FLI offline: Importing the data

These steps describe how to import the data from the source LUN to the destination LUN.

Steps

1. Start the migration import.

```
DataMig-cmode:*> lun import start -vserver datamig -path
/vol/winvol/bootlun

DataMig-cmode:*> lun import start -vserver datamig -path
/vol/winvol/fdrive

DataMig-cmode:*> lun import start -vserver datamig -path
/vol/winvol/gdrive
```

2. Monitor the import progress. You can compare the progress you are seeing here with the migration performance estimates that you developed after performing your test migrations.

```
DataMig-cmode:*> lun import show -vserver datamig -fields vserver,
foreign-disk, path, admin-state, operational-state, percent-complete,
imported-blocks, total-blocks, , estimated-remaining-duration
vserver foreign-disk path admin-state operational-state
percent-complete imported-blocks total-blocks estimated-remaining-

3. Check the import job is completed successfully.

```
