Manage Barbican KMS configurations

Manage Barbican KMS configurations

Overview

Barbican Key Management Services (KMS) is a key management service that provides a secure store for encryption keys. This feature allows ONTAP to securely protect its encryption keys using Barbican KMS. Before you can use Barbican KMS with ONTAP, you must provide ONTAP with the necessary details to allow ONTAP to communicate with the deployed Barbican application. These details include the key ID URL, Keystone authentication URL, and the application credentials ID and secret. The property `barbican_reachability` is considered an advanced property and is populated only when explicitly requested.

Examples

Creating an inactive Barbican configuration for an SVM

The example Barbican configuration is created for a specific SVM but is not enabled. Note the `return_records=true` query parameter can be used to return the newly created key-manager keystore configuration.

```
# The API:
POST /api/security/barbican-kms

# The call:
curl -X POST 'https://<mgmt-ip>/api/security/barbican-kms' -H 'accept:
application/hal+json' -H 'Content-Type: application/json' -d '{ "svm": {
"name": "barbican_svm" }, "configuration": {"name": "myConfiguration"},
"application_cred_id": "app1", "application_cred_secret": "secret1",
"key_id": "https://sample.keyid.com:9311/v1/secrets/5c610a4f-ea97-44b5-
8682-f4daeafa9647/", "keystone_url":
"https://sample.keystone.com:5000/v3/auth/tokens" }'

# The response:
{
  "job": {
    "uuid": "5a208fb0-fa58-11ef-8c9f-005056bbeee5",
    "_links": {
      "self": {
        "href": "/api/cluster/jobs/5a208fb0-fa58-11ef-8c9f-005056bbeee5"
      }
    }
  }
}
```

Listing all Barbican configurations

The following example shows how to retrieve a list of all created Barbican configurations.

```
# The API:
GET /api/security/barbican-kms

# The call:
curl -X GET 'https://<mgmt-ip>/api/security/barbican-kms'

# The response:
{
  "records": [
    {
      "configuration": {
        "name": "myConfiguration",
        "uuid": "5a134975-fa58-11ef-8c9f-005056bbbee5"
      },
      "uuid": "5a134975-fa58-11ef-8c9f-005056bbbee5",
      "_links": {
        "self": {
          "href": "/api/security/barbican-kms/5a134975-fa58-11ef-8c9f-005056bbbee5"
        }
      }
    }
  ],
  "num_records": 1,
  "_links": {
    "self": {
      "href": "/api/security/barbican-kms"
    }
  }
}
```

Retrieving a specific Barbican configuration

The following example shows how to retrieve information for a specific Barbican configuration.

```
# The API:
GET /api/security/barbican-kms/{uuid}

# The call:
curl -X GET 'https://<mgmt-ip>/api/security/barbican-kms/5a134975-fa58-11ef-8c9f-005056bbbee5?fields=*'

# The response:
{
  "configuration": {
    "name": "myConfiguration",
    "uuid": "5a134975-fa58-11ef-8c9f-005056bbbee5"
  },
  "uuid": "5a134975-fa58-11ef-8c9f-005056bbbee5",
  "scope": "svm",
  "svm": {
    "uuid": "ec8e0954-fa10-11ef-8c9f-005056bbbee5",
    "name": "barbican_svm"
  },
  "key_id": "https://sample.keyid.com:9311/v1/secrets/5c610a4f-ea97-44b5-8682-f4daeafa9647/",
  "application_cred_id": "appl",
  "keystone_url": "https://sample.keystone.com:5000/v3/auth/tokens",
  "proxy_type": "https",
  "proxy_host": "",
  "proxy_port": 0,
  "proxy_username": "",
  "verify": true,
  "verify_host": true,
  "enabled": false,
  "timeout": 10,
  "_links": {
    "self": {
      "href": "/api/security/barbican-kms/5a134975-fa58-11ef-8c9f-005056bbbee5"
    }
  }
}
```

