# FLI zoning requirements

A standard migration scenario using FLI requires four distinct zones. You should include specific ports in each zone.

- Zone 1: Source storage to destination storage (production fabric A)

Zone 1 should contain all destination storage initiators on all the nodes and all the source storage target ports in fabric A. Zone members include:

- ONTAP — Node1 — 0a
- ONTAP — Node2 — 0a
- AMS2100 — Ctrl0 — 0a
- AMS2100 — Ctrl1 — 1a

- Zone 2: Source storage to destination storage (production fabric B)

Zone 2 should contain all destination storage initiator ports on all the nodes and all the source storage target ports in fabric B. Zone 2 members include:

- ONTAP — Node1 — 0b
- ONTAP — Node2 — 0b
- AMS2100 — Ctrl0 — 0e
- AMS2100 — Ctrl1 — 1e

- Zone 3: Host to destination storage (production fabric A)

Zone 3 should contain the host bus adapter (HBA) port 1 and the destination controller ports in production Fabric A. Zone 3 members include:

- ONTAP — lif1
- ONTAP — lif3
- Host — HBA0

- Zone 4: Host to destination storage (production fabric B)

Zone 4 should contain the HBA port 2 and the destination controller ports in production fabric B. Zone 4 members include:

- ONTAP — lif2
- ONTAP — lif4
- Host — HBA1
