# Verifying that RHEL 6 DMMP devices are ready for transition using CLI

Before you transition your Red Hat Enterprise Linux (RHEL) 6 DMMP device, you must verify that it is not part of a Logical Volume Manager (LVM) and that it does not have a file system.

## Steps

1. Gather pretransition information from the *Inventory Assessment Workbook*.
2. Verify that the DMMP device exists in the `/dev/mapper` directory:

```
ls /dev/mapper/ DMMP_device_name
```

If the DMMP device is not displayed, the device might be using an alias or a user-friendly name.

3. Determine whether the DMMP device is part of an LVM and whether the DMMP device has a file system:

```
blkid
```

If the DMMP device is not part of an LVM and has no file system the device entry should not be displayed in blkidoutput.
