Verifying that RHEL 5 LUNs are ready for transition using the CLI 1

Verifying that RHEL 5 LUNs are ready for transition using the CLI

If your Red Hat Enterprise Linux (RHEL) 5 LUN is configured with a device mapper multipath (DMMP), you should verify that a file system is not configured before you transition the LUN from Data ONTAP operating in 7-Mode to clustered Data ONTAP.

Steps

1. Locate the SCSI device name for the LUN to be transitioned:

```
sanlun lunshow
```

2. Identify the DMMP device name for the LUN:

```
multipath -ll
```

The DMMP device name can be a device handle ID (WWID) such as `360a980003753456258244538554b4b53`, or it can be an alias, such as, `dmmp_raw_lun`.

3. Verify that the LUN does not have a file system:

```
dumpe2fs/dev/mapper/DMMP device name
```

If the LUN does not have a file system, `Couldn't find valid filesystem superblock` is displayed in the output.
