NetApp Storage Integration Overview

NetApp Astra Control overview

For a detailed installation and operations guide on Astra Control Center, follow the documentation [here](#).

**Astra Control Center automation**

Astra Control Center has a fully functional REST API for programmatic access. Users can use any programming language or utility to interact with Astra Control REST API endpoints. To learn more about this API, see the documentation [here](#).

If you are looking for a ready-made software development toolkit for interacting with Astra Control REST APIs, NetApp provides a toolkit with Astra Control Python SDK, which you can download [here](#).

If programming is not appropriate for your situation and you would like to use a configuration management tool, you can clone and run the Ansible playbooks that NetApp publishes [here](#).

**Astra Trident Overview**

Refer to the documentation [here](#) to install and use Astra Trident.
