# security webauthn commands

## security webauthn show

Show Webauthn Global Settings

**Availability:** This command is available to *cluster* and *Vserver* administrators at the *admin* privilege level.

### Description

The `security webauthn show` displays information on the global FIDO2/WebAuthn settings.

### Parameters

{ [-fields <fieldname>,...]}

Selects the fields that you specify.

| [-instance ] }

Displays all the fields for the global WebAuthn settings.

[-vserver <vserver name>] - Vserver

Selects the WebAuthn settings that match this parameter value. If not specified, all cluster-level and Vserver-level settings are displayed.

[-timeout <integer>] - Timeout (ms)

Displays all the fields for the FIDO2/WebAuthn global settings.

[-attestation {none|indirect|direct|enterprise}] - Attestation Conveyance Type

Displays all the fields for the FIDO2/WebAuthn global settings.

[-require-rk {true|false}] - Require Resident Key

Displays all the fields for the FIDO2/WebAuthn global settings.

[-resident-key {required|preferred|discouraged}] - Resident Key

Displays all the fields for the FIDO2/WebAuthn global settings.

[-user-verification {required|preferred|discouraged}] - User Verification

Displays all the fields for the FIDO2/WebAuthn global settings.

[-scope {svm|cluster}] - Cluster or SVM

Displays all the fields for the FIDO2/WebAuthn global settings.

### Examples

The example below displays information on FIDO2/WebAuthn global settings:

```
cluster1::> security webauthn show
Vserver: cluster1
          Timeout (ms): 600000
Attestation Conveyance Type: none
  Require Resident Key: false
  Resident Key: discouraged
  User Verification: discouraged
```

## security webauthn credentials delete

### Delete Webauthn Credentials Data

**Availability:** This command is available to *cluster* and *Vserver* administrators at the *admin* privilege level.

### Description

The `security webauthn credentials delete` command deletes a previously registered FIDO2/WebAuthn credential. All users can delete their own registered FIDO2/WebAuthn credentials, regardless of their authorization role. Only users with *admin* privileges can delete FIDO2/WebAuthn credentials belonging to other users.

### Parameters

#### **-vserver <vserver name> - Vserver**

This parameter optionally specifies the Vserver associated with the FIDO2/WebAuthn credential. If not specified, this defaults to the cluster Vserver.

#### **-username <text> - Username**

Name of the user whose credential is to be deleted.

#### **-index <integer> - Index**

The index of the FIDO2/WebAuthn credential to be deleted. This is used to identify the specific credential if the user has multiple FIDO2/WebAuthn credentials registered and only one of them is to be deleted.

#### **-rpId <text> - Relying Party ID**

The rpId of the FIDO2/WebAuthn credential to be deleted.

### Examples

The following command, when executed by a user with admin privileges, deletes all registered FIDO2/WebAuthn credentials for the Administrative Vserver. When executed by users without admin privileges, the command only deletes that user's own registered credentials:

```
cluster1::> security webauthn credentials delete *
4 entries were deleted.
```

The following command, when executed by a user with admin privileges, deletes all registered FIDO2/WebAuthn credentials for the Administrative Vserver for the username *user1* :

```
cluster1::> security webauthn credentials delete -username user1 *
1 entry was deleted.
```

The following command, when executed by a user with admin privileges, deletes the registered FIDO2/WebAuthn credentials for the Administrative Vserver for the username *user1* at index *1* for the rpId *myontap.example.com* :

```
cluster1::> security webauthn credentials delete -username user1 -index 1
-rpId myontap.example.com
1 entry was deleted.
```

## security webauthn credentials show

Show Webauthn Credentials Data

**Availability:** This command is available to *cluster* and *Vserver* administrators at the *admin* privilege level.

### Description

The `security webauthn credentials show` displays information on the FIDO2/WebAuthn registered credentials.

### Parameters

{ [-fields <fieldname>,...]}

Selects the fields that you specify.

| [-instance ] }

Displays all the fields for the FIDO2/WebAuthn registered credentials.

[-vserver <vserver name>] - Vserver

Selects the FIDO2/WebAuthn registered credentials that match this parameter value. Only cluster-level credentials are supported at this time.

[-username <text>] - Username

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

[-index <integer>] - Index

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

[-rpId <text>] - Relying Party ID

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

**[-credential-id-sha <text>] - SHA-256 Hashed Credential ID**

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

**[-publickey-algorithm <text>] - Public Key Algorithm**

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

**[-publickey <text>] - Public Key**

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

**[-display-name <text>] - Display Name**

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

**[-credential-type <public-key>] - Credential Type**

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

**[-rpName <text>] - Relying Party Name**

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

**[-creation-time <MM/DD/YYYY HH:MM:SS>] - Creation Time**

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

**[-last-used <MM/DD/YYYY HH:MM:SS>] - Last Used**

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

**[-scope {svm|cluster}] - Cluster or SVM**

Selects the FIDO2/WebAuthn registered credentials that match this parameter value.

## Examples

The example below displays information on the FIDO2/WebAuthn registered credentials:

```
cluster1::> security webauthn credentials show
Vserver: cluster1
          Username: admin
          Index: 0
          Relying Party ID: myontap.example.com
          SHA-256 Hashed Credential ID:aaaaaaaaaaaaaaaaaaaaaaaaaaaa
          Public Key Algorithm: ES256
          Public Key: abcd=
          Display Name: admin
          Credential Type: public-key
          Relying Party Name: myontap.example.com
          Creation Time: 6/10/2024 15:01:00
          Last Used: 6/10/2024 15:01:00
```

# security webauthn supported-algorithms show

Show WebAuthn Supported Algorithms

**Availability:** This command is available to *cluster* and *Vserver* administrators at the *admin* privilege level.

## Description

The `security webauthn supported-algorithms show` displays information on the FIDO2/WebAuthn supported algorithms.

## Parameters

**{ [-fields <fieldname>,...]**

Selects the fields that you specify.

**| [-instance ] }**

Displays all the fields for the FIDO2/WebAuthn supported algorithms.

**[-vserver <vserver name>] - Vserver**

Selects the FIDO2/WebAuthn settings that match this parameter value. If not specified, all cluster-level and Vserver-level settings are displayed.

**[-alg-name <text>] - Algorithm Name**

Displays all the fields for the FIDO2/WebAuthn supported algorithms.

**[-alg-id <integer>] - Algorithm ID**

Displays all the fields for the FIDO2/WebAuthn supported algorithms.

**[-alg-type <public-key>] - Algorithm Type**

Displays all the fields for the FIDO2/WebAuthn supported algorithms.

**[-scope {svm|cluster}] - Cluster or SVM**

Displays all the fields for the FIDO2/WebAuthn supported algorithms.

## Examples

The example below displays information on the FIDO2/WebAuthn supported algorithms:

```
cluster1::> security webauthn supported-algorithms show
```

```
Vserver: cluster1
```

ID	Name	Type
-----	-----	-----
-7	ES-256	public-key
-35	ES-384	public-key
-257	RS-256	public-key

3 entries were displayed.
