Manage snapshot policies and schedules

Storage snapshot-policies snapshot_policy.uuid schedules endpoint overview

Overview

In ONTAP, scheduled snapshot creation works based on the schedules associated with snapshot policies. ONTAP provides six cluster-wide schedules: "5min", "8hour", "hourly", "daily", "weekly" and "monthly". A snapshot policy is created using at least one of these schedules and up to 5 schedules can be associated with a snapshot policy. A snapshot policy can be linked to a storage object and based on the schedule in the policy, snapshots are created on the object at that interval. Each schedule in a snapshot policy has a snapshot name prefix attached to it. Every snapshot created using this policy has this prefix in its name. There is also a retention count associated with every schedule. This count indicates the maximum number of snapshots that can exist for a given schedule. Once the snapshot count reaches the retention count, on the next create operation, the oldest snapshot is deleted. A retention period can be associated with every schedule. During snapshot creation, this period is set as SnapLock expiry time on snapshot locking enabled volumes.

A schedule can be added, modified or deleted from a snapshot policy.

Snapshot policy schedule APIs

The following APIs are used to perform operations related to snapshot policy schedules:

– POST /api/storage/snapshot-policies/{snapshot_policy.uuid}/schedules/

– GET /api/storage/snapshot-policies/{snapshot_policy.uuid}/schedules/

– GET /api/storage/snapshot-policies/{snapshot_policy.uuid}/schedules/{schedule.uuid}

– PATCH /api/storage/snapshot-policies/{snapshot_policy.uuid}/schedules/{schedule.uuid}

– DELETE /api/storage/snapshot-policies/{snapshot_policy.uuid}/schedules/{schedule.uuid}

Examples

Adding schedule to a snapshot policy

The POST operation is used to create a schedule for a snapshot policy with the specified attributes.

```

# The API:
/api/storage/snapshot-policies/{snapshot_policy.uuid}/schedules/

# The call:
curl -X POST "https://<mgmt-ip>/api/storage/snapshot-policies/32a0841a-818e-11e9-b4f4-005056bbab9c/schedules" -H "accept: application/hal+json" -d '{"schedule.uuid": "7c985d80-818a-11e9-b4f4-005056bbab9c", "count": "5", "prefix": "new_hourly" }'

# The response:

Add a schedule to a snapshot policy

POST /storage/snapshot-policies/{snapshot_policy.uuid}/schedules

Introduced In: 9.8

Adds a schedule to a snapshot policy.

Required properties

- `schedule.uuid` or `schedule.name` - Schedule at which snapshots are captured on the volume.
- `count` - Number of snapshots to maintain for this schedule.

Recommended optional properties

- `prefix` - Prefix to use when creating snapshots at regular intervals.

Default property values

If not specified in POST, the following default property values are assigned:

- `prefix` - Value of `schedule.name`