Retrieving an advanced property for a specific Barbican configuration

The following example shows how to retrieve an advanced property for a specific Barbican configuration.

```
# The API:
GET /api/security/barbican-kms/{uuid}

# The call:
curl -X GET 'https://<mgmt-ip>/api/security/barbican-kms/f72098a2-e908-11ea-bd56-005056bb4222?fields=barbican_reachability'

# The response:
{
  "configuration": {
    "name": "myConfiguration",
    "uuid": "f72098a2-e908-11ea-bd56-005056bb4222"
  },
  "uuid": "f72098a2-e908-11ea-bd56-005056bb4222",
  "barbican_reachability": {
    "reachable": true,
    "message": "",
    "code": "0"
  },
  "_links": {
    "self": {
      "href": "/api/security/barbican-kms/f72098a2-e908-11ea-bd56-005056bb4222"
    }
  }
}
```

Updating the application credentials ID and secret for a specific Barbican configuration

The following example shows how to update the application credentials for a specific Barbican configuration.

```
# The API:
PATCH /api/security/barbican-kms/{uuid}

# The call:
curl -X PATCH 'https://<mgmt-ip>/api/security/barbican-kms/f72098a2-e908-11ea-bd56-005056bb4222/' -d '{"application_cred_id": "app345",
"application_cred_secret" : "secret"}'

# The response:
{
  "job": {
    "uuid": "921ee66a-fa5a-11ef-8c9f-005056bbeee5",
    "_links": {
      "self": {
        "href": "/api/cluster/jobs/921ee66a-fa5a-11ef-8c9f-005056bbeee5"
      }
    }
  }
}
```

Enabling a Barbican configuration

The newly created Barbican configuration is inactive by default. Use the REST API PATCH method `/api/security/key-stores/{uuid}` to enable the configuration.

Restoring keys

The following example shows how to restore keys for a specific Barbican configuration.

```
# The API:
POST /api/security/barbican-kms/{uuid}/restore

# The call:
curl -X POST 'https://<mgmt-ip>/api/security/barbican-kms/f72098a2-e908-11ea-bd56-005056bb4222/restore'

# The response:
{
  "job": {
    "uuid": "e89e7283-2c49-11f0-831c-005056bb33a5",
    "_links": {
      "self": {
        "href": "/api/cluster/jobs/e89e7283-2c49-11f0-831c-005056bb33a5"
      }
    }
  }
}
```

Rekey the internal key

The following example shows how to rekey the internal key based on a specific Barbican configuration.

```
# The API:
POST /api/security/barbican-kms/{uuid}/rekey-internal

# The call:
curl -X POST 'https://<mgmt-ip>/api/security/barbican-kms/f72098a2-e908-11ea-bd56-005056bb4222/rekey-internal'

# The response:
{
  "job": {
    "uuid": "921ee66a-fa5a-11ef-8c9f-005056bbeee5",
    "_links": {
      "self": {
        "href": "/api/cluster/jobs/921ee66a-fa5a-11ef-8c9f-005056bbeee5"
      }
    }
  }
}
```

Retrieve Barbican KMS configurations for all SVMs

GET /security/barbican-kms

Introduced In: 9.17

Retrieves Barbican KMS configurations for all SVMs.

Related ONTAP commands

- `security key-manager external barbican show`
- `security key-manager external barbican check`

Parameters

Name	Type	In	Required	Description
keystone_url	string	query	False	Filter by keystone_url
uuid	string	query	False	Filter by uuid
timeout	integer	query	False	Filter by timeout
proxy_type	string	query	False	Filter by proxy_type
enabled	boolean	query	False	Filter by enabled
proxy_port	integer	query	False	Filter by proxy_port
barbican_reachability.message	string	query	False	Filter by barbican_reachability.message
barbican_reachability.code	string	query	False	Filter by barbican_reachability.code
barbican_reachability.reachable	boolean	query	False	Filter by barbican_reachability.reachable
configuration.uuid	string	query	False	Filter by configuration.uuid
configuration.name	string	query	False	Filter by configuration.name

Name	Type	In	Required	Description
state.cluster_state	boolean	query	False	Filter by state.cluster_state
state.message	string	query	False	Filter by state.message
state.code	string	query	False	Filter by state.code
key_id	string	query	False	Filter by key_id
proxy_host	string	query	False	Filter by proxy_host
scope	string	query	False	Filter by scope
verify	boolean	query	False	Filter by verify
proxy_username	string	query	False	Filter by proxy_username
application_cred_id	string	query	False	Filter by application_cred_id
verify_host	boolean	query	False	Filter by verify_host
svm.name	string	query	False	Filter by svm.name
svm.uuid	string	query	False	Filter by svm.uuid
fields	array[string]	query	False	Specify the fields to return.
max_records	integer	query	False	Limit the number of records returned.

