports two access tiers and most regions.

Supported Azure Blob access tiers

When you set up data tiering to Azure from your on-premises ONTAP systems, BlueXP tiering automatically uses the *Hot* access tier for your inactive data. BlueXP tiering can apply a lifecycle rule so the data transitions from the *Hot* access tier to the *Cool* access tier after a certain number of days.

If you do not choose the *Cool* access tier, then the data remains in the *Hot* access tier and no rules are applied.

When you configure a BlueXP tiering lifecycle rule, you must not configure any lifecycle rules when setting up the container in your Azure account.

[Learn about Azure Blob access tiers.](#)

Supported Azure regions

BlueXP tiering supports tiering to any storage account in any region that can be accessed via the Connector.

Supported Google Cloud storage classes and regions

BlueXP tiering supports several Google Cloud storage classes and most regions.

Supported GCP storage classes

When you set up data tiering to GCP from your on-premises ONTAP systems, BlueXP tiering automatically uses the *Standard* storage class for your inactive data. BlueXP tiering can apply a lifecycle rule so the data transitions from the *Standard* storage class to other storage classes after a certain number of days. You can choose from the following storage classes:

- Nearline
- Coldline
- Archive

If you do not choose another storage class, then the data remains in the *Standard* storage class and no rules

are applied.

When you configure a BlueXP tiering lifecycle rule, you must not configure any lifecycle rules when setting up the bucket in your Google account.

[Learn about Google Cloud Storage classes.](#)

Supported Google Cloud regions

BlueXP tiering supports the following regions.

Americas

- Iowa
- Los Angeles
- Montreal
- N. Virginia
- Oregon
- Sao-Paulo
- South Carolina

Asia Pacific

- Hong Kong
- Mumbai
- Osaka
- Singapore
- Sydney
- Taiwan
- Tokyo

Europe

- Belgium
- Finland
- Frankfurt
- London
- Netherlands
- Zurich
