# Manage key managers

## Security key-managers endpoint overview

### Overview

A key manager is a key management solution (software or dedicated hardware) that enables other ONTAP client modules to securely and persistently store keys for various uses. For example, WAFL uses the key management framework to store and retrieve the volume encryption keys that it uses to encrypt/decrypt data on NVE volumes. A key manager can be configured at both cluster scope and SVM, with one key manager allowed per SVM. The key management framework in ONTAP supports two mutually exclusive modes for persisting keys: external and onboard.

When an SVM is configured with external key management, the keys are stored on up to four primary key servers that are external to the system.

Once external key management is enabled for an SVM, primary key servers can be added or removed using the `/api/security/key-managers/{uuid}/key-servers` endpoint. See `[POST /security/key-managers/{uuid}/key-servers]` and `[DELETE /security/key-managers/{uuid}/key-servers/{server}]` for more details.

Setting up external key management dictates that the required certificates for securely communicating with the key server are installed prior to configuring the key manager. To install the required client and server\_ca certificates, use the `/api/security/certificates/` endpoint.

See `[POST /security/certificates]`, `[GET /security/certificates/uuid]` and `[DELETE /security/certificates/{uuid}]` for more details.

When an SVM is configured with the Onboard Key Manager, the keys are stored in ONTAP in wrapped format using a key hierarchy created using the salted hash of the passphrase entered when configuring the Onboard Key Manager. This model fits well for customers who use ONTAP to store their own data.

### Examples

#### Creating an external key manager with 1 primary key server for a cluster

The example key manager is configured at the cluster-scope with one primary key server. Note that the UUIDs of the certificates are those that are already installed at the cluster-scope. Note the `return_records=true` query parameter is used to obtain the newly created key manager configuration.

```

# The API:
POST /api/security/key-managers

# The call:
curl -X POST 'https://<mgmt-ip>/api/security/key-
managers?return_records=true' -H 'accept: application/hal+json' -d "{
\"external\": { \"client_certificate\": { \"uuid\": \"5fb1701a-d922-11e8-
bfe8-005056bb017d\" }, \"server_ca_certificates\": [ { \"uuid\":
\"827d7d31-d6c8-11e8-b5bf-005056bb017d\" } ], \"servers\": [ { \"server\":
\"10.225.89.33:5696\" } ] } }"

# The response:
{
  "num_records": 1,
  "records": [
    {
      "uuid": "815e9462-dc57-11e8-9b2c-005056bb017d",
      "external": {
        "client_certificate": {
          "uuid": "5fb1701a-d922-11e8-bfe8-005056bb017d"
        },
        "server_ca_certificates": [
          {
            "uuid": "827d7d31-d6c8-11e8-b5bf-005056bb017d"
          }
        ],
        "servers": [
          {
            "server": "10.225.89.33:5696"
          }
        ]
      },
      "_links": {
        "self": {
          "href": "/api/security/key-managers/815e9462-dc57-11e8-9b2c-
005056bb017d"
        }
      }
    }
  ]
}

```

## Creating an external key manager with two primary key servers

The example key manager is configured at the cluster-scope with two primary key servers. Note that the UUIDs of the certificates are those that are already installed at the cluster-scope. Note the *return\_records=true* query parameter is used to obtain the newly created key manager configuration.

```

# The API:
POST /api/security/key-managers

# The call:
curl -X POST 'https://<mgmt-ip>/api/security/key-
managers?return_records=true' -H 'accept: application/hal+json' -d "{
\"external\": { \"client_certificate\": { \"uuid\": \"5fb1701a-d922-11e8-
bfe8-005056bb017d\" }, \"server_ca_certificates\": [ { \"uuid\":
\"827d7d31-d6c8-11e8-b5bf-005056bb017d\" } ], \"servers\": [ { \"server\":
\"104.224.89.33:5696\" }, { \"server\": \"104.224.89.34:5696\" } ] } }"

# The response:
{
  "num_records": 1,
  "records": [
    {
      "uuid": "815e9462-dc57-11e8-9b2c-005056bb017d",
      "external": {
        "client_certificate": {
          "uuid": "5fb1701a-d922-11e8-bfe8-005056bb017d"
        },
        "server_ca_certificates": [
          {
            "uuid": "827d7d31-d6c8-11e8-b5bf-005056bb017d"
          }
        ],
        "servers": [
          {
            "server": "10.225.89.33:5696"
          }
        ]
      },
      "_links": {
        "self": {
          "href": "/api/security/key-managers/815e9462-dc57-11e8-9b2c-
005056bb017d"
        }
      }
    }
  ]
}

