# volume aggregate commands

## volume aggregate vacate

Move all Infinite Volume constituents from one aggregate to another.

**Availability:** This command is available to *cluster* administrators at the *admin* privilege level.

### Description

The `volume aggregate vacate` command moves all constituents belonging to a given Infinite Volume from the source aggregate to the destination aggregate.

The `volume aggregate vacate` command is only supported for Infinite Volumes.

### Parameters

**-vserver <vserver name> - Vserver Name**

The name of the Vserver that owns the volume.

**-volume <volume name> - Volume Name**

The name of the volume.

**-source-aggregate <aggregate name> - Source Aggregate**

The source aggregate from which all Infinite Volume constituents are being moved.

**-destination-aggregate <aggregate name> - Destination Aggregate**

The destination aggregate to which the Infinite Volume constituents are being moved.

**[-w, -foreground {true|false}] - Foreground Process**

This specifies whether the operation runs as a foreground process. If this parameter is not specified, the default setting is *false* (the operation runs in the background). When set to *true*, the command will not return until the process completes.

### Examples

The following example moves all constituents of Infinite Volume `repo_vol` from `aggr1` to `aggr2`.

```
cluster1::> volume aggregate vacate -vserver vs0 -volume repo_vol -source
-aggregate aggr1 -destination-aggregate aggr2
```
