- Cluster prerequisites 1

Prerequisites for transitioning NFS configurations

NFS configurations are transitioned by the 7-Mode Transition Tool only when certain prerequisites are met on the 7-Mode system and the cluster. If any of the conditions are not met, the tool does not transition the configuration.

7-Mode prerequisites

- NFS must be licensed.
- If MultiStore is licensed, NFS must be enabled on all of the vFiler units.
- NFS service must be running on the 7-Mode systems during transition.

Even after client access is disconnected and you prepare to start the export phase, the service must be running on the 7-Mode systems.

- If you want to transition in-memory export rules, you must add them to the `/etc/exports` file before transition.

The 7-Mode Transition Tool transitions only the persistent export rules that are defined in the `/etc/exports` file.

Cluster prerequisites

- NFS must be licensed.
