Release notes

What's new with on-premises ONTAP clusters in the NetApp Console

Learn what's new with on-premises ONTAP cluster management in the NetApp Console.

08 December 2025

Unresolved directive in whats-new.adoc - include::_whatsnew/2025-12-08.adoc[]

06 October 2025

BlueXP is now NetApp Console

The NetApp Console, built on the enhanced and restructured BlueXP foundation, provides centralized management of NetApp storage and NetApp Data Services across on-premises and cloud environments at enterprise grade—delivering real-time insights, faster workflows, and simplified administration, that is highly secure and compliant.

For details on what has changed, see the [NetApp Console release notes](#).

12 May 2025

BlueXP access role needed

You now need one of the following access roles to view, discover or manage on-prem ONTAP clusters: Organization admin, Folder or project admin, Storage admin, or System health specialist. [Learn about access roles](#).

26 November 2024

Support for ASA r2 systems with private mode

You can now discover NetApp ASA r2 systems when using BlueXP in private mode. This support is available starting with the 3.9.46 private mode release of BlueXP.

- [Learn more about ASA r2 systems](#)
- [Learn about BlueXP deployment modes](#)

7 October 2024

Support for ASA r2 systems

You can now discover NetApp ASA r2 systems in BlueXP when using BlueXP in standard mode or restricted mode. After you discover a NetApp ASA r2 system and open the working environment, you're brought directly to System Manager.

No other management options are available with ASA r2 systems. You can't use the Standard view and you can't enable BlueXP services.

Discovery of ASA r2 systems is not supported when using BlueXP in private mode.

- [Learn more about ASA r2 systems](#)
- [Learn about BlueXP deployment modes](#)

22 April 2024

Volume templates no longer supported

You can no longer create a volume from a template. This action was associated with the BlueXP remediation service, which is no longer available.

30 July 2023

Create FlexGroup volumes

If you're managing a cluster with a Connector, you can now create FlexGroup volumes using the BlueXP API.

- [Learn how to create a FlexGroup volume](#)
- [Learn what a FlexGroup volume is](#)

2 July 2023

Cluster discovery from My estate

You can now discover on-premises ONTAP clusters from **Canvas > My estate** by selecting a cluster that BlueXP pre-discovered based on the ONTAP clusters that are associated with the email address for your BlueXP login.

[Learn how to discover clusters from the My estate page.](#)

4 May 2023

Enable BlueXP backup and recovery

Beginning with ONTAP 9.13.1, you can use System Manager (advanced view) to enable BlueXP backup and recovery if you discovered the cluster using a Connector. [Learn more about enabling BlueXP backup and recovery](#)

Upgrade ONTAP version image and hardware firmware

Beginning with ONTAP 9.10.1, you can use System Manager (advanced view) to upgrade the ONTAP version image and hardware firmware. You can choose to receive automatic upgrades to stay up to date, or you can make manual updates from your local machine or a server that can be accessed using BlueXP. [Learn more about upgrading ONTAP and firmware](#)

