job private commands

job private delete

Delete a job

Availability: This command is available to *cluster* and *Vserver* administrators at the *advanced* privilege level.

Description

The `job private delete` command deletes a private job. Private jobs are affiliated with a specific node and do not use any cluster facilities, such as the replicated database.

If you use this command on a job that does not support the delete operation, the command returns an error message.

Use the [job private show](#) command to view a list of private jobs that can be deleted.

Parameters

-node {<nodename>|local} - Node (privilege: advanced)

Use this parameter to specify the node with which the private job is associated.

-id <integer> - Job ID (privilege: advanced)

Use this parameter to specify the numeric ID of the private job to be deleted. A job ID is a positive integer.

[-vserver <vserver name>] - Owning Vserver (privilege: advanced)

Use this parameter to specify the name of the Vserver that owns the job.

Examples

The following example shows how to delete the job that has ID 273 from the node named `node2` :

```
cluster1::*> job private delete -node node2 -id 273
```

- [job private show](#)

job private pause

Pause a job

Availability: This command is available to *cluster* and *Vserver* administrators at the *advanced* privilege level.

Description

The `job private pause` command pauses a private job. Private jobs are affiliated with a specific node and do not use any cluster facilities, such as the replicated database.

If you use this command to pause a job that does not support it, the command returns an error message.

Use the [job private resume](#) command to resume a paused private job.

Use the [job private show](#) command to view a list of private jobs.

Parameters

-node {<nodename>|local} - Node (privilege: advanced)

Use this parameter to specify the node with which the private job is associated.

-id <integer> - Job ID (privilege: advanced)

Use this parameter to specify the numeric ID of the paused private job to be paused. A job ID is a positive integer.

[-vserver <vserver name>] - Owing Vserver (privilege: advanced)

Use this parameter to specify the name of the Vserver that owns the job.

Examples

The following example pauses the private job that has ID 99 on the node `node1` :

```
cluster1::*> jobs private pause -node node1 -id 99
```

job private resume

Resume a job

Availability: This command is available to *cluster* and *Vserver* administrators at the *advanced* privilege level.

Description

The `job private resume` command resumes a private job that was paused by using the [job private pause](#) command. Private jobs are affiliated with a specific node and do not use any cluster facilities, such as the replicated database.

Use the [job private show](#) command to view a list of paused private jobs that can be resumed.

Parameters

-node {<nodename>|local} - Node (privilege: advanced)

Use this parameter to specify the node with which the paused private job is associated.

-id <integer> - Job ID (privilege: advanced)

Use this parameter to specify the numeric ID of the paused private job to be resumed. A job ID is a positive integer.

[-vserver <vserver name>] - Owing Vserver (privilege: advanced)

Use this parameter to specify the name of the Vserver that owns the job.

Examples

The following example resumes the paused private job that has ID 99 on a node named `node2` :

```
cluster1::*> job private resume -node node2 -id 99
```

job private show-completed

Display a list of completed jobs

Availability: This command is available to *cluster* and *Vserver* administrators at the *advanced* privilege level.

Description

The `job private show-completed` command displays information about completed private jobs. Private jobs are affiliated with a specific node and do not use any cluster facilities, such as the replicated database.

Parameters

[-fields <fieldname>,...]

If you specify the `-fields <fieldname>, ...` parameter, the command output also includes the specified field or fields. You can use `'-fields ?'` to display the fields to specify.

[-instance] (privilege: advanced) }

If you specify the `-instance` parameter, the command displays detailed information about all fields.

[-node {<nodename>|local}] - Node (privilege: advanced)

Use this parameter to display information only about completed jobs that are associated with the node you specify.

[-id <integer>] - Job ID (privilege: advanced)

Use this parameter to display information only about completed jobs that have the ID you specify.

[-vserver <vserver name>] - Owning Vserver (privilege: advanced)

Use this parameter to display only completed jobs that are owned by the Vserver you specify.

[-name <text>] - Name (privilege: advanced)

Use this parameter to display information only about completed jobs that have the name you specify.

[-description <text>] - Description (privilege: advanced)

Use this parameter to display information only about completed jobs that have the description you specify.

[-priority {Low|Medium|High|Exclusive}] - Priority (privilege: advanced)

Use this parameter to display information only about completed jobs that have the priority you specify.