Name	Type	In	Required	Description
return_timeout	integer	query	False	The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached. • Default value: 15 • Max value: 120 • Min value: 0
return_records	boolean	query	False	The default is true for GET calls. When set to false, only the number of records is returned. • Default value: 1
order_by	array[string]	query	False	Order results by specified fields and optional [asc

Response

Status: 200, Ok

barbican_reachability

Indicates whether the Barbican KMS is reachable from all nodes in the cluster. This is an advanced property; there is an added computational cost to retrieving its value. The property is not populated for either a collection GET request or an instance GET request unless it is explicitly requested using the field's query parameter or GET for all advanced properties is enabled.

Name	Type	Description
code	string	Code corresponding to the error message. Returns 0 if Barbican KMS is reachable from all nodes in the cluster.
message	string	Set to the appropriate error message when 'reachable' is false.
reachable	boolean	Set to true if the Barbican KMS is reachable from all nodes of the cluster.

configuration

Security keystore object reference.

Name	Type	Description
_links	_links	

Name	Type	Description
name	string	Name of the configuration.
uuid	string	Keystore UUID.

state

Indicates whether or not the SVM key encryption key (KEK) is available cluster wide. This is an advanced property; there is an added computational cost to retrieving its value. The property is not populated for either a collection GET or an instance GET unless it is explicitly requested using the `fields` query parameter or GET for all advanced properties is enabled.

Name	Type	Description
cluster_state	boolean	Set to true when an SVM-KEK is present on all nodes of the cluster.
code	string	Code corresponding to the status message. Returns a 0 if the SVM-KEK is available on all nodes in the cluster.
message	string	Error message returned when there's no SVM-KEK availability on the cluster.

svm

SVM, applies only to SVM-scoped objects.

Name	Type	Description
_links	_links	
name	string	The name of the SVM. This field cannot be specified in a PATCH method.
uuid	string	The unique identifier of the SVM. This field cannot be specified in a PATCH method.

barbican

Name	Type	Description
_links	_links	

Name	Type	Description
application_cred_id	string	Keystone application credentials ID required to access the specified Barbican KMS.
barbican_reachability	barbican_reachability	Indicates whether the Barbican KMS is reachable from all nodes in the cluster. This is an advanced property; there is an added computational cost to retrieving its value. The property is not populated for either a collection GET request or an instance GET request unless it is explicitly requested using the field's query parameter or GET for all advanced properties is enabled.
configuration	configuration	Security keystore object reference.
enabled	boolean	Indicates whether the configuration is enabled.
key_id	string	Key Identifier URL of the Barbican KMS key encryption key. Must be an HTTPS URL.
keystone_url	string	Keystone URL for the access token. Must be an HTTPS URL.
proxy_host	string	Proxy host name.
proxy_port	integer	Proxy port number.
proxy_type	string	Type of proxy.
proxy_username	string	Proxy username.
scope	string	Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster".

Name	Type	Description
state	state	Indicates whether or not the SVM key encryption key (KEK) is available cluster wide. This is an advanced property; there is an added computational cost to retrieving its value. The property is not populated for either a collection GET or an instance GET unless it is explicitly requested using the <code>fields</code> query parameter or GET for all advanced properties is enabled.
svm	svm	SVM, applies only to SVM-scoped objects.
timeout	integer	Connection timeout in seconds.
uuid	string	A unique identifier of the Barbican KMS.
verify	boolean	Verify the identity of the Barbican KMS.
verify_host	boolean	Verify the identity of the Barbican KMS host name.

error_arguments

Name	Type	Description
code	string	Argument code
message	string	Message argument

code	string	Error code
message	string	Error message

Name	Type	Description
target	string	The target parameter that caused the error.

Create a Barbican KMS configuration for an SVM

POST /security/barbican-kms

Introduced In: 9.17

Creates a Barbican KMS configuration for the specified SVM.

Required properties

- `configuration.name` - Name for the new Barbican configuration.
- `svm.uuid` or `svm.name` - Existing SVM in which to create a Barbican KMS.
- `key_id` - Barbican key URL.
- `keystone_url` - Keystone authentication URL.
- `application_cred_id` - Keystone authentication application ID with access to the Barbican KMS.
- `application_cred_secret` - Application credentials secret to authenticate the application credentials ID with Keystone.