```

## Creating an external key manager with 1 primary key server for an SVM

The example key manager is configured at the SVM-scope with one primary key server. Note that the UUIDs of the certificates are those that are already installed in that SVM. Note the *return\_records=true* query parameter is used to obtain the newly created key manager configuration.

```
# The API:
POST /api/security/key-managers

# The call:
curl -X POST 'https://<mgmt-ip>/api/security/key-
managers?return_records=true' -H 'accept: application/hal+json' -d "{
  \"svm\": { \"uuid\": \"216e6c26-d6c6-11e8-b5bf-005056bb017d\" },
  \"external\": { \"client_certificate\": { \"uuid\": \"91dcaf7c-dbbd-11e8-
9b2c-005056bb017d\" }, \"server_ca_certificates\": [ { \"uuid\":
\"a4d4b8ba-dbbd-11e8-9b2c-005056bb017d\" } ], \"servers\": [ { \"server\":
\"10.225.89.34:5696\" } ] } }"

# The response:
{
  "num_records": 1,
  "records": [
    {
      "uuid": "80af63f2-dbbf-11e8-9b2c-005056bb017d",
      "svm": {
        "uuid": "216e6c26-d6c6-11e8-b5bf-005056bb017d"
      },
      "external": {
        "client_certificate": {
          "uuid": "91dcaf7c-dbbd-11e8-9b2c-005056bb017d"
        },
        "server_ca_certificates": [
          {
            "uuid": "a4d4b8ba-dbbd-11e8-9b2c-005056bb017d"
          }
        ],
        "servers": [
          {
            "server": "10.225.89.34:5696"
          }
        ]
      },
      "_links": {
        "self": {
          "href": "/api/security/key-managers/80af63f2-dbbf-11e8-9b2c-
005056bb017d"
        }
      }
    }
  ]
}
```

## Creating an onboard key manager for a cluster

The following example shows how to create an onboard key manager for a cluster with the onboard key manager configured at the cluster-scope.

```
# The API:
POST /api/security/key-managers

# The call:
curl -X POST 'https://<mgmt-ip>/api/security/key-managers' -H 'accept:
application/hal+json' -d '{ "onboard": { "passphrase": "passphrase" } }'
```

## Retrieving the key manager configurations for all clusters and SVMs

The following example shows how to retrieve all configured key managers along with their configurations.

```
# The API:
GET /api/security/key-managers

# The call:
curl -X GET 'https://<mgmt-ip>/api/security/key-managers?fields=*' -H
'accept: application/hal+json'

# The response:
{
  "records": [
    {
      "uuid": "2345f09c-d6c9-11e8-b5bf-005056bb017d",
      "scope": "svm",
      "svm": {
        "uuid": "0f22f8f3-d6c6-11e8-b5bf-005056bb017d",
        "name": "vs0"
      },
      "external": {
        "client_certificate": {
          "uuid": "4cb15482-d6c8-11e8-b5bf-005056bb017d",
          "_links": {
            "self": {
              "href": "/api/security/certificates/4cb15482-d6c8-11e8-b5bf-005056bb017d/"
            }
          }
        }
      },

## Retrieving the key manager configurations for all clusters and SVMs (showing Onboard Key Manager)

The following example shows how to retrieve all configured key managers along with their configurations.

```

# The API:
GET /api/security/key-managers

# The call:
curl -X GET 'https://<mgmt-ip>/api/security/key-managers?fields=*' -H
'accept: application/hal+json'

# The response:
{
  "records": [
    {
      "uuid": "8ba52e0f-ae22-11e9-b747-005056bb7636",
      "scope": "cluster",
      "onboard": {
        "enabled": true,
        "key_backup": "-----BEGIN
BACKUP-----\n <Backup Data>
\n-----END BACKUP-----\n"
      },
      "volume_encryption": {
        "supported": false,
        "message": "The following nodes do not support volume granular
encryption: ntap-vsrm2.",
        "code": 65536935
      },
      "is_default_data_at_rest_encryption_disabled": false
    }
  ],
  "num_records": 1
}

```

## Retrieving expensive fields such as, status.code and status.message, associated with a key manager.

These values are not retrieved by default with the 'fields=\*' option. The following example shows how to retrieve the expensive objects associated with a key manager.

```
# The API:
GET /api/security/key-managers

# The call:
curl -X GET "https://<mgmt-ip>/api/security/key-managers?fields=status.message,status.code" -H 'accept: application/hal+json'

# The response:
{
  "records": [
    {
      "uuid": "ac305d46-aef4-11e9-ad3c-005056bb7636",
      "status": {
        "message": "No action needed at this time.",
        "code": 65537200
      },
      "_links": {
        "self": {
          "href": "/api/security/key-managers/ac305d46-aef4-11e9-ad3c-005056bb7636"
        }
      }
    }
  ],
  "num_records": 1,
  "_links": {
    "self": {
      "href": "/api/security/key-managers?fields=status.message,status.code"
    }
  }
}
```

---

## Retrieving a specific key manager configuration

The following example shows how to retrieve a specific key manager configuration.

