# Considerations for transitioning of 7-Mode SnapLock options

The 7-Mode Transition Tool supports the transition of a few 7-Mode options that are related to SnapLock volumes.

Data ONTAP operating in 7-Mode has the following options that are related to SnapLock volumes:

- `snaplock.autocommit_period`

This option is at a volume level in ONTAP, and is transitioned to ONTAP during the transition.

- `snaplock.compliance.write_verify`

This option is not applicable in ONTAP.

- `snaplock.log.default_retention`

- `snaplock.log.maximum_size`

Although the `snaplock.log.default_retention` and `snaplock.log.maximum_size` options are supported in ONTAP, the settings configured in these options are not transitioned by the 7-Mode Transition Tool. You must manually set these options for audit volumes after the transition is completed.