[-schedule <job_schedule>] - Schedule (privilege: advanced)

Use this parameter to display information only about completed jobs that have the schedule you specify.

[-queuetime <MM/DD HH:MM:SS>] - Queue Time (privilege: advanced)

Use this parameter to display information only about completed jobs that have the queue time you specify.

[-starttime <MM/DD HH:MM:SS>] - Start Time (privilege: advanced)

Use this parameter to display information only about completed jobs that have the start time you specify.

[-endtime <MM/DD HH:MM:SS>] - End Time (privilege: advanced)

Use this parameter to display information only about completed jobs that have the end time you specify.

[-dropdeadtime <MM/DD HH:MM:SS>] - Drop-dead Time (privilege: advanced)

Use this parameter to display information only about completed jobs that have the final timeout time you specify.

[-restarted {true|false}] - Restarted? (privilege: advanced)

Use this parameter to display information only about completed jobs that have the restart value you specify.

[-state

{Initial|Queued|Running|Waiting|Pausing|Paused|Quitting|Success|Failure|Reschedule|Error|Quit|Dead|Unknown|Restart|Dormant}] - State (privilege: advanced)

Use this parameter to display information only about completed jobs that have the job state you specify.

[-code <integer>] - Status Code (privilege: advanced)

Use this parameter to display information only about completed jobs that have the status code you specify.

[-completion <text>] - Completion String (privilege: advanced)

Use this parameter to display information only about completed jobs that have the completion text you specify.

[-jobtype <text>] - Job Type (privilege: advanced)

Use this parameter to display information only about completed jobs that have the job type you specify.

[*-category* <text>] - Job Category (privilege: advanced)

Use this parameter to display information only about completed jobs that have the job category you specify.

[*-uuid* <UUID>] - UUID (privilege: advanced)

Use this parameter to display information only about completed jobs that have the UUID you specify.

[*-username* <text>] - User Name (privilege: advanced)

Use this parameter to display information only about completed jobs that are associated with the user you specify.

Examples

The following example shows how to display information about all completed private jobs on the node named `node1`:

```
cluster1::*> job private show-completed -node node1
Node: node1
```

Job ID	Name	Owning Vserver	End Time	Code	Completion String
1	sync task	node1	02/17 15:03:23	0	
2	load_balancing	node1	02/17 16:29:28	0	DONE_VIF_STATS
3	snap-hourly	node1	02/17 16:05:00	0	
4	snap-daily	node1	02/17 00:10:00	0	
5	snap-weekly	node1	02/13 00:15:00	0	
8	Cross-Cluster Manager	node1	02/17 16:27:27	0	complete
9	reconcile service policy	node1	02/17 15:03:12	0	

7 entries were displayed.

job private show

Display a list of jobs

Availability: This command is available to *cluster* and *Vserver* administrators at the *advanced* privilege level.

Description

The `job private show` command displays information about private jobs. Private jobs are affiliated with a specific node and do not use any cluster facilities, such as the replicated database.

Parameters

[*-fields* <fieldname>,...]

If you specify the `-fields <fieldname>, ...` parameter, the command output also includes the specified field or fields. You can use `'-fields ?'` to display the fields to specify.

| [-inprogress] (privilege: advanced)

Displays the job ID, name, owning Vserver, and progress of each private job.

| [-jobstate] (privilege: advanced)

Displays information about each private job's state, including the queue state, whether the job was restarted, and when the job has timed out.

| [-jobuuid] (privilege: advanced)

Displays the ID, name, owning Vserver, and UUID of each private job.

| [-sched] (privilege: advanced)

Displays the job ID, name, owning Vserver, and run schedule of each private job.

| [-times] (privilege: advanced)

Displays the queue time, start time, and end time of each private job.

| [-type] (privilege: advanced)

Displays the type and category of each private job.

| [-instance] (privilege: advanced) }

If you specify the `-instance` parameter, the command displays detailed information about all fields.

[-node {<nodename>|local}] - Node (privilege: advanced)

Selects the private jobs that match this parameter value. .

[-id <integer>] - Job ID (privilege: advanced)

Selects the private jobs that match the ID or range of IDs that you specify.

[-vserver <vserver name>] - Owning Vserver (privilege: advanced)

Selects the private jobs that match this parameter value.

[-name <text>] - Name (privilege: advanced)

Selects the private jobs that match this parameter value.