```
# The API:
GET /api/security/key-managers/{uuid}
```

```
# The call:
curl -X GET 'https://<mgmt-ip>/api/security/key-managers/<uuid>?fields=*'
-H 'accept: application/hal+json'

# The response:
{
  "uuid": "2345f09c-d6c9-11e8-b5bf-005056bb017d",
  "scope": "svm",
  "svm": {
    "uuid": "0f22f8f3-d6c6-11e8-b5bf-005056bb017d",
    "name": "vs0"
  },
  "external": {
    "client_certificate": {
      "uuid": "4cb15482-d6c8-11e8-b5bf-005056bb017d",
      "_links": {
        "self": {
          "href": "/api/security/certificates/4cb15482-d6c8-11e8-b5bf-005056bb017d/"
        }
      }
    },
    "server_ca_certificates": [
      {
        "uuid": "8a17c858-d6c8-11e8-b5bf-005056bb017d",
        "_links": {
          "self": {
            "href": "/api/security/certificates/8a17c858-d6c8-11e8-b5bf-005056bb017d/"
          }
        }
      }
    ],
    "servers": [
      {
        "server": "10.2.30.4:5696",
        "timeout": 25,
        "username": "",
        "_links": {
          "self": {
            "href": "/api/security/key-managers/2345f09c-d6c9-11e8-b5bf-005056bb017d/key-servers/10.2.30.4:5696/"
          }
        }
      }
    ]
  },
}
```

```

{
  "server": "vs0.local1:3678",
  "timeout": 25,
  "username": "",
  "_links": {
    "self": {
      "href": "/api/security/key-managers/2345f09c-d6c9-11e8-b5bf-005056bb017d/key-servers/vs0.local1:3678/"
    }
  }
}
],
"_links": {
  "self": {
    "href": "/api/security/key-managers/2345f09c-d6c9-11e8-b5bf-005056bb017d"
  }
}
}
}

```

## Updating the configuration of an external key manager

The following example shows how to update the `server_ca` configuration of an external key manager.

```

# The API:
PATCH /api/security/key-managers/{uuid}

# The call:
curl -X PATCH 'https://<mgmt-ip>/api/security/key-managers/<uuid>?' -H
'accept: application/hal+json' -d "{ \"external\": {
  \"server_ca_certificates\": [ { \"uuid\": \"23b05c58-d790-11e8-b5bf-005056bb017d\" } ] } }"

```

## Updating the passphrase of an Onboard Key Manager

The following example shows how to update the passphrase of a given key manager.

```
# The API:
PATCH /api/security/key-managers/{uuid}

# The call:
curl -X PATCH 'https://<mgmt-ip>/api/security/key-managers/<uuid>?' -H
'accept: application/hal+json' -d "{ \"onboard\": {
\"existing_passphrase\": \"existing_passphrase\", \"passphrase\":
\"new_passphrase\" } }"
```

---

## Synchronizing the passphrase of the Onboard Key Manager on a cluster

The following example shows how to synchronize the passphrase on a cluster where the Onboard Key Manager is already configured.

```
# The API:
PATCH /api/security/key-managers/{uuid}

# The call:
curl -X PATCH 'https://<mgmt-ip>/api/security/key-managers/<uuid>?' -H
'accept: application/hal+json' -d "{ \"onboard\": {
\"existing_passphrase\": \"existing_passphrase\",      \"synchronize\": true
} }"
```

---

## Configuring the Onboard Key Manager on a cluster

The following example shows how to configure the Onboard Key Manager on a cluster where the Onboard Key Manager is not configured, but is configured on an MetroCluster partner cluster.

```
# The API:
POST /api/security/key-managers

# The call:
curl -X POST 'https://<mgmt-ip>/api/security/key-
managers?return_records=false' -H 'accept: application/hal+json' -H
"Content-Type: application/json" -d "{ \"onboard\": {      \"passphrase\":
\"passphrase\",      \"synchronize\": true } }"
```

## Deleting a configured key manager

The following example shows how to delete a key manager given its UUID.

```
# The API:
DELETE /api/security/key-managers/{uuid}

# The call:
curl -X DELETE 'https://<mgmt-ip>/api/security/key-managers/<uuid>?' -H
'accept: application/hal+json'
```

## Adding a primary key server to an external key manager

The following example shows how to add a primary key server to an external key manager.

```
# The API:
POST /api/security/key-managers/{uuid}/key-servers

# The call:
curl -X POST 'https://<mgmt-ip>/api/security/key-managers/<uuid>/key-
servers?return_records=true' -H 'accept: application/hal+json' -d "{
  \"server\": \"10.225.89.34:5696\" }"

# The response:
{
  "num_records": 1,
  "records": [
    {
      "server": "10.225.89.34:5696",
      "_links": {
        "self": {
          "href": "/api/security/key-managers/43e0c191-dc5c-11e8-9b2c-
005056bb017d/key-servers/10.225.89.34%3A5696"
        }
      }
    }
  ]
}
```

## Adding 2 primary key servers to an external key manager

The following example shows how to add 2 primary key servers to an external key manager. Note that the *records* property is used to add multiple primary key servers to the key manager in a single API call.

