ipmultipath events

ipmultipath.init events

ipmultipath.init.badChksumType

Severity

ERROR

Description

This message occurs during IP Multipath session initialization, when an INIT packet with an unknown checksum type is received.

Corrective Action

The two end points are possibly running incompatible versions of ONTAP. Run identical/compatible versions of ONTAP on the two end points and try again.

Syslog Message

Unknown checksum type (%d) in IP Multipath INIT packet.

Parameters

chksum_type (INT): Checksum type received.

ipmultipath.init.badVersion

Severity

ERROR

Description

This message occurs during IP Multipath session initialization, when an INIT packet with an unknown version number is received.

Corrective Action

The two end points are possibly running incompatible versions of ONTAP. Run identical/compatible versions of ONTAP on the two end points and try again.

Syslog Message

Unknown version (%d) in IP Multipath INIT packet.

Parameters

version (INT): Version number received.

ipmultipath.session events

ipmultipath.session.noMemory

Severity

ERROR

Description

This message occurs when an IP Multipath session is dropped due to failure to allocate memory.

Corrective Action

The system is out of memory. Try to reduce load on the system. When memory becomes available, IP Multipath automatically reestablishes the session.

Syslog Message

IP Multipath aborting session due to failure to allocate memory.

Parameters

(None).

ipmultipath.setup events

ipmultipath.setup.bindFailed

Severity

ERROR

Description

This message occurs during IP Multipath connection setup, when the IP Multipath listener process cannot bind to any IP address of the source.

Corrective Action

The source host information provided to IP Multipath is probably incorrect. Correct the configuration information and retry.

Syslog Message

IP Multipath failed to bind to %s.

Parameters

src (STRING): Host name on which the failure occurred.

ipmultipath.setup.connFailed

Severity

ERROR

Description

This message occurs during IP Multipath connection setup, when it cannot connect to the remote end point.

Corrective Action

The destination host information provided to IP Multipath is incorrect or the remote host is unreachable. Correct configuration information and retry. If the remote host is unreachable, IP Multipath automatically establishes the connection after the problem is corrected.

Syslog Message

IP Multipath failed to connect to %s.

Parameters

dst (STRING): Host name of the remote host.