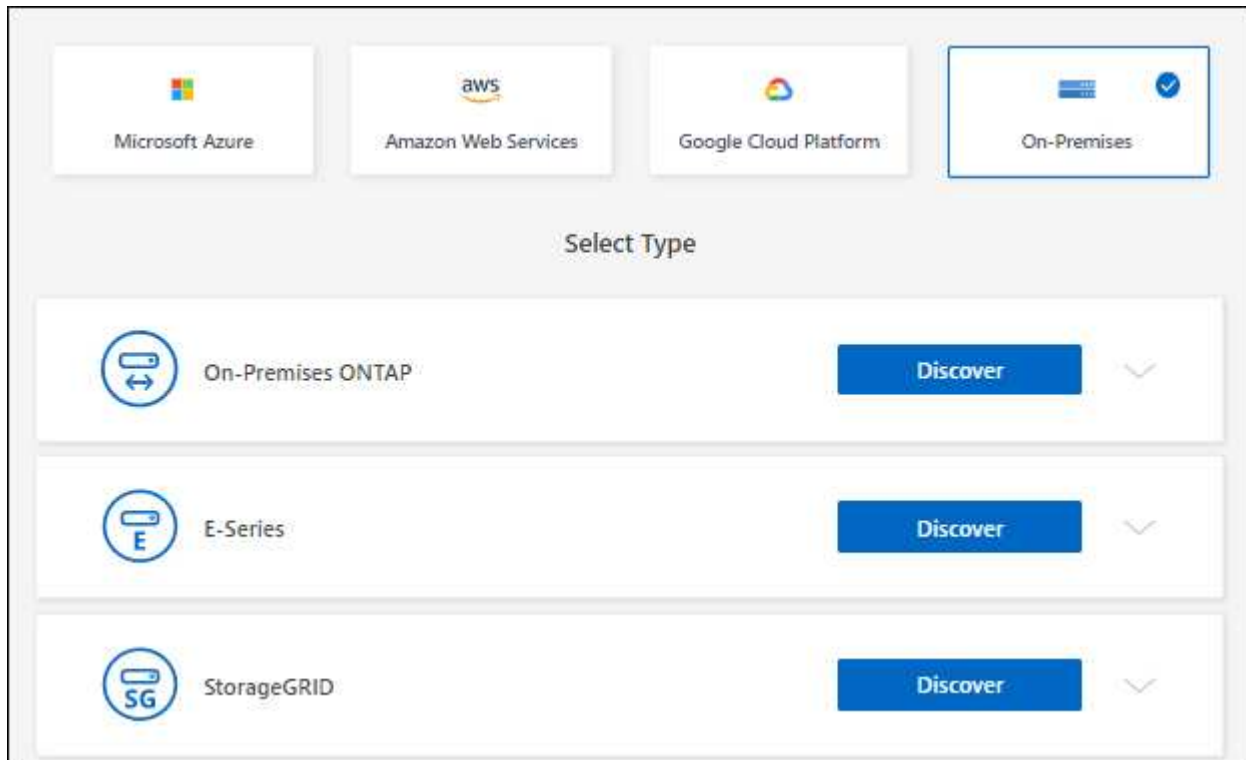

If you do *not* have a Connector, you cannot make updates from your local machine, only from a server that can be accessed using BlueXP.

3 April 2023

Single discovery option from the BlueXP console

When you discover an on-prem ONTAP cluster from the BlueXP console, you'll now see a single option:

Previously, there were separate flows for direct discovery and for discovery with a Connector. Both of those options are still available, but merged into a single flow.

When you start the discovery process, BlueXP discovers the cluster as follows:

- If you have an active Connector that has a connection to your ONTAP cluster, BlueXP will use that Connector to discover and manage the cluster.
- If you don't have a Connector or if your Connector doesn't have a connection to the ONTAP cluster, then BlueXP will automatically use the direct discovery and management option.

[Learn more about the discovery and management options.](#)

1 January 2023

Save ONTAP credentials

When you open an on-premises ONTAP working environment that was discovered directly without using a Connector, you now have the option to save your ONTAP cluster credentials so that you don't need to enter them each time that you open the working environment.

[Learn more about this option.](#)

