

Manage IPsec policies

ONTAP 9.14.1 REST API reference

NetApp
June 13, 2024

This PDF was generated from https://docs.netapp.com/us-en/ontap-restapi-9141/ontap/security_ipsec_policies_endpoint_overview.html on June 13, 2024. Always check docs.netapp.com for the latest.

Table of Contents

- Manage IPsec policies 1
 - Security IPsec policies endpoint overview 1
 - Retrieve IPsec policies 1
 - Create an IPsec policy 11
 - Delete an IPsec policy 25
 - Retrieve an IPsec policy 28
 - Update an IPsec policy 34

Manage IPsec policies

Security IPsec policies endpoint overview

Overview

The following operations are supported:

- Collection Get: GET security/ipsec/policies
- Creation Post: POST security/ipsec/policies
- Instance Get: GET security/ipsec/policies/uuid
- Instance Patch: PATCH security/ipsec/policies/uuid
- Instance Delete: DELETE security/ipsec/policies/uuid

Retrieve IPsec policies

GET /security/ipsec/policies

Introduced In: 9.8

Retrieves the collection of IPsec policies.

Related ONTAP commands

- `security ipsec policy show`

Parameters

| Name | Type | In | Required | Description |
|-----------------------|--------|-------|----------|--|
| local_identity | string | query | False | Filter by local_identity |
| protocol | string | query | False | Filter by protocol |
| authentication_method | string | query | False | Filter by authentication_method <ul style="list-style-type: none">• Introduced in: 9.10 |
| svm.uuid | string | query | False | Filter by svm.uuid |
| svm.name | string | query | False | Filter by svm.name |

| Name | Type | In | Required | Description |
|------------------------|---------|-------|----------|---|
| local_endpoint.port | string | query | False | Filter by local_endpoint.port |
| local_endpoint.netmask | string | query | False | Filter by local_endpoint.netmask |
| local_endpoint.address | string | query | False | Filter by local_endpoint.address |
| local_endpoint.family | string | query | False | Filter by local_endpoint.family |
| enabled | boolean | query | False | Filter by enabled |
| remote_identity | string | query | False | Filter by remote_identity |
| certificate.uuid | string | query | False | Filter by certificate.uuid • Introduced in: 9.10 |
| certificate.name | string | query | False | Filter by certificate.name • Introduced in: 9.10 |
| name | string | query | False | Filter by name |
| scope | string | query | False | Filter by scope |
| ipspace.uuid | string | query | False | Filter by ipspace.uuid |
| ipspace.name | string | query | False | Filter by ipspace.name |
| remote_endpoint.port | string | query | False | Filter by remote_endpoint.port |

| Name | Type | In | Required | Description |
|--------------------------|---------------|-------|----------|--|
| remote_endpoint.net mask | string | query | False | Filter by remote_endpoint.net mask |
| remote_endpoint.address | string | query | False | Filter by remote_endpoint.address |
| remote_endpoint.family | string | query | False | Filter by remote_endpoint.family |
| uuid | string | query | False | Filter by uuid |
| fields | array[string] | query | False | Specify the fields to return. |
| max_records | integer | query | False | Limit the number of records returned. |
| return_records | boolean | query | False | <p>The default is true for GET calls. When set to false, only the number of records is returned.</p> <ul style="list-style-type: none"> • Default value: 1 |
| return_timeout | integer | query | False | <p>The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached.</p> <ul style="list-style-type: none"> • Default value: 1 • Max value: 120 • Min value: 0 |

| Name | Type | In | Required | Description |
|----------|---------------|-------|----------|---|
| order_by | array[string] | query | False | Order results by specified fields and optional [asc |

Response

Status: 200, Ok

| Name | Type | Description |

certificate

Certificate for the IPsec policy.

| Name | Type | Description |
|--------|------------------------|------------------|
| _links | _links | |
| name | string | Certificate name |
| uuid | string | Certificate UUID |

ipspace

Applies to both SVM and cluster-scoped objects. Either the UUID or name may be supplied on input.

