lun copy commands

lun copy cancel

Cancel a LUN copy operation before the new LUN has been created

Availability: This command is available to cluster and Vserver administrators at the advanced privilege level.

Description

The lun copy cancel command cancels an ongoing LUN copy operation prior to creation of the new LUN. The command fails if the LUN already exists at the destination path; in that case, use the lun delete command to delete the LUN at the destination path.

All data transfers will be halted.

Parameters

{-vserver <Vserver Name> - Vserver Name (privilege: advanced)}
   Specifies the name of the Vserver that will host the destination LUN.

{-destination-path <path> - Destination Path (privilege: advanced)}
   Specifies the full path to the new LUN, in the format /vol/<volume>[/<qtree>]/<lun>.

Examples

cluster1::*> lun copy cancel -vserver vs1 -destination-path /vol/vol2/lun2

Cancels the copy operation identified by Vserver vs1 and destination path /vol/vol2/lun2.

• lun delete

lun copy modify

Modify an ongoing LUN copy operation

Availability: This command is available to cluster and Vserver administrators at the admin privilege level.

Description

The lun copy modify command modifies the maximum throughput of an ongoing copy operation.
Parameters

{-vserver <Vserver Name> - Vserver Name}
   Specifies the name of the Vserver that will host the destination LUN.

-destination-path <path> - Destination Path
   Specifies the full path to the new LUN, in the format /vol/<volume>[/<qtree>]/<lun>.

-max-throughput {<integer>[KB|MB|GB|TB|PB]} - Maximum Transfer Rate (per sec)
   Specifies the maximum amount of data, in bytes, that can be transferred per second in support of this
   operation. This mechanism can be used to throttle a transfer, to reduce its impact on the performance of the
   source and destination nodes.

   The specified value will be rounded up to the nearest megabyte.

Examples

cluster1::> lun copy modify -vserver vs1 -destination-path /vol/vol2/lun2
   -max-throughput 25MB

Modifies the maximum throughput for the ongoing copy job identified by Vserver vs1 and destination path
/vol/vol2/lun2 to 25 MB/sec.

lun copy pause

Pause an ongoing LUN copy operation

Availability: This command is available to cluster and Vserver administrators at the admin privilege level.

Description

The lun copy pause command pauses an ongoing copy operation. Use the lun copy resume command to
resume the copy operation.

Parameters

{-vserver <Vserver Name> - Vserver Name}
   Specifies the name of the Vserver that will host the destination LUN.

-destination-path <path> - Destination Path
   Specifies the full path to the new LUN, in the format /vol/<volume>[/<qtree>]/<lun>.

Examples

cluster1::> lun copy pause -vserver vs1 -destination-path /vol/vol2/lun2

Pauses the ongoing copy operation identified by Vserver \texttt{vs1} and destination path \texttt{/vol/vol2/lun2}.

\textbf{Related Links}

\begin{itemize}
  \item \texttt{lun copy resume}
\end{itemize}

\section*{lun copy resume}

Resume a paused LUN copy operation

\textbf{Availability:} This command is available to \textit{cluster} and \textit{Vserver} administrators at the \textit{admin} privilege level.

\textbf{Description}

The \texttt{lun copy resume} command resumes a paused copy operation.

\textbf{Parameters}

\begin{itemize}
  \item \texttt{-vserver <Vserver Name>} - \textit{Vserver Name}
    \begin{itemize}
      \item Specifies the name of the Vserver that will host the destination LUN.
    \end{itemize}
  \item \texttt{-destination-path <path>} - \textit{Destination Path}
    \begin{itemize}
      \item Specifies the full path to the new LUN, in the format \texttt{/vol/<volume>/<qtree>/lun}.
    \end{itemize}
\end{itemize}

\textbf{Examples}

\begin{verbatim}
cluster1::> lun copy resume -vserver vs1 -destination-path /vol/vol2/lun2
\end{verbatim}

Resumes the paused copy operation identified by Vserver \texttt{vs1} and destination path \texttt{/vol/vol2/lun2}.

\section*{lun copy show}

Display a list of LUNs currently being copied

\textbf{Availability:} This command is available to \textit{cluster} and \textit{Vserver} administrators at the \textit{admin} privilege level.

\textbf{Description}

The \texttt{lun copy show} command shows information about LUNs currently being copied in the cluster.

\textbf{Parameters}

\begin{itemize}
  \item \texttt{[-fields <fieldname>,...]} \begin{itemize}
      \item If you specify the \texttt{-fields <fieldname>, ...} parameter, the command output also includes the specified field or fields. You can use \texttt{'-fields ?'} to display the fields to specify.
  \end{itemize}
\end{itemize}
If you specify the `-instance` parameter, the command displays detailed information about all fields.

`[-vserver <Vserver Name>]` - Destination Vserver Name
Selects LUN copy operations that match this parameter value.

`[-destination-path <path>]` - Destination Path
Selects LUN copy operations that match this parameter value.

`[-source-vserver <vserver name>]` - Source Vserver Name
Selects LUN copy operations that match this parameter value.

`[-source-path <path>]` - Source Path
Selects LUN copy operations that match this parameter value.

`[-source-snapshot <snapshot name>]` - Source Snapshot Name
Selects LUN copy operations that match this parameter value.

`[-is-promoted-early {true|false}]` - Is Destination Promoted Early
Selects LUN copy operations that match this parameter value.

`[-max-throughput {<integer>[KB|MB|GB|TB|PB]}]` - Maximum Transfer Rate (per sec)
Selects LUN copy operations that match this parameter value.