4 December 2022

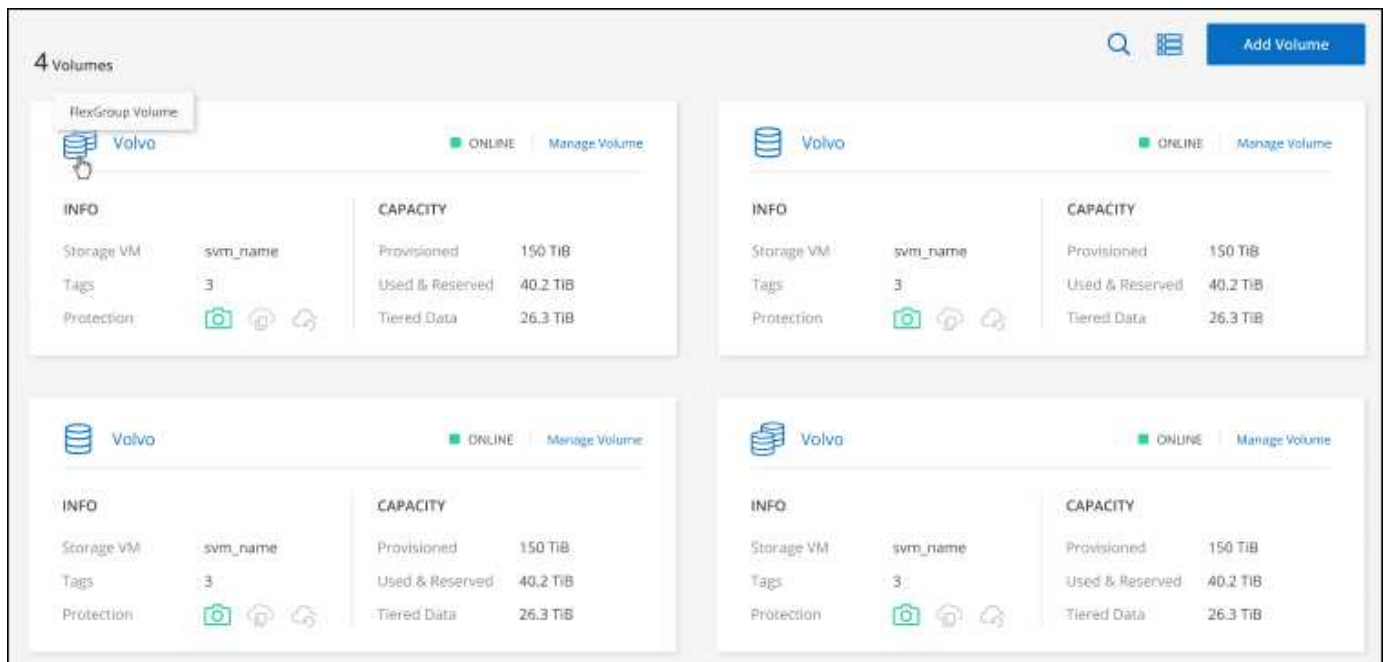

New way to discover on-premises ONTAP clusters

You can now directly discover your on-premises ONTAP clusters without using a Connector. This option enables cluster management through System Manager only. You can't enable any BlueXP data services on this type of working environment.

[Learn more about this discovery and management option.](#)

FlexGroup volumes

For on-premises ONTAP clusters that are discovered through a Connector, the Standard view in BlueXP now shows the FlexGroup volumes that were created through System Manager or the ONTAP CLI. You can also manage these volumes by cloning them, editing their settings, deleting them, and more.

The screenshot displays the BlueXP interface for managing FlexGroup volumes. At the top, it shows '4 Volumes' and an 'Add Volume' button. Below, four volume cards are arranged in a 2x2 grid. Each card represents a 'Volvo' FlexGroup Volume, which is currently 'ONLINE'. The cards provide detailed information for each volume, including its storage VM, tags, protection status, and capacity details.

Section	Field	Value
INFO	Storage VM	svm_name
	Tags	3
	Protection	[Icons]
CAPACITY	Provisioned	150 TiB
	Used & Reserved	40.2 TiB
	Tiered Data	26.3 TiB