| Name | Type | Description |
|--------|------------------------|--------------|
| _links | _links | |
| name | string | IPspace name |
| uuid | string | IPspace UUID |

local_endpoint

Local endpoint for the IPsec policy.

| Name | Type | Description |
|---------|--------|---|
| address | string | IPv4 or IPv6 address |
| family | string | IPv4 or IPv6 |
| netmask | string | Input as netmask length (16) or IPv4 mask (255.255.0.0). For IPv6, the default value is 64 with a valid range of 1 to 127. Output is always netmask length. |
| port | string | Application port to be covered by the IPsec policy |

remote_endpoint

Remote endpoint for the IPsec policy.

| Name | Type | Description |
|---------|--------|---|
| address | string | IPv4 or IPv6 address |
| family | string | IPv4 or IPv6 |
| netmask | string | Input as netmask length (16) or IPv4 mask (255.255.0.0). For IPv6, the default value is 64 with a valid range of 1 to 127. Output is always netmask length. |
| port | string | Application port to be covered by the IPsec policy |

svm

SVM, applies only to SVM-scoped objects.

| Name | Type | Description |
|--------|------------------------|---|
| _links | _links | |
| name | string | The name of the SVM. This field cannot be specified in a PATCH method. |
| uuid | string | The unique identifier of the SVM. This field cannot be specified in a PATCH method. |

records

IPsec policy object.

| Name | Type | Description |
|-----------------------|---------------------------------|---|
| action | string | Action for the IPsec policy. |
| authentication_method | string | Authentication method for the IPsec policy. |
| certificate | certificate | Certificate for the IPsec policy. |
| enabled | boolean | Indicates whether or not the policy is enabled. |
| ipspace | ipspace | Applies to both SVM and cluster-scoped objects. Either the UUID or name may be supplied on input. |
| local_endpoint | local_endpoint | Local endpoint for the IPsec policy. |
| local_identity | string | Local Identity |
| name | string | IPsec policy name. |
| protocol | string | Lower layer protocol to be covered by the IPsec policy. |
| remote_endpoint | remote_endpoint | Remote endpoint for the IPsec policy. |

| Name | Type | Description |
|-----------------|---------------------|---|
| remote_identity | string | Remote Identity |
| scope | string | Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster". |
| secret_key | string | Pre-shared key for IKE negotiation. |
| svm | svm | SVM, applies only to SVM-scoped objects. |
| uuid | string | Unique identifier of the IPsec policy. |

returned_error

| Name | Type | Description |
|-----------|--|---|
| arguments | array[error_arguments] | Message arguments |
| code | string | Error code |
| message | string | Error message |
| target | string | The target parameter that caused the error. |

Create an IPsec policy

POST /security/ipsec/policies

Introduced In: 9.8

Creates an IPsec policy.

Related ONTAP commands

- `security ipsec policy create`

Parameters

| Name | Type | In | Required | Description |
|----------------|---------|-------|----------|---|
| return_records | boolean | query | False | <p>The default is false. If set to true, the records are returned.</p> <ul style="list-style-type: none"> • Default value: |

Request Body

| Name | Type | Description |
|-----------------------|---------------------------------|---|
| action | string | Action for the IPsec policy. |
| authentication_method | string | Authentication method for the IPsec policy. |
| certificate | certificate | Certificate for the IPsec policy. |
| enabled | boolean | Indicates whether or not the policy is enabled. |
| ipspace | ipspace | Applies to both SVM and cluster-scoped objects. Either the UUID or name may be supplied on input. |
| local_endpoint | local_endpoint | Local endpoint for the IPsec policy. |
| local_identity | string | Local Identity |
| name | string | IPsec policy name. |
| protocol | string | Lower layer protocol to be covered by the IPsec policy. |
| remote_endpoint | remote_endpoint | Remote endpoint for the IPsec policy. |
| remote_identity | string | Remote Identity |
| scope | string | Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster". |
| secret_key | string | Pre-shared key for IKE negotiation. |

| Name | Type | Description |
|------|---------------------|--|
| svm | svm | SVM, applies only to SVM-scoped objects. |
| uuid | string | Unique identifier of the IPsec policy. |

