Confirming that the DR partners have come online 1

Confirming that the DR partners have come online

After the switchover is complete, you should verify that the DR partners have taken ownership of the disks and the partner SVMs have come online.

1. Confirm that the aggregate disks have switched over to the disaster site: `storage disk show -fields owner,dr-home`

In this example, the output shows that the switched over disks have the dr-home field set:

```
cluster_A::> storage disk show -fields owner,dr-home
disk                owner                dr-home
-----
1.11.0              node_A_1              node_B_1
1.11.1              node_A_1              node_B_1
1.11.2              node_A_1              node_B_1
1.11.3              node_A_1              node_B_1
1.11.4              node_A_1              node_B_1
1.11.5              node_A_1              node_B_1
1.11.6              node_A_1              node_B_1
1.11.7              node_A_1              node_B_1
1.11.8              node_A_1              node_B_1
```

2. Check that the aggregates were switched over by using the storage aggregate show command.

In this example, the aggregates were switched over. The root aggregate (aggr0_b2) is in a degraded state. The data aggregate (b2_aggr2) is in a mirrored, normal state:

```

cluster_A::*> storage aggregate show

.
.
.
mccl-b Switched Over Aggregates:
Aggregate      Size Available Used% State  #Vols  Nodes      RAID
Status
-----
-----
aggr0_b2      227.1GB   45.1GB   80% online    0 node_A_1
raid_dp,

mirror

degraded
b2_aggr1      227.1GB   200.3GB  20% online    0 node_A_1
raid_dp,

mirrored

normal

```

3. Confirm that the secondary SVMs have come online by using the vserver show command.

In this example, the previously dormant sync-destination SVMs on the secondary site have been activated and have an Admin State of running:

```

cluster_A::*> vserver show

Name      Name                               Admin      Operational  Root
Vserver   Type  Subtype                               State      State        Volume
Aggregate Service Mapping
-----
-----
...
cluster_B-vs1b-mc data  sync-destination  running    running
vs1b_vol  aggr_b1  file  file

```