```
# The API:
POST /api/security/key-managers/{uuid}/key-servers

# The call:
curl -X POST 'https://<mgmt-ip>/api/security/key-managers/<uuid>/key-servers?return_records=true' -H 'accept: application/hal+json' -d '{"records": [ { "server": "10.225.89.34:5696" }, { "server": "10.225.89.33:5696" } ] }'

# The response:
{
  "num_records": 1,
  "records": [
    {
      "_links": {
        "self": {
          "href": "/api/security/key-managers/43e0c191-dc5c-11e8-9b2c-005056bb017d/key-servers/"
        }
      }
    }
  ]
}
```

## Retrieving all the key servers configured in an external key manager

The following example shows how to retrieve all key servers configured in an external key manager.

```
# The API:
GET /api/security/key-managers/{uuid}/key-servers

# The call:
curl -X GET 'https://<mgmt-ip>/api/security/key-managers/<uuid>/key-servers?fields=*' -H 'accept: application/hal+json'

# The response:
{
  "records": [
    {
      "uuid": "43e0c191-dc5c-11e8-9b2c-005056bb017d",
      "server": "10.225.89.33:5696",
      "timeout": 25,
      "username": "",

```

```

    "secondary_key_servers": [
      "1.1.1.1",
      "secondarykeyserver.com"
    ],
    "_links": {
      "self": {
        "href": "/api/security/key-managers/43e0c191-dc5c-11e8-9b2c-005056bb017d/key-servers/10.225.89.33%3A5696"
      }
    }
  },
  {
    "uuid": "43e0c191-dc5c-11e8-9b2c-005056bb017d",
    "server": "10.225.89.34:5696",
    "timeout": 25,
    "username": "",
    "_links": {
      "self": {
        "href": "/api/security/key-managers/43e0c191-dc5c-11e8-9b2c-005056bb017d/key-servers/10.225.89.34%3A5696"
      }
    }
  }
],
"num_records": 2,
"_links": {
  "self": {
    "href": "/api/security/key-managers/43e0c191-dc5c-11e8-9b2c-005056bb017d/key-servers?fields=*"
  }
}
}

```

### Retrieving a specific primary key server (and any associated secondary key servers) configured in an external key manager

The following example shows how to retrieve a specific primary key server (and any associated secondary key servers) configured in an external key manager.

```
# The API:
GET /api/security/key-managers/{uuid}/key-servers/{server}

# The call:
curl -X GET 'https://<mgmt-ip>/api/security/key-managers/<uuid>/key-servers/{server}?fields=*' -H 'accept: application/hal+json'

# The response:
{
  "uuid": "43e0c191-dc5c-11e8-9b2c-005056bb017d",
  "server": "10.225.89.34:5696",
  "timeout": 25,
  "username": "",
  "secondary_key_servers": [
    "1.1.1.1",
    "secondarykeyserver.com"
  ],
  "_links": {
    "self": {
      "href": "/api/security/key-managers/43e0c191-dc5c-11e8-9b2c-005056bb017d/key-servers/10.225.89.34:5696"
    }
  }
}
```

---

### Updating a specific primary key server configuration configured in an external key manager

The following example shows how to update a specific primary key server configured in an external key manager.

```
# The API:
PATCH /api/security/key-managers/{uuid}/key-servers/{server}

# The call:
curl -X PATCH 'https://<mgmt-ip>/api/security/key-managers/<uuid>/key-servers/{server}' -H 'accept: application/hal+json' -d '{"timeout": 45}'
```

---

**When the 'secondary\_key\_servers' field is populated in the PATCH API, the list of secondary key servers**

associated with the primary key servers is replaced by the list of secondary key servers specified in the

'secondary\_key\_servers' field.

The following example shows how to update the set of secondary key servers associated with a primary key server.

```
# The API:
PATCH /api/security/key-managers/{uuid}/key-servers/{server}

# The call:
curl -X PATCH 'https://<mgmt-ip>/api/security/key-managers/<uuid>/key-servers/{server}' -H 'accept: application/hal+json' -d "{
  \"secondary_key_servers\": [ \"1.1.1.1\", \"secondarykeyserver.com\" ] }"
```

---

### Deleting a primary key server from an external key manager

The following example shows how to delete a primary key server from an external key manager.

```
# The API:
DELETE /api/security/key-managers/{uuid}/key-servers/{server}

# The call:
curl -X DELETE 'https://<mgmt-ip>/api/security/key-managers/<uuid>/key-servers/{server}' -H 'accept: application/hal+json'
```

---

### Bypass the out of quorum checks when deleting a primary key server from an external key manager

The following example shows how to bypass the out of quorum checks when deleting a primary key server from an external key manager.