[-description <text>] - Description (privilege: advanced)

Selects the private jobs that match this parameter value.

[-priority {Low|Medium|High|Exclusive}] - Priority (privilege: advanced)

Selects the private jobs that match this parameter value.

[-schedule <job_schedule>] - Schedule (privilege: advanced)

Selects the private jobs that match this parameter value.

[-queuetime <MM/DD HH:MM:SS>] - Queue Time (privilege: advanced)

Selects the private jobs that match this parameter value.

[-starttime <MM/DD HH:MM:SS>] - Start Time (privilege: advanced)

Selects the private jobs that match this parameter value.

[-endtime <MM/DD HH:MM:SS>] - End Time (privilege: advanced)

Selects the private jobs that match this parameter value.

[-dropdeadtime <MM/DD HH:MM:SS>] - Drop-dead Time (privilege: advanced)

Selects the private jobs that match this parameter value.

[-restarted {true|false}] - Restarted? (privilege: advanced)

Selects the private jobs that match this parameter value.

[-state

{Initial|Queued|Running|Waiting|Pausing|Paused|Quitting|Success|Failure|Reschedule|Error|Quit|Dead|Unknown|Restart|Dormant}] - State (privilege: advanced)

Selects the private jobs that match this parameter value.

[-code <integer>] - Status Code (privilege: advanced)

Selects the private jobs that match this parameter value.

[-completion <text>] - Completion String (privilege: advanced)

Selects the private jobs that match this parameter value.

[-jobtype <text>] - Job Type (privilege: advanced)

Selects the private jobs that match this parameter value.

[-category <text>] - Job Category (privilege: advanced)

Selects the private jobs that match this parameter value.

[-uuid <UUID>] - UUID (privilege: advanced)

Selects the private jobs that match this parameter value.

[-progress <text>] - Execution Progress (privilege: advanced)

Selects the private jobs that match this parameter value.

[-username <text>] - User Name (privilege: advanced)

Selects the private jobs that match this parameter value.

Examples

The following example displays information about all private jobs on the local node:

```
cluster1::*> job private show -node local
Node: node1
```

Job ID	Name	Owning Vserver	State
3	snap-hourly Description: Auto-Snapshot	cluster1	Queued
4	snap-daily Description: Auto-Snapshot	cluster1	Queued
5	snap-weekly Description: Auto-Snapshot	cluster1	Queued
6	sync task Description: sync task	cluster1	Queued
7	ldap-certs Description: ldap resync	cluster1	Queued

5 entries were displayed.

job private stop

Stop a job

Availability: This command is available to *cluster* and *Vserver* administrators at the *advanced* privilege level.

Description

The `job private stop` command stops a running private job. A private job is a job that is associated with a specific node and does not use cluster facilities. A stopped job cannot be restarted.

Parameters

-node {<nodename>|local} - Node (privilege: advanced)

This specifies the node on which the job is running.

-id <integer> - Job ID (privilege: advanced)

This specifies the numeric ID of the job that is to be stopped.

[-vserver <vserver name>] - Owning Vserver (privilege: advanced)

Use this parameter to specify the name of the Vserver that owns the job.

Examples

The following example stops a private job with the ID 416 on a node named node0:

```
cluster1::*> job private stop -node node0 -id 416
```

job private watch-progress

Watch the progress of a job

Availability: This command is available to *cluster* and *Vserver* administrators at the *advanced* privilege level.

Description

The `job private watch-progress` command displays and periodically updates the progress of a private job. A private job is a job that is associated with a specific node and does not use cluster facilities. You can specify the frequency of the progress updates.

Parameters

-node {<nodename>|local} - Node (privilege: advanced)

This specifies the node on which the job is running.

-id <integer> - Job ID (privilege: advanced)

This specifies the numeric ID of the job whose progress is to be monitored.

[-vserver <vserver name>] - Owing Vserver (privilege: advanced)

Use this parameter to specify the Vserver with which the paused private job is associated.

[-interval <integer>] - Refresh Interval (seconds) (privilege: advanced)

This optionally specifies, in seconds, the frequency of the updates.

Examples

The following example monitors the progress of the private job that has ID 127 on a node named node1. The progress is updated every 2 seconds.

```
cluster1::*> job private watch-progress -node node1 -id 127 -interval 2
Queued
```
