# vserver config-replication commands

## vserver config-replication pause

Temporarily pause Vserver configuration replication

**Availability:** This command is available to *cluster* administrators at the *advanced* privilege level.

### Description

Vserver domain locking functionality locks the Vserver while Vserver DM is recording a configuration baseline. This command aborts the ongoing baseline generation activity, unlocks the Vserver and temporarily pauses configuration replication for the Vserver. Command confirmations have to be enabled to execute this command. The time at which replication resumes is displayed after successful completion of the command. Configuration changes made after executing this command are not replicated to the partner cluster. If a disaster occurs during this time, the configuration changes made are lost. Replication can be manually resumed by executing the [vserver config-replication resume](#) command.

### Parameters

**-vserver <vserver name> - Vserver name**

== Examples

```
cluster::> vserver config-replication pause -vserver vs1
Vserver configuration replication will be paused, then automatically
resumed after five minutes.
    Manually resume configuration replication by running the "vserver
config-replication resume -vserver vs1" command.
    Do you want to continue ? {y|n}: y
Vserver configuration replication is paused and will be resumed at:
5/24/2014 06:11:23
```

## vserver config-replication resume

Resume Vserver configuration replication

**Availability:** This command is available to *cluster* administrators at the *advanced* privilege level.

### Description

This command resumes configuration replication of the Vserver which was temporarily paused by using the [vserver config-replication pause](#) command. Successful completion of the command ensures that configuration replication has been resumed for the Vserver.

## Parameters

**-vserver <vserver name> - Vserver name**

== Examples

```
cluster::> vserver config-replication resume -vserver vs1
```

## vserver config-replication show

Display Vserver configuration replication resume time

**Availability:** This command is available to *cluster* administrators at the *advanced* privilege level.

## Description

The `vserver config-replication show` command displays the time at which the configuration replication resumes for the Vserver.

## Parameters

**{ [-fields <fieldname>,...]**

If you specify the `-fields <fieldname>, ...` parameter, the command output also includes the specified field or fields. You can use `'-fields ?'` to display the fields to specify.

**| [-instance ] }**

If you specify the `-instance` parameter, the command displays detailed information about all fields.

**[-vserver <vserver>] - Vserver**

If you specify this parameter, the command displays resume time for the specified Vserver.

**[-resume-time <MM/DD/YYYY HH:MM:SS>] - Replication resume time**

If you specify this parameter, the command displays Vservers whose configuration replications are resumed at the specified resume time.

## Examples

```
cluster::> vserver config-replication show
                Replication
      Vserver   Resume Time
-----
      vs1      12/9/2014 03:18:48
```