Optional properties

- `proxy_type` - Type of proxy (http/https) if proxy configuration is used.
- `proxy_host` - Proxy hostname if proxy configuration is used.
- `proxy_port` - Proxy port number if proxy configuration is used.
- `proxy_username` - Proxy username if proxy configuration is used.
- `proxy_password` - Proxy password if proxy configuration is used.
- `verify` - Verify the identity of the Barbican KMS?
- `verify_host` - Verify the identity of the Barbican KMS host name?
- `timeout` - Connection timeout in seconds.

Related ONTAP commands

- `security key-manager external barbican create-config`

Parameters

Name	Type	In	Required	Description
return_timeout	integer	query	False	The number of seconds to allow the call to execute before returning. When doing a POST, PATCH, or DELETE operation on a single record, the default is 0 seconds. This means that if an asynchronous operation is started, the server immediately returns HTTP code 202 (Accepted) along with a link to the job. If a non-zero value is specified for POST, PATCH, or DELETE operations, ONTAP waits that length of time to see if the job completes so it can return something other than 202. • Default value: 0 • Max value: 120 • Min value: 0
return_records	boolean	query	False	The default is false. If set to true, the records are returned. • Default value:

Request Body

Name	Type	Description
_links	_links	
application_cred_id	string	Keystone application credentials ID required to access the specified Barbican KMS.

Name	Type	Description
application_cred_secret	string	Keystone application credentials secret required to access the specified Barbican KMS. It is not audited.
barbican_reachability	barbican_reachability	Indicates whether the Barbican KMS is reachable from all nodes in the cluster. This is an advanced property; there is an added computational cost to retrieving its value. The property is not populated for either a collection GET request or an instance GET request unless it is explicitly requested using the field's query parameter or GET for all advanced properties is enabled.
configuration	configuration	Security keystore object reference.
enabled	boolean	Indicates whether the configuration is enabled.
key_id	string	Key Identifier URL of the Barbican KMS key encryption key. Must be an HTTPS URL.
keystone_url	string	Keystone URL for the access token. Must be an HTTPS URL.
proxy_host	string	Proxy host name.
proxy_password	string	Proxy password. Password is not audited.
proxy_port	integer	Proxy port number.
proxy_type	string	Type of proxy.
proxy_username	string	Proxy username.
scope	string	Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster".

Name	Type	Description
state	state	Indicates whether or not the SVM key encryption key (KEK) is available cluster wide. This is an advanced property; there is an added computational cost to retrieving its value. The property is not populated for either a collection GET or an instance GET unless it is explicitly requested using the <code>fields</code> query parameter or GET for all advanced properties is enabled.
svm	svm	SVM, applies only to SVM-scoped objects.
timeout	integer	Connection timeout in seconds.
uuid	string	A unique identifier of the Barbican KMS.
verify	boolean	Verify the identity of the Barbican KMS.
verify_host	boolean	Verify the identity of the Barbican KMS host name.

href

Name	Type	Description
href	string	

_links

barbican_reachability

Indicates whether the Barbican KMS is reachable from all nodes in the cluster. This is an advanced property; there is an added computational cost to retrieving its value. The property is not populated for either a collection GET request or an instance GET request unless it is explicitly requested using the field's query parameter or GET for all advanced properties is enabled.

Name	Type	Description
code	string	Code corresponding to the error message. Returns 0 if Barbican KMS is reachable from all nodes in the cluster.
message	string	Set to the appropriate error message when 'reachable' is false.
reachable	boolean	Set to true if the Barbican KMS is reachable from all nodes of the cluster.

configuration

Security keystore object reference.

Name	Type	Description
name	string	Name of the configuration.
uuid	string	Keystore UUID.

state

Indicates whether or not the SVM key encryption key (KEK) is available cluster wide. This is an advanced property; there is an added computational cost to retrieving its value. The property is not populated for either a collection GET or an instance GET unless it is explicitly requested using the `fields` query parameter or GET for all advanced properties is enabled.

