Flex Subscription service capacity definitions

The NetApp Keystone Flex Subscription (Flex Subscription) service capacities include:

- **Logical capacity.** Data placed into the Flex Subscription infrastructure by a customer:

- All Flex Subscription capacities refer to a logical capacity.

For example, if a 1 TiB file is stored on the Flex Subscription infrastructure, then at least 1 TiB of capacity must be purchased.

- **Committed capacity.** Minimum logical capacity billed each month for the duration of the term:

- Capacity is committed to each performance level.
- Committed capacity cannot be decreased during the term.
- Committed capacity and additional performance levels can be added during the term.

- **Burst capacity.** Logical capacity, in excess of committed capacity:

- Flex Subscription services provides 20% capacity in excess of the committed capacity.
- Burst capacity can be consumed on an elastic basis and is charged on a daily, average-consumed basis.
- Burst capacity up to 20% is charged at a same rate as the committed capacity.
- Burst capacity greater than 20% of committed is charged at a premium rate. Contact support for any additional burst requirements greater than 20%.

- **Consumed/provisioned capacity.** Sum of all configured volume sizes:

- Capacity is provisioned through the creation, modification, deletion, or potential auto-growth of volumes.
- Includes snapshots and clones.
- The amount of data stored within provisioned capacity is not considered.
- The amount of data actually written to disk is not considered.

- **Billed capacity.** Monthly bill = (committed capacity [TiB] * committed rate [\$/TiB]) + (daily average provisioned burst capacity [TiB] * burst rate [\$/TiB]):

- The monthly bill contains a minimum charge based on the committed capacity.

The monthly bill varies beyond the minimum charge based on daily average burst capacity consumption.
