# Manage cluster NTP keys

## Cluster NTP keys endpoint overview

### Overview

You can configure NTP to use shared private keys between ONTAP and trusted external NTP time servers.

You acquire the keys from the external NTP time servers and individual entries created for each unique key. You can use the `/cluster/ntp/servers` API to associate a key with an external NTP time server used by ONTAP and enable authentication.

### Fields used for adding an NTP shared key

The required fields are:

- `id`
- `digest_type`
- `secret_key`

### Example

```
# Body
create_ntp_key.txt (body) :
{
  "id": 10,
  "digest_type": "sha1",
  "value": "da39a3ee5e6b4b0d3255bfeef95601890afd80709"
}

# Request
curl -X POST "https://<mgmt-ip>/api/cluster/ntp/keys" -d
"@create_ntp_key.txt"
```

## Retrieve NTP symmetric authentication keys

GET `/cluster/ntp/keys`

**Introduced In:** 9.7

Retrieves the collection of NTP symmetric authentication keys known by ONTAP that are uniquely indexed by an identifier.

### Related ONTAP commands

- `cluster time-service ntp key show`

## Learn more

- [DOC /cluster/ntp/keys](#)

## Parameters

Name	Type	In	Required	Description
value	string	query	False	Filter by value
digest_type	string	query	False	Filter by digest_type
id	integer	query	False	Filter by id <ul style="list-style-type: none"><li>• Max value: 65535</li><li>• Min value: 1</li></ul>
fields	array[string]	query	False	Specify the fields to return.
max_records	integer	query	False	Limit the number of records returned.
return_records	boolean	query	False	The default is true for GET calls. When set to false, only the number of records is returned. <ul style="list-style-type: none"><li>• Default value: 1</li></ul>
return_timeout	integer	query	False	The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached. <ul style="list-style-type: none"><li>• Max value: 120</li><li>• Min value: 0</li><li>• Default value: 1</li></ul>

Name	Type	In	Required	Description
order_by	array[string]	query	False	Order results by specified fields and optional [asc

## Response

Status: 200, Ok

Name	Type	Description
_links	<a href="#">_links</a>	
num_records	integer	Number of records.
records	array[ <a href="#">ntp_key</a> ]	

## Example response

```
{
  "_links": {
    "next": {
      "href": "/api/resourcelink"
    },
    "self": {
      "href": "/api/resourcelink"
    }
  },
  "num_records": 1,
  "records": {
    "_links": {
      "self": {
        "href": "/api/resourcelink"
      }
    },
    "digest_type": "sha1",
    "id": 10,
    "value": "da39a3ee5e6b4b0d3255bfef95601890afd80709"
  }
}
```

## Error

Status: Default, Error

Name	Type	Description
error	error	

### Example error

```
{
  "error": {
    "arguments": {
      "code": "string",
      "message": "string"
    },
    "code": "4",
    "message": "entry doesn't exist",
    "target": "uuid"
  }
}
```

target	string	The target parameter that caused the error.

## Create an NTP symmetric authentication key entry

POST `/cluster/ntp/keys`

**Introduced In:** 9.7

Creates an NTP symmetric authentication key entry including the type of key using an unused identifier or index number (ID).

### Required properties

- `id` - Shared symmetric key number (ID).
- `digest_type` - Shared private key cryptographic hash type.
- `value` - Value of shared private key.

### Related ONTAP commands

- `cluster time-service ntp key create`

### Learn more

## Update NTP symmetric authentication key details

PATCH `/cluster/ntp/keys/{id}`

**Introduced In:** 9.7

Updates the details of a specific NTP symmetric authentication key by numeric identifier or index (ID).

### Required properties

- `digest_type` - Shared private key cryptographic hash type.
- `value` - Value of shared private key.