Error

Status: Default

ONTAP Error Response Codes

| Error Code | Description |
|------------|--|
| 66257099 | Only one protocol can be specified. |
| 66257100 | Only one local port can be specified. |
| 66257101 | Only one remote port can be specified. |
| 66257104 | IPsec policy with same name already exists in this SVM. |
| 66257107 | The specified pre-shared key is not a valid hexadecimal string. |
| 66257109 | The specified pre-shared key is not a valid Base64 encoded binary string. |
| 66257110 | Failed to a create policy sequencing value. |
| 66257111 | The IPsec policy with action ESP TRANSPORT provides packet protection and requires a secret key or certificate for authentication. |
| 66257112 | The IPsec policy with the action specified does not provide packet protection and the authentication method provided for the policy will be ignored. |
| 66257113 | Only one local IP subnet can be specified. |
| 66257114 | Only one remote IP subnet can be specified. |
| 66257115 | Port ranges containing more than one port are not supported. |
| 66257117 | IPsec is not supported on the SVM specified in the policy, IPsec is supported on data SVMs only. |
| 66257120 | The subnet selector must be a host address (An IPv4 address with a 32-bit netmask or an IPv6 address with a 128-bit netmask). |
| 66257121 | The maximum limit of IPsec Policies has reached for the specified SVM. |
| 66257125 | The local_endpoint.address must be specified with local_endpoint.netmask. |
| 66257126 | The remote_endpoint.address must be specified with remote_endpoint.netmask. |
| 66257127 | The local subnet must be configured as a non-zero subnet. |
| 66257128 | Invalid ANY wildcard subnet. |
| 66257129 | A specific local or remote port number is required when the remote subnet is configured as an ANY wildcard subnet. |
| 66257132 | Invalid value for port field. Value should be in range <0-65535>. |

| Error Code | Description |
|------------|--|
| 66257133 | A pre-shared key is needed for the PSK authentication method. Use the secret_key option to specify a key. |
| 66257134 | An end-entity certificate is needed for the PKI authentication method. Use the certificate.uuid option to specify an end-entity certificate. |
| 66257137 | A pre-shared key is not needed for the PKI authentication method. |
| 66257139 | Certificate with the specified UUID was not found. |
| 66257140 | Only certificates with a client or server type are supported. |
| 66257202 | The specified SVM name is invalid. |
| 66257203 | The specified SVM UUID is invalid. |
| 66257204 | The specified IPspace UUID and IPspace name refer to different IPspaces. |
| 66257205 | The specified SVM must exist in the specified IPspace. |
| 66257396 | IPsec is not supported for the admin SVM in a MetroCluster configuration. |

| name | string | Certificate name |
| uuid | string | Certificate UUID |

ipspace

Applies to both SVM and cluster-scoped objects. Either the UUID or name may be supplied on input.

| Name | Type | Description |
|--------|------------------------|--------------|
| _links | _links | |
| name | string | IPspace name |
| uuid | string | IPspace UUID |

local_endpoint

Local endpoint for the IPsec policy.

| Name | Type | Description |
|---------|--------|----------------------|
| address | string | IPv4 or IPv6 address |
| family | string | IPv4 or IPv6 |

| Name | Type | Description |
|---------|--------|---|
| netmask | string | Input as netmask length (16) or IPv4 mask (255.255.0.0). For IPv6, the default value is 64 with a valid range of 1 to 127. Output is always netmask length. |
| port | string | Application port to be covered by the IPsec policy |

remote_endpoint

Remote endpoint for the IPsec policy.

| Name | Type | Description |
|---------|--------|---|
| address | string | IPv4 or IPv6 address |
| family | string | IPv4 or IPv6 |
| netmask | string | Input as netmask length (16) or IPv4 mask (255.255.0.0). For IPv6, the default value is 64 with a valid range of 1 to 127. Output is always netmask length. |
| port | string | Application port to be covered by the IPsec policy |

svm

SVM, applies only to SVM-scoped objects.

| Name | Type | Description |
|--------|------------------------|---|
| _links | _links | |
| name | string | The name of the SVM. This field cannot be specified in a PATCH method. |
| uuid | string | The unique identifier of the SVM. This field cannot be specified in a PATCH method. |

ipsec_policy

IPsec policy object.

