mav events

mav.disabled events

mav.disabled.used.console

Severity

ALERT

Description

This message occurs when multi-admin verification (MAV) is enabled, the bootarg "bootarg.multi_admin.enable" is set to false, and an operation that normally requires MAV approval is executed via the console. This results in an MAV request, executed from the console only, without requiring approval for the operation.

Corrective Action

Set the bootarg "bootarg.multi_admin.enable" to true or to unset as soon as it's no longer needed.

Syslog Message

The multi-admin verification (MAV) feature is disabled by a bootarg. An MAV rule is being triggered by the execution of "%s" command by "%s" user. Allow execution from the console.

Parameters

command (STRING): Command that was executed.

user (STRING): User that executed the command.