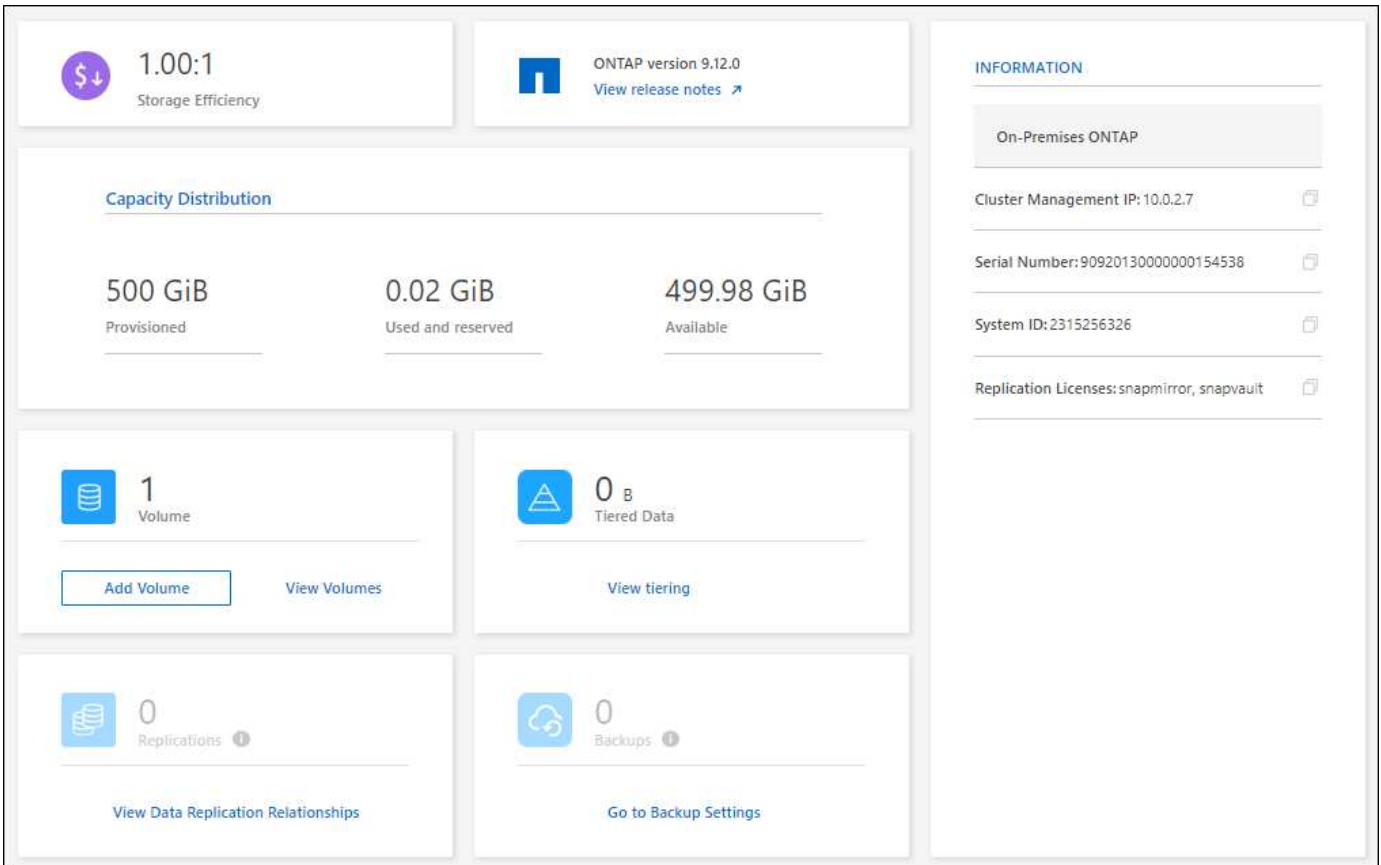

BlueXP does not support creating FlexGroup volumes. You'll need to continue using System Manager or the CLI to create FlexGroup volumes.

