# Update user account password

# Security authentication password endpoint overview

## Overview

This API changes the password for a local user account.

Only cluster administrators with the "admin" role can change the password for other cluster or SVM user accounts. If you are not a cluster administrator, you can only change your own password.

## Examples

#### Changing the password of another cluster or SVM user account by a cluster administrator

Specify the user account name and the new password in the body of the POST request. The owner.uuid or owner.name are not required to be specified for a cluster-scoped user account.

For an SVM-scoped account, along with new password and user account name, specify either the SVM name as the owner.name or SVM uuid as the owner.uuid in the body of the POST request. These indicate the SVM for which the user account is created and can be obtained from the response body of a GET request performed on the */api/svm/svms* API.

```
# The API:
POST "/api/security/authentication/password"
# The call to change the password of another cluster user:
curl -X POST "https://<mgmt-ip>/api/security/authentication/password" -d
'{"name":"cluster_user1","password":"hello@1234"}'
```

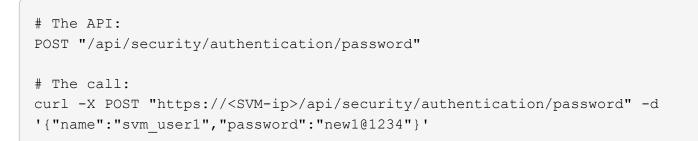

# The call to change the password of another SVM user: curl -X POST "https://<mgmt-ip>/api/security/authentication/password" -d '{"owner.name":"svm1","name":"svm user1","password":"hello@1234"}'

# The call to change the password hash algorithm of the cluster user: curl -X POST "https://<mgmt-ip>/api/security/authentication/password" -d '{"name":"cluster\_user1","password":"hello@1234","password\_hash\_algorithm" :"sha256"}'

# The call to change the password hash algorithm of another SVM user: curl -X POST "https://<mgmt-ip>/api/security/authentication/password" -d '{"owner.name":"svm1","name":"svm\_user1","password":"hello@1234","password hash algorithm":"sha256"}'

#### Changing the password of an SVM-scoped user

The IP address in the URI must be same as one of the interfaces owned by the SVM.

## Update the user account password

**POST** /security/authentication/password

#### Introduced In: 9.6

÷.

Updates the password for a user account.

## **Required parameters**

- name User account name.
- password New password for the user account.

## **Optional parameters**

- owner.name or owner.uuid Name or UUID of the SVM for an SVM-scoped user account.
- password\_hash\_algorithm Optional property that specifies the password hash algorithm used to generate a hash of the user's password for password matching. Default value is "sha512".

## **Parameters**

| Name           | Туре    | In    | Required | Description  |
|----------------|---------|-------|----------|--|
| return_records | boolean | query | False    | The default is false.<br>If set to true, the<br>records are<br>returned. |
|                |         |       |          | Default value:   |

## **Request Body**

| Name                    | Туре   | Description   |
|-------------------------|--------|---|
| name                    | string | The user account name whose password is being modified.   |
| owner                   | owner  | Owner name and UUID that<br>uniquely identifies the user<br>account. This field is optional and<br>valid only when a cluster<br>administrator is executing the API<br>to uniquely identify the account<br>whose password is being modified.<br>The "owner" field is not required to<br>be specified for SVM user accounts<br>trying to modify their password. |
| password                | string | The password string   |
| password_hash_algorithm | string | Optional property that specifies the<br>password hash algorithm used to<br>generate a hash of the user's<br>password for password matching.   |

#### Example request

```
{
    "owner": {
        "_links": {
            "self": {
                "href": "/api/resourcelink"
            }
        },
        "name": "svm1",
        "uuid": "02c9e252-41be-11e9-81d5-00a0986138f7"
    },
    "password_hash_algorithm": "sha512"
}
```

## Response

Status: 201, Created

#### Headers

| Name     | Description                               | Туре   |
|----------|---|--------|
| Location | Useful for tracking the resource location | string |

## Error

Status: Default

#### **ONTAP Error Response Codes**

| Error Code | Description   |
|------------|---|
| 7077918    | The password cannot contain the username.                                 |
| 7077919    | The minimum length for new password does not meet the policy.             |
| 7077920    | The new password must have both letters and numbers.                      |
| 7077921    | The minimum number of special characters required do not meet the policy. |
| 7077924    | The new password must be different than last N passwords.                 |

| Error Code | Description   |
|------------|---|
| 7077925    | The new password must be different to the old password.                             |
| 7077940    | The password exceeds maximum supported length.                                      |
| 7077941    | Defined password composition exceeds the maximum password length of 128 characters. |

| Name  | Туре  | Description |
|-------|-------|-------------|
| error | error |             |

### Example error

```
{
    "error": {
        "arguments": {
            "code": "string",
            "message": "string"
        },
        "code": "4",
        "message": "entry doesn't exist",
        "target": "uuid"
    }
}
```