```
# The API:
DELETE /api/security/key-managers/{uuid}/key-servers/{server}

# The call:
curl -X DELETE 'https://<mgmt-ip>/api/security/key-managers/<uuid>/key-servers/{server}?force=true' -H 'accept: application/hal+json'
```

# Retrieve key managers

GET /security/key-managers

Introduced In: 9.6

Retrieves key managers.

## Expensive properties

There is an added cost to retrieving values for these properties. They are not included by default in GET results and must be explicitly requested using the `fields` query parameter. See [Requesting specific fields](#) to learn more.

- `status.message`
- `status.code`

## Related ONTAP commands

- `security key-manager show-key-store`
- `security key-manager external show`
- `security key-manager external show-status`
- `security key-manager onboard show-backup`

## Parameters

Name	Type	In	Required	Description
svm.uuid	string	query	False	Filter by svm.uuid
svm.name	string	query	False	Filter by svm.name
scope	string	query	False	Filter by scope
onboard.key_backup	string	query	False	Filter by onboard.key_backup <ul style="list-style-type: none"><li>• Introduced in: 9.7</li></ul>
onboard.enabled	boolean	query	False	Filter by onboard.enabled

Name	Type	In	Required	Description
volume_encryption.code	integer	query	False	Filter by volume_encryption.code  • Introduced in: 9.7
volume_encryption.message	string	query	False	Filter by volume_encryption.message  • Introduced in: 9.7
volume_encryption.supported	boolean	query	False	Filter by volume_encryption.supported  • Introduced in: 9.7
uuid	string	query	False	Filter by uuid
is_default_data_at_rest_encryption_disabled	boolean	query	False	Filter by is_default_data_at_rest_encryption_disabled  • Introduced in: 9.7
policy	string	query	False	Filter by policy  • Introduced in: 9.9
external.servers.timeout	integer	query	False	Filter by external.servers.timeout  • Max value: 60 • Min value: 1
external.servers.secondary_key_servers	string	query	False	Filter by external.servers.secondary_key_servers  • Introduced in: 9.8

Name	Type	In	Required	Description
external.servers.user name	string	query	False	Filter by external.servers.use rname
external.servers.serv er	string	query	False	Filter by external.servers.ser ver
external.client_certifi cate.name	string	query	False	Filter by external.client_certifi cate.name  • Introduced in: 9.8
external.client_certifi cate.uuid	string	query	False	Filter by external.client_certifi cate.uuid
external.server_ca_c ertificates.name	string	query	False	Filter by external.server_ca_ certificates.name  • Introduced in: 9.8
external.server_ca_c ertificates.uuid	string	query	False	Filter by external.server_ca_ certificates.uuid
status.code	integer	query	False	Filter by status.code  • Introduced in: 9.7
status.message	string	query	False	Filter by status.message  • Introduced in: 9.7
fields	array[string]	query	False	Specify the fields to return.
max_records	integer	query	False	Limit the number of records returned.

Name	Type	In	Required	Description
return_timeout	integer	query	False	<p>The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached.</p> <ul style="list-style-type: none"> <li>• Max value: 120</li> <li>• Min value: 0</li> <li>• Default value: 1</li> </ul>
return_records	boolean	query	False	<p>The default is true for GET calls. When set to false, only the number of records is returned.</p> <ul style="list-style-type: none"> <li>• Default value: 1</li> </ul>
order_by	array[string]	query	False	Order results by specified fields and optional [asc

key\_server\_readcreate

Name	Type	Description
_links	<a href="#">self_link</a>	
secondary_key_servers	string	A comma delimited string of the secondary key servers associated with the primary key server.
server	string	External key server for key management. If no port is provided, a default port of 5696 is used.
timeout	integer	I/O timeout in seconds for communicating with the key server.
username	string	Username credentials for connecting with the key server.

external

Configures external key management

Name	Type	Description
client_certificate	<a href="#">client_certificate</a>	Client certificate
server_ca_certificates	array[ <a href="#">server_ca_certificates</a> ]	The UUIDs of the server CA certificates already installed in the cluster or SVM. The array of certificates are common for all the key servers per SVM.
servers	array[ <a href="#">key_server_readcreate</a> ]	The set of external key servers.

onboard

Configures onboard key management. After configuring onboard key management, save the encrypted configuration data in a safe location so that you can use it if you need to perform a manual recovery operation.

Name	Type	Description
enabled	boolean	Is the onboard key manager enabled?
existing_passphrase	string	The cluster-wide passphrase. This is not audited.

Name	Type	Description
key_backup	string	Backup of the onboard key manager's key hierarchy. It is required to save this backup after configuring the onboard key manager to help in the recovery of the cluster in case of catastrophic failures.

#### status

Optional status information on the current state of the key manager indicating if it is fully setup or requires more action.

Name	Type	Description
code	integer	Code corresponding to the status message. Returns 0 if the setup is complete. This is an advanced property; there is an added cost to retrieving its value. The property is not populated for either a collection GET or an instance GET unless it is explicitly requested using the <code>fields</code> query parameter or GET for all advanced properties is enabled.
message	string	Current state of the key manager indicating any additional steps to perform to finish the setup. This is an advanced property; there is an added cost to retrieving its value. The property is not populated for either a collection GET or an instance GET unless it is explicitly requested using the <code>fields</code> query parameter or GET for all advanced properties is enabled.

