Security authentication cluster oauth2 clients endpoint overview

Overview

This API is used to retrieve and configure relevant information pertaining to the OAuth 2.0 configuration in the cluster. The POST request creates the OAuth 2.0 configuration if there is none present. Various responses are shown in the examples below.

Examples

Retrieving the OAuth 2.0 configuration in the cluster

The following output shows the OAuth 2.0 configuration in the cluster.

```
# The API:
/api/security/authentication/cluster/oauth2/clients

# The call:
curl -X GET "https://<mgmt-
ip>/api/security/authentication/cluster/oauth2/clients" -H "accept:
application/hal+json"

# The response:
{
 "records": [
{
  "name": "auth0"
}
 ],
 "num_records": 1
}
```

Creating the OAuth 2.0 configuration

The following output shows how to create the OAuth 2.0 configuration in the cluster.

```

a|The number of seconds to allow the call to execute before returning.
When doing a POST, PATCH, or DELETE operation on a single record, the
default is 0 seconds. This means that if an asynchronous operation is
started, the server immediately returns HTTP code 202 (Accepted) along
with a link to the job. If a non-zero value is specified for POST, PATCH,
