## arp.block.unsuitable.workload

**Severity**

NOTICE

**Description**

This message occurs after the anti-ransomware feature has completed its workload evaluation on the volume and determined that the data entropy is high. Consequently, the anti-ransomware feature cannot effectively differentiate between expected workload characteristics and ransomware characteristics. Maintaining the anti-ransomware feature on this volume offers no benefit.

**Corrective Action**

If the specified volume contains only LUNs or NVMe namespaces, then it is recommended to disable the anti-ransomware feature. For more information, search on "ONTAP Autonomous Ransomware Protection"

**Syslog Message**

Volume "%s" in SVM "%s" is unsuitable for anti-ransomware block device analysis.

**Parameters**

**volumeName** (STRING): Name of the volume.
**vserverName** (STRING): Name of the SVM.

# arp.version events

## arp.version.updated

**Severity**

NOTICE

**Description**

This message occurs when an Autonomous Ransomware Protection (ARP) version is updated on a node, whether by the automated update process or by user action.

**Corrective Action**

(None).

**Syslog Message**

Autonomous Ransomware Protection (ARP) version updated to %s.

**Parameters**

**op** (STRING): Autonomous Ransomware Protection (ARP) version.