#### svm

Name	Type	Description
<a href="#">_links</a>	<a href="#">_links</a>	
name	string	The name of the SVM.

Name	Type	Description
uuid	string	The unique identifier of the SVM.

#### volume\_encryption

Indicates whether volume encryption is supported in the cluster.

Name	Type	Description
code	integer	Code corresponding to the status message. Returns a 0 if volume encryption is supported in all nodes of the cluster.
message	string	Reason for not supporting volume encryption.
supported	boolean	Set to true when volume encryption support is available on all nodes of the cluster.

#### security\_key\_manager

Name	Type	Description
_links	<a href="#">_links</a>	
external	<a href="#">external</a>	Configures external key management
is_default_data_at_rest_encryption_disabled	boolean	Indicates whether default data-at-rest encryption is disabled in the cluster. This field is deprecated in ONTAP 9.8 and later. Use the "software_data_encryption.disabled_by_default" of /api/security endpoint. <ul style="list-style-type: none"> <li>• Default value:</li> <li>• Introduced in: 9.7</li> <li>• x-ntap-readModify: true</li> </ul>
onboard	<a href="#">onboard</a>	Configures onboard key management. After configuring onboard key management, save the encrypted configuration data in a safe location so that you can use it if you need to perform a manual recovery operation.

Name	Type	Description
policy	string	Security policy associated with the key manager. This value is currently ignored if specified for the onboard key manager.
scope	string	Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster".
status	<a href="#">status</a>	Optional status information on the current state of the key manager indicating if it is fully setup or requires more action.
svm	<a href="#">svm</a>	
uuid	string	
volume_encryption	<a href="#">volume_encryption</a>	Indicates whether volume encryption is supported in the cluster.

#### error\_arguments

Name	Type	Description
code	string	Argument code
message	string	Message argument

#### error

Name	Type	Description
arguments	array[ <a href="#">error_arguments</a> ]	Message arguments
code	string	Error code
message	string	Error message
target	string	The target parameter that caused the error.

## Create a key manager

POST /security/key-managers

**Introduced In:** 9.6

Creates a key manager.

## Required properties

- `svm.uuid` or `svm.name` - Existing SVM in which to create a key manager.
- `external.client_certificate` - Client certificate. Required only when creating an external key manager.
- `external.server_ca_certificates` - Server CA certificates. Required only when creating an external key manager.
- `external.servers.server` - Primary Key servers. Required only when creating an external key manager.
- `onboard.passphrase` - Cluster-wide passphrase. Required only when creating an Onboard Key Manager.
- `synchronize` - Synchronizes missing onboard keys on any node in the cluster. Required only when creating an Onboard Key Manager at the partner site of a MetroCluster configuration.

## Related ONTAP commands

- `security key-manager external enable`
- `security key-manager onboard enable`
- `security key-manager onboard sync`

## Parameters

Name	Type	In	Required	Description
<code>return_records</code>	boolean	query	False	The default is false. If set to true, the records are returned.  • Default value:

## Request Body

## Error

Status: Default

### ONTAP Error Response Codes

Error Code	Description
65536038	A maximum of 4 active primary key servers are allowed.
65536214	Failed to generate cluster key encryption key.
65536216	Failed to add cluster key encryption key.
65536310	Failed to setup the Onboard Key Manager because the MetroCluster peer is unhealthy.
65536341	Failed to setup the Onboard Key Manager because the MetroCluster peer is unhealthy.

Error Code	Description
65536508	The platform does not support data at rest encryption.
65536821	The certificate is not installed.
65536822	Multitenant key management is not supported in the current cluster version.
65536823	The SVM has key manager already configured.
65536824	Multitenant key management is not supported in MetroCluster configurations.
65536834	Failed to get existing key-server details for the SVM.
65536852	Failed to query supported KMIP protocol versions.
65536870	Key management servers already configured.
65536871	Duplicate key management servers exist.
65536876	External key management requires client and server CA certificates installed and with one or more key servers provided.
65536878	External key management cannot be configured as one or more volume encryption keys of the SVM are stored in cluster key management server.
65536895	External key manager cannot be configured since this cluster is part of a MetroCluster configuration and the partner site of this MetroCluster configuration has Onboard Key Manager configured.
65536900	The Onboard Key Manager cannot be configured because this cluster is part of a MetroCluster configuration and the partner site has the external key manager configured.
65536903	The Onboard Key Manager has failed to configure on some nodes in the cluster. Use the CLI to sync the Onboard Key Manager configuration on failed nodes.
65536906	The Onboard Key Manager has already been configured at the partner site. Use the CLI to sync the Onboard Key Manager with the same passphrase.
65536907	The Onboard Key Manager is already configured. Use the CLI to sync any nodes with the Onboard Key Manager configuration.
65536916	The Onboard Key Manager is only supported for an admin SVM.
65536920	The Onboard Key Manager passphrase length is incorrect.
65537240	The Onboard Key Manager passphrase must be provided when performing a POST/synchronize operation.

Error Code	Description
65537241	The Onboard Key Manager existing_passphrase must not be provided when performing a POST/synchronize operation.