Name	Type	Description
cluster_state	boolean	Set to true when an SVM-KEK is present on all nodes of the cluster.
code	string	Code corresponding to the status message. Returns a 0 if the SVM-KEK is available on all nodes in the cluster.
message	string	Error message returned when there's no SVM-KEK availability on the cluster.

svm

SVM, applies only to SVM-scoped objects.

Name	Type	Description
name	string	The name of the SVM. This field cannot be specified in a PATCH method.
uuid	string	The unique identifier of the SVM. This field cannot be specified in a PATCH method.

barbican

Name	Type	Description
_links	_links	
application_cred_id	string	Keystone application credentials ID required to access the specified Barbican KMS.
application_cred_secret	string	Keystone application credentials secret required to access the specified Barbican KMS. It is not audited.

Name	Type	Description
barbican_reachability	barbican_reachability	Indicates whether the Barbican KMS is reachable from all nodes in the cluster. This is an advanced property; there is an added computational cost to retrieving its value. The property is not populated for either a collection GET request or an instance GET request unless it is explicitly requested using the field's query parameter or GET for all advanced properties is enabled.
configuration	configuration	Security keystore object reference.
enabled	boolean	Indicates whether the configuration is enabled.
key_id	string	Key Identifier URL of the Barbican KMS key encryption key. Must be an HTTPS URL.
keystone_url	string	Keystone URL for the access token. Must be an HTTPS URL.
proxy_host	string	Proxy host name.
proxy_password	string	Proxy password. Password is not audited.
proxy_port	integer	Proxy port number.
proxy_type	string	Type of proxy.
proxy_username	string	Proxy username.
scope	string	Set to "svm" for interfaces owned by an SVM. Otherwise, set to "cluster".

Name	Type	Description
state	state	Indicates whether or not the SVM key encryption key (KEK) is available cluster wide. This is an advanced property; there is an added computational cost to retrieving its value. The property is not populated for either a collection GET or an instance GET unless it is explicitly requested using the <code>fields</code> query parameter or GET for all advanced properties is enabled.
svm	svm	SVM, applies only to SVM-scoped objects.
timeout	integer	Connection timeout in seconds.
uuid	string	A unique identifier of the Barbican KMS.
verify	boolean	Verify the identity of the Barbican KMS.
verify_host	boolean	Verify the identity of the Barbican KMS host name.

job_link

Name	Type	Description
uuid	string	The UUID of the asynchronous job that is triggered by a POST, PATCH, or DELETE operation.

error_arguments

Name	Type	Description
code	string	Argument code
message	string	Message argument

returned_error

Name	Type	Description
arguments	array[error_arguments]	Message arguments
code	string	Error code
message	string	Error message
target	string	The target parameter that caused the error.

Retrieve the Barbican KMS configuration for an SVM

GET /security/barbican-kms/{uuid}

Introduced In: 9.17

Retrieves the Barbican KMS configuration for the SVM specified by the UUID.

Related ONTAP commands

- `security key-manager external barbican show`
- `security key-manager external barbican check`

Parameters

Name	Type	In	Required	Description
uuid	string	path	True	Barbican KMS UUID
fields	array[string]	query	False	Specify the fields to return.

Response

Status: 200, Ok

Name	Type	Description

Update the Barbican KMS configuration

PATCH /security/barbican-kms/{uuid}

Introduced In: 9.17

Updates the Barbican KMS configuration.

Optional properties

- `application_cred_id` - New credentials used to verify the application's identity to the Barbican KMS. You must provide both `application_cred_id` and `application_cred_secret` to update the credentials.
- `application_cred_secret` - New credentials secret used to verify the application's identity to the Barbican KMS. You must provide both `application_cred_id` and `application_cred_secret` to update the credentials.
- `proxy_type` - Type of proxy (http/https) if proxy configuration is used.
- `proxy_host` - Proxy hostname if proxy configuration is used.
- `proxy_port` - Proxy port number if proxy configuration is used.
- `proxy_username` - Proxy username if proxy configuration is used.
- `proxy_password` - Proxy password if proxy configuration is used.
- `verify` - Verify the identity of the Barbican KMS?
- `verify_host` - Verify the identity of the Barbican KMS host name?
- `timeout` - Connection timeout in seconds.

