# Initialize object storage

Object storage must be initialized before it can be used.

If you attempt to create a storage bucket on object storage that has not yet been initialized, you will see the prompt to initialize the storage. The following section describes the process.

## Steps

1. Display the [Buckets list](#) and select the Subtenant under which to create the bucket.
2. If the object storage has not been initialized for this subtenant, the following message is displayed:

## Buckets

The screenshot shows a 'Subtenant' dropdown menu with 'MySubtenant' selected. Below it is a warning message: 'Object Storage for MySubtenant is not currently enabled. Please initialise the service using the button below.' A blue button labeled 'Initialise Object Storage' is centered below the message.

3. Click **Initialize Object Storage**.
4. In the Initialize Object Storage dialog box, select the quota for the object storage and click **Create**.

The 'Initialise Object Storage' dialog box features a 'Quota Usage' section with a progress bar showing 2/5 TiB. Below this is a 'Quota' section with a slider set to 100, radio buttons for 'GiB' (selected) and 'TiB', and 'Cancel' and 'Create' buttons at the bottom right.

5. Check the jobs list to make sure the object storage is successfully initialized.
