cluster ha commands

cluster ha modify

Modify high-availability configuration of cluster management services

Availability: This command is available to *cluster* administrators at the *admin* privilege level.

Description

The `cluster ha modify` command enables or disables cluster high availability in a two-node cluster. Enable high availability when performing some procedures, such as replacing hardware.

This command is required to enable high availability if the cluster only has two nodes. Do not run this command in a cluster that has three or more nodes.

Cluster high availability for two-node clusters differs from the storage failover technology used between two nodes for storage high availability.

Parameters

`[-configured {true|false}] - HA Configured`

Use this parameter with the value `true` to enable high availability mode in the cluster. Use this parameter with the value `false` to disable high availability mode in the cluster.

Examples

The following example enables cluster high availability in a cluster.

```
cluster1::> cluster ha modify -configured true
```

cluster ha show

Show high-availability configuration status for the cluster

Availability: This command is available to *cluster* administrators at the *admin* privilege level.

Description

The `cluster ha show` command displays the high-availability status of the cluster. Cluster high-availability mode applies only to two-node clusters.

Examples

The following example displays the high-availability status for a two-node cluster :

```
cluster1::> cluster ha show  
High-Availability Configured: true
```