| Name | Type | Description |
|-----------------------|---------------------------------|---|
| action | string | Action for the IPsec policy. |
| authentication_method | string | Authentication method for the IPsec policy. |
| certificate | certificate | Certificate for the IPsec policy. |
| enabled | boolean | Indicates whether or not the policy is enabled. |
| ipspace | ipspace | Applies to both SVM and cluster-scoped objects. Either the UUID or name may be supplied on input. |
| local_endpoint | local_endpoint | Local endpoint for the IPsec policy. |
| local_identity | string | Local Identity |
| name | string | IPsec policy name. |
| protocol | string | Lower layer protocol to be covered by the IPsec policy. |
| remote_endpoint | remote_endpoint | Remote endpoint for the IPsec policy. |
| remote_identity | string | Remote Identity |
| scope | string | Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster". |
| secret_key | string | Pre-shared key for IKE negotiation. |
| svm | svm | SVM, applies only to SVM-scoped objects. |
| uuid | string | Unique identifier of the IPsec policy. |

Delete an IPsec policy

DELETE /security/ipsec/policies/{uuid}

Introduced In: 9.8

Deletes a specific IPsec policy.

Related ONTAP commands

- `security ipsec policy delete`

Parameters

| Name | Type | In | Required | Description |
|------|--------|------|----------|-------------------|
| uuid | string | path | True | IPsec policy UUID |

Response

Status: 200, Ok

Error

Status: Default

ONTAP Error Response Codes

| Error Code | Description |
|------------|---|
| 66257096 | Internal error. Failed to purge connections associated with the IPsec policy. |
| 66257116 | IPsec policy with the specified UUID was not found. |

Also see the table of common errors in the [Response body](#) overview section of this documentation.

| Name | Type | Description |
|-------|--------------------------------|-------------|
| error | returned_error | |

Example error

```
{
  "error": {
    "arguments": [
      {
        "code": "string",
        "message": "string"
      }
    ],
    "code": "4",
    "message": "entry doesn't exist",
    "target": "uuid"
  }
}
```

error_arguments

| Name | Type | Description |
|---------|--------|------------------|
| code | string | Argument code |
| message | string | Message argument |

returned_error

| Name | Type | Description |
|-----------|--|---|
| arguments | array[error_arguments] | Message arguments |
| code | string | Error code |
| message | string | Error message |
| target | string | The target parameter that caused the error. |

Retrieve an IPsec policy

GET /security/ipsec/policies/{uuid}

Introduced In: 9.8

Retrieves a specific IPsec policy.

Related ONTAP commands

- `security ipsec policy show`

Parameters

| Name | Type | In | Required | Description |
|--------|---------------|-------|----------|-------------------------------|
| uuid | string | path | True | IPsec policy UUID |
| fields | array[string] | query | False | Specify the fields to return. |

Response

Status: 200, Ok

| Name | Type | Description |
|-----------------------|--------------------------------|---|
| action | string | Action for the IPsec policy. |
| authentication_method | string | Authentication method for the IPsec policy. |
| certificate | certificate | Certificate for the IPsec policy. |
| enabled | boolean | Indicates whether or not the policy is enabled. |
| ipspace | ipspace | Applies to both SVM and cluster-scoped objects. Either the UUID or name may be supplied on input. |
| local_endpoint | local_endpoint | Local endpoint for the IPsec policy. |
| local_identity | string | Local Identity |
| name | string | IPsec policy name. |

| Name | Type | Description |
|-----------------|---------------------------------|---|
| protocol | string | Lower layer protocol to be covered by the IPsec policy. |
| remote_endpoint | remote_endpoint | Remote endpoint for the IPsec policy. |
| remote_identity | string | Remote Identity |
| scope | string | Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster". |
| secret_key | string | Pre-shared key for IKE negotiation. |
| svm | svm | SVM, applies only to SVM-scoped objects. |
| uuid | string | Unique identifier of the IPsec policy. |

