Considerations for transitioning 7-Mode IP addresses..... 1

Considerations for transitioning 7-Mode IP addresses

You must be aware of certain considerations when transitioning 7-Mode IP addresses to storage virtual machines (SVMs) in ONTAP.

- You can transition existing 7-Mode IP addresses or specify new IP addresses to be configured on the SVM by using the 7-Mode Transition Tool.
 - Existing 7-Mode IP addresses are created on the SVM in the administrative **down** state in the apply configuration (precutover) phase.
 - New IP addresses are created on the SVM in the administrative **up** state in the apply configuration (precutover) phase.
- IPv6 addresses cannot be transitioned and must be manually configured after the transition.
- iSCSI and FC LIFs are not transitioned and must be manually configured after the transition.