Related ONTAP commands

- `security key-manager external barbican update-credentials`
- `security key-manager external barbican update-config`

Parameters

Name	Type	In	Required	Description
uuid	string	path	True	Barbican KMS UUID

Name	Type	In	Required	Description
return_timeout	integer	query	False	The number of seconds to allow the call to execute before returning. When doing a POST, PATCH, or DELETE operation on a single record, the default is 0 seconds. This means that if an asynchronous operation is started, the server immediately returns HTTP code 202 (Accepted) along with a link to the job. If a non-zero value is specified for POST, PATCH, or DELETE operations, ONTAP waits that length of time to see if the job completes so it can return something other than 202. • Default value: 0 • Max value: 120 • Min value: 0

Request Body

Name	Type	Description
_links	_links	
application_cred_id	string	Keystone application credentials ID required to access the specified Barbican KMS.

ONTAP Error Response Codes

Error Code	Description
65536205	Internal error. Failed to generate SVM key in the kernel.
65536882	Internal error. UUID is missing.
65536883	Internal error. Volume encryption key is missing.
65536884	Internal error. Volume encryption key is invalid.

Error Code	Description
65536889	Internal error. Volume has invalid encryption blob.
65536973	Internal error. Volume DSID is missing.
65537533	Internal error. Failed to unwrap SVM key encryption key.
65537547	One or more volume encryption keys (VEKs) for this data SVM's encrypted volumes are stored in the key manager configured for the admin SVM. Use the REST API POST method <code>"/api/security/key-managers/{source.svm.uuid}/migrate"</code> to migrate these keys from the admin SVM's key manager to this data SVM's key manager before running the rekey operation.
65537556	ONTAP is unable to encrypt or decrypt because the configured external key manager is in a blocked state. Possible reasons for a blocked state include the top-level external key protection key is not found, disabled or has insufficient privileges. Resolve the external key manager key issues at the key manager's portal before running the rekey operation.
65537565	Internal error. Failed to update the VDEK blob.
65537610	Rekey cannot be performed while the enabled keystore configuration is being switched. If a previous attempt to switch the keystore configuration failed, or was interrupted, the system will continue to prevent rekeying. Use the REST API PATCH method <code>"/api/security/key-stores/{uuid}"</code> to re-run and complete the operation.
65539200	The key custodian not provided with an external key value store.
65539201	Failed to encrypt.
65539202	Failed to decrypt.
65539416	Internal error. Failed to parse the key value store response.
65539436	Rekey cannot be performed while the enabled keystore configuration is being initialized. Wait until the keystore is in the active state, and rerun the rekey operation.
65539437	Rekey cannot be performed while the enabled keystore configuration is being disabled.
65539817	The Barbican Key Management Service is not configured.
65539834	New Key ID not found.
65539836	No Key Management Service configured.

Error Code	Description
65539844	Failed to import the SVM-KEK.
196608088	Internal error. Failed to get encryption operation status.
196608352	Internal error. The encryption blob was not found in the RDB table.

Also see the table of common errors in the [Response body](#) overview section of this documentation.

IN NO EVENT SHALL NETAPP BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

NetApp reserves the right to change any products described herein at any time, and without notice. NetApp assumes no responsibility or liability arising from the use of products described herein, except as expressly agreed to in writing by NetApp. The use or purchase of this product does not convey a license under any patent rights, trademark rights, or any other intellectual property rights of NetApp.

The product described in this manual may be protected by one or more U.S. patents, foreign patents, or pending applications.

LIMITED RIGHTS LEGEND: Use, duplication, or disclosure by the government is subject to restrictions as set forth in subparagraph (b)(3) of the Rights in Technical Data -Noncommercial Items at DFARS 252.227-7013 (FEB 2014) and FAR 52.227-19 (DEC 2007).

Data contained herein pertains to a commercial product and/or commercial service (as defined in FAR 2.101) and is proprietary to NetApp, Inc. All NetApp technical data and computer software provided under this Agreement is commercial in nature and developed solely at private expense. The U.S. Government has a non-exclusive, non-transferrable, nonsublicensable, worldwide, limited irrevocable license to use the Data only in connection with and in support of the U.S. Government contract under which the Data was delivered. Except as provided herein, the Data may not be used, disclosed, reproduced, modified, performed, or displayed without the prior written approval of NetApp, Inc. United States Government license rights for the Department of Defense are limited to those rights identified in DFARS clause 252.227-7015(b) (FEB 2014).
