# Manage certificates

## View certificates

You can view summary information for a certificate, which includes the organization using the certificate, the authority that issued the certificate, the period of validity, and the fingerprints (unique identifiers).

### Before you begin

You must be logged in with a user profile that includes Security admin permissions. Otherwise, certificate functions do not appear.

### Steps

1. Select **Certificate Management**.
2. Select one of the following tabs:
  - **Management** — Shows the certificate for the system hosting the Web Services Proxy. A management certificate can be self-signed or approved by a certificate authority (CA). It allows secure access to Unified Manager.
  - **Trusted** — Shows certificates that Unified Manager can access for storage arrays and other remote servers, such as an LDAP server. The certificates can be issued from a certificate authority (CA) or can be self-signed.
3. To see more information about a certificate, select its row, select the ellipses at the end of the row, and then click **View** or **Export**.

## Export certificates

You can export a certificate to view its complete details.

### Before you begin

To open the exported file, you must have a certificate viewer application.

### Steps

1. Select **Certificate Management**.
2. Select one of the following tabs:
  - **Management** — Shows the certificate for the system hosting the Web Services Proxy. A management certificate can be self-signed or approved by a certificate authority (CA). It allows secure access to Unified Manager.
  - **Trusted** — Shows certificates that Unified Manager can access for storage arrays and other remote servers, such as an LDAP server. The certificates can be issued from a certificate authority (CA) or can be self-signed.
3. Select a certificate from the page, and then click the ellipses at the end of the row.
4. Click **Export**, and then save the certificate file.
5. Open the file in your certificate viewer application.