Example response

```
{
  "action": "string",
  "authentication_method": "string",
  "certificate": {

href

| Name | Type | Description |
|------|--------|-------------|
| href | string | |

_links

| Name | Type | Description |
|------|----------------------|-------------|
| self | href | |

certificate

Certificate for the IPsec policy.

| Name | Type | Description |
|--------|------------------------|------------------|
| _links | _links | |
| name | string | Certificate name |
| uuid | string | Certificate UUID |

ipspace

Applies to both SVM and cluster-scoped objects. Either the UUID or name may be supplied on input.

| Name | Type | Description |
|--------|------------------------|--------------|
| _links | _links | |
| name | string | IPspace name |
| uuid | string | IPspace UUID |

local_endpoint

Local endpoint for the IPsec policy.

| Name | Type | Description |
|---------|--------|----------------------|
| address | string | IPv4 or IPv6 address |
| family | string | IPv4 or IPv6 |

| Name | Type | Description |
|---------|--------|---|
| netmask | string | Input as netmask length (16) or IPv4 mask (255.255.0.0). For IPv6, the default value is 64 with a valid range of 1 to 127. Output is always netmask length. |
| port | string | Application port to be covered by the IPsec policy |

remote_endpoint

Remote endpoint for the IPsec policy.

| Name | Type | Description |
|---------|--------|---|
| address | string | IPv4 or IPv6 address |
| family | string | IPv4 or IPv6 |
| netmask | string | Input as netmask length (16) or IPv4 mask (255.255.0.0). For IPv6, the default value is 64 with a valid range of 1 to 127. Output is always netmask length. |
| port | string | Application port to be covered by the IPsec policy |

svm

SVM, applies only to SVM-scoped objects.

| Name | Type | Description |
|--------|------------------------|---|
| _links | _links | |
| name | string | The name of the SVM. This field cannot be specified in a PATCH method. |
| uuid | string | The unique identifier of the SVM. This field cannot be specified in a PATCH method. |

error_arguments

| Name | Type | Description |
|---------|--------|------------------|
| code | string | Argument code |
| message | string | Message argument |

returned_error

| Name | Type | Description |
|-----------|--|---|
| arguments | array[error_arguments] | Message arguments |
| code | string | Error code |
| message | string | Error message |
| target | string | The target parameter that caused the error. |

Update an IPsec policy

PATCH /security/ipsec/policies/{uuid}

Introduced In: 9.8

Updates a specific IPsec policy.

Related ONTAP commands

- `security ipsec policy modify`

Parameters

| Name | Type | In | Required | Description |
|------|--------|------|----------|-------------------|
| uuid | string | path | True | IPsec policy UUID |

Request Body

| Name | Type | Description |
|-----------------------|--------|---|
| action | string | Action for the IPsec policy. |
| authentication_method | string | Authentication method for the IPsec policy. |

| Name | Type | Description |
|-----------------|---------------------------------|---|
| certificate | certificate | Certificate for the IPsec policy. |
| enabled | boolean | Indicates whether or not the policy is enabled. |
| ipspace | ipspace | Applies to both SVM and cluster-scoped objects. Either the UUID or name may be supplied on input. |
| local_endpoint | local_endpoint | Local endpoint for the IPsec policy. |
| local_identity | string | Local Identity |
| name | string | IPsec policy name. |
| protocol | string | Lower layer protocol to be covered by the IPsec policy. |
| remote_endpoint | remote_endpoint | Remote endpoint for the IPsec policy. |
| remote_identity | string | Remote Identity |
| scope | string | Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster". |
| secret_key | string | Pre-shared key for IKE negotiation. |
| svm | svm | SVM, applies only to SVM-scoped objects. |
| uuid | string | Unique identifier of the IPsec policy. |

Example request

```
{
  "action": "string",
  "authentication_method": "string",
  "certificate": {
    "_links": {
      "self": {
        "href": "/api/resourcelink"

