# Managing tenants and subtenants

You can view and manage your tenants and subtenants by using NetApp Service Engine. The initial tenancy is set up by NetApp support for service providers/partners and tenants. The region, zone, and subscription are already configured by support, and are available when you create tenants and subtenants under your tenancy.

## Tenants

If you are a partner admin, you can create, modify, and delete a tenant from **ADMINISTRATION > Tenants**. Tenant admins can only view their respective tenant subscriptions and subtenants. For the tenants under your partner tenancy, you can also define the network.

### Create a tenant

You can create a tenant if you are a partner admin. You can also create and manage networks for each tenant. For more information on creating networks, see [Define network configurations with subnets](#).

#### Steps

1. Click **Create Tenant**.
2. Add a name and the code.  
The code that represents the tenant should be unique within a NetApp Service Engine instance and consist of lower-case characters.
3. Click **Create**.

You can only modify the name and description of an existing tenant. Additionally, you cannot delete a tenant that has subtenants or storage components associated with it.

## Subtenants

If you are a Partner admin or a Tenant admin, you can view and manage subtenants.

### Create a subtenant

If you are a Partner admin or a Tenant admin, you can create, modify, and delete a subtenant from **ADMINISTRATION > Subtenants**. You can also create and manage networks for each subtenant.

For more information on creating networks, see [Define network configurations with subnets](#).

#### Steps

1. Click **Create Subtenant**.
2. Add a name and the code.  
The code that represents the subtenant should be unique within a NetApp Service Engine instance and consist of lower-case characters.
3. Click **Create**.

You can only modify the name of an existing subtenant. Additionally, you cannot delete a subtenant that has storage components associated with it.
