Learn about ONTAP alerts

View issues or potential risks in your NetApp on-premises ONTAP systems using the NetApp Console. You can drill into details using ONTAP System Manager.

NetApp Console

View ONTAP alerts in the NetApp Console.

The NetApp Console provides centralized management of NetApp storage and data services across on-premises and cloud environments at enterprise grade. The Console is required to access and use NetApp data services. As a management interface, it enables you to manage many storage resources from one interface. Console administrators can control access to storage and services for all systems within the enterprise.

You don't need a license or subscription to start using the NetApp Console and you only incur charges when you need to deploy Console agents in your cloud to ensure connectivity to your storage systems or NetApp data services. However, some NetApp data services accessible from the Console are licensed or subscription-based.

Learn more about the [NetApp Console](#).

What you can do with ONTAP alerts

View ONTAP alerts to stay informed about risks or potential risk in your ONTAP storage system. You can see some non-EMS alerts and some EMS alerts. You can see information about these severities and impact areas:

- **Severities:** Critical, Warning, Informational
- **Impact areas:** Capacity, Performance, Protection, Availability, Security, Configuration

 The Notifications option in the upper right of the NetApp Console UI monitors the status of operations that NetApp Console is performing to help you identify issues that you need to address. You can have these notifications sent to your email. The Notifications option does not include the alerts from ONTAP alerts.

Benefits of monitoring ONTAP alerts

Monitoring ONTAP alerts provides the following benefits:

- Get alerts about your ONTAP storage across clusters.
- View alerts in the same NetApp Console UI that you use for other services.
- Drill into alerts on ONTAP clusters — start from the NetApp Console and see details in ONTAP System Manager.

Cost

You can view ONTAP alerts with a NetApp ONTAP license.

Licensing

Viewing ONTAP alerts requires a NetApp ONTAP 9.10 or greater license.

You do not need to have a trial license.

ONTAP alerts can be viewed in the NetApp Console standard (public) mode only.

How ONTAP alerts work

ONTAP alerts is a core component of NetApp Console. ONTAP alerts monitors ONTAP clusters and receives alert data from ONTAP.

ONTAP alerts is available only in the NetApp Console SaaS environment. It is not available in a local Console agent UI.

Supported systems and data sources

Use ONTAP alerts to check on issues in the following systems and data sources.

Systems supported

An on-premises ONTAP NAS or SAN system is supported.

Cloud Volumes ONTAP systems are not supported at this time.

Data sources supported

View alerts regarding certain events that occur in ONTAP. They are a combination of EMS and metric-based alerts.

ONTAP alerts prerequisites

Get started with ONTAP alerts by verifying the readiness of your operational environment.

To view ONTAP alerts, you'll need these prerequisites:

- ONTAP 9.10 and later. The on-premises system must be discovered in the NetApp Console Systems page.
 - Cluster admin ONTAP permissions

The license does not need to be entered in NetApp Console digital wallet.

- In NetApp Console:
 - A NetApp Console system with NetApp on-premises NAS or SAN storage
 - A Console agent for an on-premises region must be set up in NetApp Console. Refer to [NetApp Console documentation to configure the Console agent](#).

If a cluster is removed from the Console agent, the alerts related to that cluster remain for 90 days. Also, if you change the Console agent, the alerts remain associated with the original cluster and agent for 90 days. If you return to the original agent, you will again see those alerts.

- A NetApp Console organization with at least one active Console agent connecting to on-premises ONTAP clusters. All source and systems must be in the same NetApp Console organization.

- A NetApp Console user in that organization with Organization Admin privileges for discovering resources
- [Standard NetApp Console requirements](#)

Quick start for ONTAP alerts

Here's an overview of the steps needed to get started with ONTAP alerts. The links within each step take you to a page that provides more details.

1

Review prerequisites

Ensure your environment meets these requirements.

2

Set up ONTAP alerts

Configure a [Console agent](#) in NetApp Console.

3

What's next?

After you set up ONTAP alerts, here's what you might do next.

- [View storage issues and potential risks on the Alerts list page.](#)
- [View alert details in ONTAP System Manager.](#)

Set up ONTAP alerts

To use ONTAP alerts, perform a few steps to set it up.

Before you begin, review [prerequisites](#) to ensure that your environment is ready.

Review [standard NetApp Console requirements](#).

Access to cluster resources

To view the alerts, the logged-in user must be part of the NetApp Console organization and should have the required access to the cluster resource.

Create the Console agent

You should reach out to your NetApp Sales Rep to try out or use ONTAP alerts. Then, when you use the Console agent, it will include the appropriate capabilities for ONTAP alerts.

To create the Console agent in the NetApp Console, refer to the BlueXP documentation that describes [how to create a Console agent](#).

After you set up the Console agent and add the system, wait about 15 minutes for the initial discovery.

Access ONTAP alerts

You use the NetApp Console to view ONTAP alerts.

To log in to the NetApp Console, you can use your NetApp Support Site credentials or you can sign up for a NetApp cloud login using your email and a password. [Learn more about logging in.](#)

Steps

1. Open a web browser and go to the [NetApp Console](#).
- The Console login page appears.
2. Log in to the Console.
3. From the Console left navigation bar, select **Storage > Alerts**.

The Alerts list page appears.
