SV.vfiler.config.move.error

Severity

ERROR

Description

This message occurs when movement of SnapVault® configuration from 'from' vFiler to 'to' vFiler fails. Subsequent SnapVault transfer on the vFiler might fail.

Corrective Action

Move the volume back to 'from' vFiler and then again perform a vFiler move from 'from' vFiler to 'to' vFiler. Please use 'vfiler move' command to move the volume between the vfilers.

Syslog Message

Movement of SnapVault configuration failed while moving volumes between vFiler %s to vFiler %s. Move the volume back to %s vFiler and perform the vFiler move operation again.

Parameters

from_vfiler1 (STRING): vFiler(tm) from which resources are being moved.

to_vfiler (STRING): vFiler to which resources are being moved.

from_vfiler2 (STRING): vFiler to which resources are being moved.

sv.vol events

SV.vol.snapshot.rename.error

Severity

ERROR

Description

This message occurs when the renaming operation of SnapVault® Snapshot(tm) copies belonging to a certain volume fails, even though the "vFiler rename" or "vFiler move" operation was successful. The problem might be that the volume was offline during the "vFiler rename" or "vFiler move" operation, and it might cause SnapVault to have an extra Snapshot copy on the destination. To avoid this scenario, volumes need to be online during a "vFiler rename" or "vFiler move".

Corrective Action

If necessary, delete the extra Snapshot copy manually after the next SnapVault update.

Syslog Message

Rename of SnapVault snapshots for volume %s failed. This might cause SnapVault to have an extra snapshot on destination. If necessary, delete the extra Snapshot copy manually after the next SnapVault update.

Parameters

vol_name (STRING): Volume whose Snapshot copies created by SnapVault® could not be renamed.