Selects LUN copy operations that match this parameter value. The possible values are:

- Preparing - the LUN copy job is in Preparing status.
- Allocation-Map - the LUN copy job is in Allocating status.
- Data - the LUN copy job is in Moving Data status.
- Destroying - the LUN copy job is in Destroying status.
- Paused-Manual - the LUN copy job is in Manually Paused status.
- Paused-Error - the LUN copy job is in Paused By Error status.
- Complete - the LUN copy job is in Complete status.
- Destroyed - the LUN copy job is in Destroyed status.
- Terminated-Manual - the LUN copy job is in Manually Terminated status.

`[-progress-percent <percent>]` - LUN Copy Progress (%)
Selects LUN copy operations that match this parameter value.

`[-elapsed-time <time_interval>]` - Elapsed Time
Selects LUN copy operations that match this parameter value.
[-cutover-time <time_interval>] - Cutover Time
Selects LUN copy operations that match this parameter value.

[-is-snapshot-fenced {true|false}] - Is Snapshot Fenced
Selects LUN copy operations that match this parameter value.

[-is-destination-ready {true|false}] - Is Destination Ready
Selects LUN copy operations that match this parameter value.

[-last-failure-reason <text>] - Last Failure Reason
Selects LUN copy operations that match this parameter value.

Examples

cluster1::> lun copy show
<table>
<thead>
<tr>
<th>Vserver</th>
<th>Destination Path</th>
<th>Status</th>
<th>Progress</th>
</tr>
</thead>
<tbody>
<tr>
<td>vs1</td>
<td>/vol/vol2/lun1</td>
<td>Data</td>
<td>35%</td>
</tr>
<tr>
<td>vs1</td>
<td>/vol/vol2/lun2</td>
<td>Complete</td>
<td>100%</td>
</tr>
</tbody>
</table>
2 entries were displayed.

The example above displays information about all the LUN copy operations in the cluster.

cluster1::> lun copy show -vserver vs1 -destination-path /vol/vol2/lun1
-instance
Destination Vserver Name: vs1
    Destination Path: /vol/vol2/lun1
    Source Vserver Name: vs1
    Source Path: /vol/vol1/lun1
    Source Snapshot Name: -
    Is Destination Promoted Early: false
Maximum Transfer Rate (per sec): 0B
    LUN Copy Status: Data
    LUN Copy Progress (%): 35%
    Elapsed Time: 145s
    Cutover Time (secs): 0s
    Is Snapshot Fenced: true
    Is Destination Ready: true
    Last Failure Reason: -

The example above displays all information about the LUN being copied to /vol/vol2/lun1 in Vserver vs1.
**lun copy start**

Start copying a LUN from one volume to another within a cluster

**Availability:** This command is available to *cluster* and *Vserver* administrators at the *admin* privilege level.

**Description**

The `lun copy start` command initiates copying of a LUN from one volume to another. The destination volume can be located in the same Vserver as the source volume (intra-Vserver copy) or in a different Vserver (inter-Vserver).

> A cluster administrator must first create a Vserver peering relationship using `vserver peer create` before initiating an inter-Vserver LUN copy operation.

**Parameters**

- `-vserver <Vserver Name>` - Destination Vserver Name
  
  Specifies the name of the Vserver that will host the new LUN.

- `-destination-path <path>` - Destination Path
  
  Specifies the full path to the new LUN, in the format `/vol/<volume>[/<qtree>/]<lun>`.

- `-source-path <path>` - Source Path
  
  Specifies the full path to the source LUN, in the format `/vol/<volume>[/./snapshot/<snapshot>][/<qtree>/]<lun>`.

- `-source-vserver <vserver name>` - Source Vserver Name
  
  Optionally specifies the name of the Vserver hosting the LUN to be copied.

  If this parameter is not specified, it is assumed that an intra-Vserver copy operation is being initiated. The source volume is expected to be in the same Vserver as the destination volume.

- `-promote-early <true>` - Promote Early
  
  Optionally specifies that the destination LUN needs to be promoted early.

  If the destination is promoted early, the new LUN will be visible immediately. However, Snapshot copies of the volume containing the new LUN cannot be taken until the LUN copy operation reaches 'Moving Data' status.

  If the destination is promoted late, the new LUN will be visible only after it has been fully framed. However, the LUN copy job will not block the creation of Snapshot copies of the volume containing the new LUN.

  If this parameter is not specified, the destination LUN will be promoted late.

- `-max-throughput {<integer>[KB|MB|GB|TB|PB]}` - Maximum Transfer Rate (per sec)
  
  Optionally specifies the maximum amount of data, in bytes, that can be transferred per second in support of this operation. This mechanism can be used to throttle a transfer, to reduce its impact on the performance of the source and destination nodes.

  If this parameter is not specified, throttling is not applied to the data transfer.
Examples

cluster1::> lun copy start -vserver vs2 -destination-path /vol/vol2/lun2 -source-vserver vs1 -source-path /vol/vol1/lun1

Starts an inter-Vserver copy of LUN lun1 from volume vol1 in Vserver vs1 to lun2 on volume vol2 in Vserver vs2.

cluster1::> lun copy start -vserver vs1 -destination-path /vol/vol2/lun2 -source-path /vol/vol1/lun1

Starts an intra-Vserver copy of LUN lun1 from volume vol1 in Vserver vs1 to lun2 on volume vol2 in Vserver vs1.

cluster1::> lun copy start -vserver vs1 -destination-path /vol/vol2/lun2 -source-path /vol/vol1/.snapshot/snap1/lun1

Starts an intra-Vserver copy of LUN lun1 from Snapshot copy snap1 of volume vol1 in Vserver vs1 to lun2 on volume vol2 in Vserver vs1.
