# Manage keystores

## Security key-stores endpoint overview

### Overview

A keystore describes a key-manager configuration, specifically the type of key-manager and whether the configuration is currently enabled for the configured SVM.

### Examples

#### Retrieving information for all configured key managers

The following example shows how to retrieve information about all configured key managers.

```
# The API:
GET /api/security/key-stores

# The call:
curl -X GET 'https://<mgmt-ip>/api/security/key-stores?fields=*' -H
'accept: application/hal+json'

# The response:
{
  "records": [
    {
      "type": "okm",