65537244	Unable to sync/create Onboard Key Manager on the local cluster; Onboard Key Manager is already configured on the cluster.
65537245	Unable to sync/create Onboard Key Manager on the local cluster; Onboard Key Manager is not configured on the partner cluster.
65537246	Unable to sync/create Onboard Key Manager on local cluster. This cluster is not part of a MetroCluster configuration.
66060338	Failed to establish secure connection for a key management server due to incorrect server_ca certificates.
66060339	Failed to establish secure connection for a key management server due to incorrect client certificates.
66060340	Failed to establish secure connection for a key management server due to Cryptsoft error.

Name	Type	Description
client_certificate	<a href="#">client_certificate</a>	Client certificate
server_ca_certificates	array[ <a href="#">server_ca_certificates</a> ]	The UUIDs of the server CA certificates already installed in the cluster or SVM. The array of certificates are common for all the keyservers per SVM.
servers	array[ <a href="#">key_server_readcreate</a> ]	The set of external key servers.

## onboard

Configures onboard key management. After configuring onboard key management, save the encrypted configuration data in a safe location so that you can use it if you need to perform a manual recovery operation.

Name	Type	Description
enabled	boolean	Is the onboard key manager enabled?
existing_passphrase	string	The cluster-wide passphrase. This is not audited.
key_backup	string	Backup of the onboard key manager's key hierarchy. It is required to save this backup after configuring the onboard key manager to help in the recovery of the cluster in case of catastrophic failures.
passphrase	string	The cluster-wide passphrase. This is not audited.

Name	Type	Description
synchronize	boolean	Synchronizes missing onboard keys on any node in the cluster. If a node is added to a cluster that has onboard key management configured, the synchronize operation needs to be performed in a PATCH operation. In a MetroCluster configuration, if onboard key management is enabled on one site, then the synchronize operation needs to be run as a POST operation on the remote site providing the same passphrase.

#### status

Optional status information on the current state of the key manager indicating if it is fully setup or requires more action.

Name	Type	Description
code	integer	Code corresponding to the status message. Returns 0 if the setup is complete. This is an advanced property; there is an added cost to retrieving its value. The property is not populated for either a collection GET or an instance GET unless it is explicitly requested using the <code>fields</code> query parameter or GET for all advanced properties is enabled.
message	string	Current state of the key manager indicating any additional steps to perform to finish the setup. This is an advanced property; there is an added cost to retrieving its value. The property is not populated for either a collection GET or an instance GET unless it is explicitly requested using the <code>fields</code> query parameter or GET for all advanced properties is enabled.

#### svm

Name	Type	Description
name	string	The name of the SVM.
uuid	string	The unique identifier of the SVM.

#### volume\_encryption

Indicates whether volume encryption is supported in the cluster.

Name	Type	Description
code	integer	Code corresponding to the status message. Returns a 0 if volume encryption is supported in all nodes of the cluster.
message	string	Reason for not supporting volume encryption.
supported	boolean	Set to true when volume encryption support is available on all nodes of the cluster.

#### security\_key\_manager

Name	Type	Description
external	<a href="#">external</a>	Configures external key management
onboard	<a href="#">onboard</a>	Configures onboard key management. After configuring onboard key management, save the encrypted configuration data in a safe location so that you can use it if you need to perform a manual recovery operation.
policy	string	Security policy associated with the key manager. This value is currently ignored if specified for the onboard key manager.
svm	<a href="#">svm</a>	
uuid	string	

#### error\_arguments

Name	Type	Description
code	string	Argument code
message	string	Message argument

error

Name	Type	Description
arguments	array[ <a href="#">error_arguments</a> ]	Message arguments
code	string	Error code
message	string	Error message
target	string	The target parameter that caused the error.

## Delete key managers

DELETE /security/key-managers/{uuid}

**Introduced In:** 9.6

Deletes a key manager.

### Related ONTAP commands

- security key-manager external disable
- security key-manager onboard disable

### Parameters

Name	Type	In	Required	Description
uuid	string	path	True	Key manager UUID

### Response

Status: 200, Ok

## Error

Status: Default

### ONTAP Error Response Codes

Error Code	Description
65536208	Failed to delete the SVM Key ID.
65536233	Internal error. Deletion of km_wrapped_kdb key database has failed for the Onboard Key Manager.
65536234	Internal error. Deletion of cluster_kdb key database has failed for the Onboard Key Manager.
65536239	Encrypted volumes are found for the SVM.
65536242	One or more self-encrypting drives are assigned an authentication key.
65536243	Cannot determine authentication key presence on one or more self-encrypting drives.
65536800	Failed to lookup onboard keys.
65536813	Encrypted kernel core files found.
65536817	Failed to determine if key manager is safe to disable.
65536822	Multitenant key management is not supported in the current cluster version.
65536827	Failed to determine if the SVM has any encrypted volumes.
65536828	External key management is not enabled for the SVM.
65536867	Encrypted volumes are found for the SVM.
196608301	Failed to determine the type of encryption.
196608305	NAE aggregates are found in the cluster.

Name	Type	Description
error	<a href="#">error</a>	

## Example error