}

```

Response

Status: 200, Ok

Error

Status: Default

ONTAP Error Response Codes

| Error Code | Description |
|------------|---|
| 66257097 | Internal error. Failed to update the IPsec policy. |
| 66257099 | Only one protocol can be specified. |
| 66257100 | Only one local port can be specified. |
| 66257101 | Only one remote port can be specified. |
| 66257110 | Failed to create a policy sequencing value. |
| 66257113 | Only one local IP subnet can be specified. |
| 66257114 | Only one remote IP subnet can be specified. |
| 66257115 | Port ranges containing more than one port are not supported. |
| 66257116 | IPsec policy with the specified UUID was not found. |
| 66257120 | The subnet selector must be a host address (An IPv4 address with a 32-bit netmask or an IPv6 address with a 128-bit netmask). |
| 66257127 | The local subnet must be configured as a non-zero subnet. |
| 66257128 | Invalid ANY wildcard subnet. |
| 66257129 | A specific local or remote port number is required when the remote subnet is configured as an ANY wildcard subnet. |
| 66257139 | Certificate with the specified UUID was not found. |

| Error Code | Description |
|------------|---|
| 66257140 | Only certificates with a client or server type are supported. |

Also see the table of common errors in the [Response body](#) overview section of this documentation.

| Name | Type | Description |
|-------|--------------------------------|-------------|
| error | returned_error | |

Example error

```
{
  "error": {
    "arguments": [
      {
        "code": "string",
        "message": "string"
      }
    ],
    "code": "4",
    "message": "entry doesn't exist",
    "target": "uuid"
  }
}
```

Certificate for the IPsec policy.

| Name | Type | Description |
|--------|------------------------|------------------|
| _links | _links | |
| name | string | Certificate name |
| uuid | string | Certificate UUID |

ipspace

Applies to both SVM and cluster-scoped objects. Either the UUID or name may be supplied on input.

| Name | Type | Description |
|--------|------------------------|--------------|
| _links | _links | |
| name | string | IPspace name |
| uuid | string | IPspace UUID |

local_endpoint

Local endpoint for the IPsec policy.

| Name | Type | Description |
|---------|--------|----------------------|
| address | string | IPv4 or IPv6 address |
| family | string | IPv4 or IPv6 |

| Name | Type | Description |
|---------|--------|---|
| netmask | string | Input as netmask length (16) or IPv4 mask (255.255.0.0). For IPv6, the default value is 64 with a valid range of 1 to 127. Output is always netmask length. |
| port | string | Application port to be covered by the IPsec policy |

remote_endpoint

Remote endpoint for the IPsec policy.

| Name | Type | Description |
|---------|--------|---|
| address | string | IPv4 or IPv6 address |
| family | string | IPv4 or IPv6 |
| netmask | string | Input as netmask length (16) or IPv4 mask (255.255.0.0). For IPv6, the default value is 64 with a valid range of 1 to 127. Output is always netmask length. |
| port | string | Application port to be covered by the IPsec policy |

svm

SVM, applies only to SVM-scoped objects.

| Name | Type | Description |
|--------|------------------------|---|
| _links | _links | |
| name | string | The name of the SVM. This field cannot be specified in a PATCH method. |
| uuid | string | The unique identifier of the SVM. This field cannot be specified in a PATCH method. |

ipsec_policy

IPsec policy object.

| Name | Type | Description |
|-----------------------|---------------------------------|---|
| action | string | Action for the IPsec policy. |
| authentication_method | string | Authentication method for the IPsec policy. |
| certificate | certificate | Certificate for the IPsec policy. |
| enabled | boolean | Indicates whether or not the policy is enabled. |
| ipspace | ipspace | Applies to both SVM and cluster-scoped objects. Either the UUID or name may be supplied on input. |
| local_endpoint | local_endpoint | Local endpoint for the IPsec policy. |
| local_identity | string | Local Identity |
| name | string | IPsec policy name. |
| protocol | string | Lower layer protocol to be covered by the IPsec policy. |
| remote_endpoint | remote_endpoint | Remote endpoint for the IPsec policy. |
| remote_identity | string | Remote Identity |
| scope | string | Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster". |
| secret_key | string | Pre-shared key for IKE negotiation. |
| svm | svm | SVM, applies only to SVM-scoped objects. |
| uuid | string | Unique identifier of the IPsec policy. |