18 September 2022

New Overview page

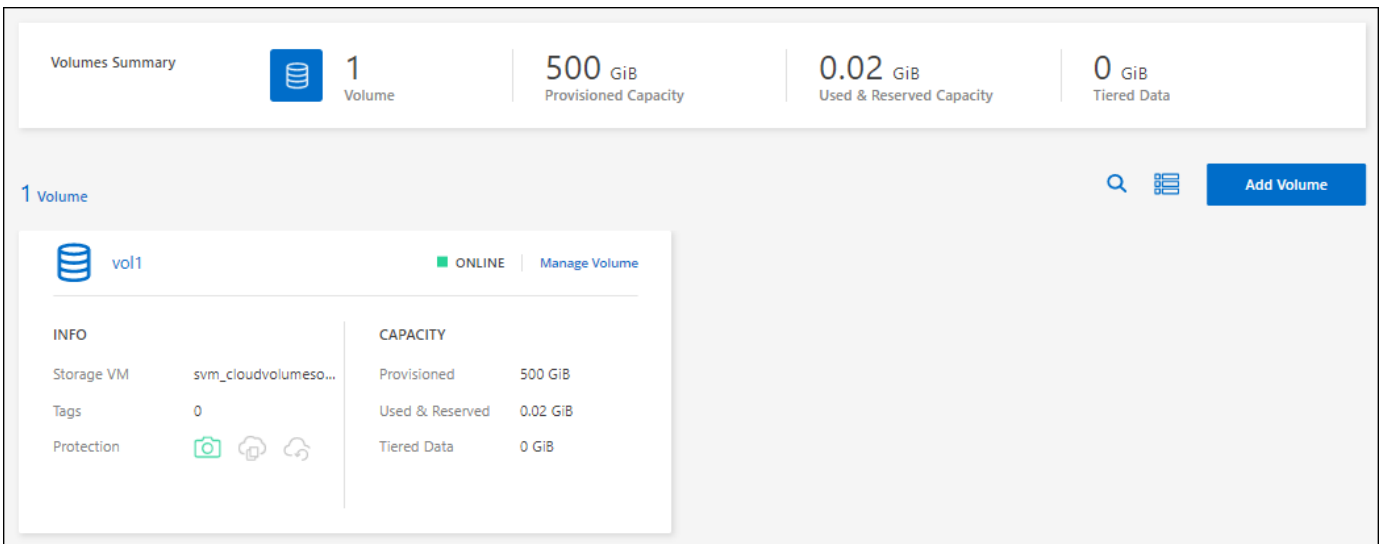

We've introduced a new Overview page to provide key details about an on-premises ONTAP cluster. For example, you can now view details like storage efficiency, capacity distribution, and system information.

You can also view details about integration with other BlueXP services that enable data tiering, data replication, and backups.

Redesigned Volumes page

We redesigned the Volumes page to provide a summary of the volumes on a cluster. The summary shows you the total number of volumes, the amount of provisioned capacity, used and reserved capacity, and the amount of tiered data.

7 June 2022

New Advanced View

If you need to perform advanced management of an ONTAP on-premises cluster, you can do so using ONTAP

System Manager, which is a management interface that's provided with an ONTAP system. We have included the System Manager interface directly inside Cloud Manager so that you don't need to leave Cloud Manager for advanced management.

This Advanced View is available as a Preview with on-premises ONTAP clusters running 9.10.0 or later. We plan to refine this experience and add enhancements in upcoming releases. Please send us feedback by using the in-product chat.

- [Learn how to manage clusters discovered directly](#)
- [Learn how to manage clusters discovered with a Connector](#)

27 February 2022

An "On-Premises ONTAP" tab is available in the Digital Wallet

Now you can view an inventory of your on-premises ONTAP clusters along with their hardware and service contracts expiration dates. Additional details about the clusters are also available.

[Learn how to view this important on-prem cluster information.](#) You'll need to have a NetApp Support Site account (NSS) for the clusters, and the NSS credentials will need to be attached to your Cloud Manager account.

11 January 2022

Tags that you add to volumes on on-premises ONTAP clusters can be use with the Tagging service

Tags that you add to a volume are now associated with the tagging feature of the Application Templates service, which can help you organize and simplify the management of your resources.

Known limitations of managing on-premises ONTAP clusters in NetApp Console

Known limitations identify platforms, devices, or functions that are not supported by this release of the product, or that do not interoperate correctly with it. Review these limitations carefully.

Limitations related to ASA r2 systems

After discovering a NetApp ASA r2 system, you are directed to System Manager.

No other management options are available with ASA r2 systems. You can't use the Standard view and you can't enable NetApp data services.

[Learn more about ASA r2 systems](#)

Unsupported clusters

On-premises ONTAP clusters that are configured with SAML authentication are not supported with the Console.

System Manager limitations

The following System Manager features are not supported from the Console:

- Cluster setup

After you set the management IP address and configure the admin password on an on-premises ONTAP cluster, you can discover the cluster in the Console.

- Role-based access control (Console agent only)

Role-based access control from System Manager is not supported when discovering and managing an on-premises ONTAP cluster using a Console agent. You are prompted to enter your admin credentials during the discovery process. Those credentials are used for all actions taken from System Manager.

With the direct discovery option, you're prompted to log in with your ONTAP credentials each time that you open the system in the Console.

- NetApp Backup and Recovery activation

The cluster version must be 9.13.1 to enable Backup and Recovery from System Manager.

If you did *not* discover a cluster using a Console agent, then you can't use System Manager (advanced view) to enable Backup and Recovery. However, you can enable Backup and Recovery on an on-premises cluster directly from the Console. [Learn how to get started](#)

- On-demand upgrades

On-demand upgrades of firmware and software are not available if the cluster version is ONTAP 9.9.1 or earlier.

If you do *not* have a Console agent, you cannot make updates from your local machine, only from a server that can be accessed using the Console.