```
{
  "error": {
    "arguments": [
      {
        "code": "string",
        "message": "string"
      }
    ],
    "code": "4",
    "message": "entry doesn't exist",
    "target": "uuid"
  }
}
```

message	string	Error message
target	string	The target parameter that caused the error.

# Retrieve key managers

GET /security/key-managers/{uuid}

Introduced In: 9.6

Retrieves key managers.

## Expensive properties

There is an added cost to retrieving values for these properties. They are not included by default in GET results and must be explicitly requested using the `fields` query parameter. See [Requesting specific fields](#) to learn more.

- `status.message`
- `status.code`

## Related ONTAP commands

- `security key-manager show-key-store`
- `security key-manager external show`
- `security key-manager external show-status`
- `security key-manager onboard show-backup`

## Parameters

Name	Type	In	Required	Description
uuid	string	path	True	Key manager UUID
fields	array[string]	query	False	Specify the fields to return.

## Response

Status: 200, Ok

Name	Type	Description
<code>_links</code>	<a href="#">_links</a>	
<code>external</code>	<a href="#">external</a>	Configures external key management

Name	Type	Description
is_default_data_at_rest_encryption_disabled	boolean	<p>Indicates whether default data-at-rest encryption is disabled in the cluster. This field is deprecated in ONTAP 9.8 and later. Use the "software_data_encryption.disabled_by_default" of /api/security endpoint.</p> <ul style="list-style-type: none"> <li>• Default value: 1</li> <li>• Introduced in: 9.7</li> <li>• x-ntap-readModify: true</li> </ul>
onboard	<a href="#">onboard</a>	Configures onboard key management. After configuring onboard key management, save the encrypted configuration data in a safe location so that you can use it if you need to perform a manual recovery operation.
policy	string	Security policy associated with the key manager. This value is currently ignored if specified for the onboard key manager.
scope	string	Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster".
status	<a href="#">status</a>	Optional status information on the current state of the key manager indicating if it is fully setup or requires more action.
svm	<a href="#">svm</a>	
uuid	string	
volume_encryption	<a href="#">volume_encryption</a>	Indicates whether volume encryption is supported in the cluster.

target	string	The target parameter that caused the error.

## Update key managers

PATCH /security/key-managers/{uuid}

## Introduced In: 9.6

Updates a key manager.

## Required properties

- `onboard.existing_passphrase` - Cluster-wide passphrase. Required only when synchronizing the passphrase of the Onboard Key Manager.
- `synchronize` - Synchronizes missing Onboard Key Manager keys on any node in the cluster. Required only when synchronizing the Onboard Key Manager keys in a local cluster.

## Related ONTAP commands

- `security key-manager external modify`
- `security key-manager onboard sync`
- `security key-manager onboard update-passphrase`

## Parameters

Name	Type	In	Required	Description
uuid	string	path	True	Key manager UUID

## Request Body

Name	Type	Description
external	<a href="#">external</a>	Configures external key management

### ONTAP Error Response Codes

Error Code	Description
65536139	The existing passphrase value provided does not match the configured passphrase.
65536150	The new passphrase is same as old passphrase.
65536404	The passphrase does not match the accepted length.
65536406	The change of passphrase failed.
65536407	The passphrase update failed on some nodes.
65536802	The passphrase does not match the accepted length in common criteria mode.

Error Code	Description
65536821	The certificate is not installed.
65536822	Multitenant key management is not supported in the current cluster version.
65536828	External key management is not enabled for the SVM.
65536850	New client certificate public or private keys are different from the existing client certificate.
65536852	Failed to query supported KMIP protocol versions.
65536917	Updating an onboard passphrase requires both new and existing cluster passphrase.
65537242	The Onboard Key Manager existing_passphrase must be provided when performing a PATCH/synchronize operation.
65537243	The Onboard Key Manager passphrase must not be provided when performing a PATCH/synchronize operation.
66060338	Failed to establish secure connection for a key management server due to incorrect server_ca certificates.
66060339	Failed to establish secure connection for a key management server due to incorrect client certificates.
66060340	Failed to establish secure connection for a key management server due to Cryptsoft error.
