Manage cluster mediators

Manage cluster mediators

Overview

You can use this API to add, modify or remove a mediator in a MetroCluster IP configuration or a SnapMirror active sync configuration. You can also use this API to get the status and details of the existing mediator. The GET operation returns the status of the mediator along with the mediator details. The DELETE operation removes the mediator. The POST operation adds the mediator. The PATCH operation modifies the local and remote proxy options. SnapMirror active sync supports two types of mediators:

1. **ONTAP Mediator:** This is the traditional mediator used in SnapMirror active sync, and is hosted on-premises. It requires deployment at a third, neutral site.
2. **ONTAP cloud mediator:** This mediator is hosted in BlueXP SaaS and is primarily designed for SnapMirror active sync. It eliminates the need for a third site and provides enhanced scalability and availability.

Adding a mediator

A mediator can be added by issuing a POST request on `/cluster/mediators`. Parameters are provided in the body of the POST request. There are no optional parameters for adding a mediator to a MetroCluster IP configuration.

Required configuration fields (MetroCluster)

These fields are always required for any POST `/cluster/mediators` request.

- `ip_address` - Specifies the IP address of the mediator.
- `user` - Specifies a user name credential.
- `password` - Specifies a password credential.

Required configuration fields (SnapMirror active sync: ONTAP Mediator, ONTAP cloud mediator)

These fields are required for any POST `/cluster/mediators` request.

- `type` - (defaults to "on-prem" if omitted) Specifies the type of mediator. For the ONTAP Mediator, the value of type has to be "on-prem". For the ONTAP cloud mediator, the value of type has to be "cloud".
- `peer_cluster.name` - Specifies the name of the peer cluster.
- `ip_address` - (only applicable to the ONTAP Mediator) Specifies the IP address of the mediator.
- `user` - (only applicable to the ONTAP Mediator) Specifies the user name credential.
- `password` - (only applicable to the ONTAP Mediator) Specifies a password credential.
- `ca_certificate` - (optional if the certificate is already installed, only applicable to the ONTAP Mediator) Specifies the CA certificate for the ONTAP Mediator.
- `bluexp_org_id` - (only applicable to the ONTAP cloud mediator) Specifies the BlueXP organization ID.
- `service_account_client_id` - (only applicable to the ONTAP cloud mediator) Specifies the client ID of the service account.

- `service_account_client_secret` - (only applicable to the ONTAP cloud mediator) Specifies the client secret of the service account.
- `bluexp_account_token` - (only applicable to the ONTAP cloud mediator) Specifies the BlueXP service account token. This field is mutually exclusive with the `service_account_client_id` and `service_account_client_secret` pair, meaning either the token or the client-id and client-secret pair is allowed.
- `use_http_proxy_local` - (optional, defaults to false if omitted, only applicable for ONTAP cloud mediator) Specifies if a HTTP proxy should be used on the ONTAP cluster.
- `use_http_proxy_remote` - (optional, defaults to false if omitted, only applicable for ONTAP cloud mediator) Specifies if a HTTP proxy should be used on the peer ONTAP cluster.
- `strict_cert_validation` - (optional, defaults to false if omitted, only applicable for ONTAP cloud mediator) Specifies if strict validation of certificates is performed while making REST API calls to the ONTAP Cloud Mediator.

Polling the setup job

After a successful POST `/cluster/mediators` is issued, an HTTP status code of 202 (Accepted) is returned along with a job UUID and a link in the body of the response. The setup job continues asynchronously and can be monitored by using the job UUID and the `/cluster/jobs` API. The "message" field in the response of the GET `/cluster/jobs/{uuid}` request shows the current step in the job, and the "state" field shows the overall state of the job.

Deleting a mediator

A mediator can be deleted by issuing a DELETE to `/cluster/mediators/{uuid}`. Parameters are provided in the body of the DELETE request. There are no optional parameters for deleting a mediator in a MetroCluster IP configuration.

Required configuration fields (MetroCluster)

These fields are always required for any DELETE `/cluster/mediators/{uuid}` request.

- `user` - Specifies a user name credential.
- `password` - Specifies a password credential.

Required configuration fields (SnapMirror active sync: ONTAP Mediator, ONTAP cloud mediator)

No fields are required in the body of the DELETE `/cluster/mediators/{uuid}` request for a mediator in SnapMirror active sync configuration.

Polling the delete job

After a successful DELETE `/cluster/mediators/{uuid}` is issued, an HTTP status code of 202 (Accepted) is returned along with a job UUID and a link in the body of the response. The delete job continues asynchronously and can be monitored by using the job UUID and the `/cluster/jobs` API. The "message" field in the response of the GET `/cluster/jobs/{uuid}` request shows the current step in the job, and the "state" field shows the overall state of the job.

Modify a mediator

An ONTAP cloud mediator can be modified by issuing a PATCH to `/cluster/mediators/{uuid}`. Parameters are provided in the body of the PATCH request. Currently there are only 2 parameters which can be modified.

Fields which can be modified

These fields can be modified by any PATCH `/cluster/mediators/{uuid}` request.

- `use-http-proxy-local` - Specifies if the local cluster should use http-proxy server while making REST API calls to mediator.
- `use-http-proxy-remote` - Specifies if the remote cluster should use http-proxy while making REST API calls to mediator.

Polling the modify job

After a successful PATCH `/cluster/mediators/{uuid}` is issued, an HTTP status code of 202 (Accepted) is returned along with a link in the body of the response. The modify response can be monitored by using the `/cluster/jobs` API. The "message" field in the response of the GET `/cluster/jobs/{uuid}` request shows the current step in the job, and the "state" field shows the overall state of the job.

Examples

Setting up a mediator for a four-node MetroCluster and a SnapMirror active sync configuration

This example shows the POST body when setting up a mediator for a four-node MetroCluster IP configuration and a SnapMirror active sync configuration. For MetroCluster, the only prerequisite is that MetroCluster IP is configured.

```
# API
/api/cluster/mediators
```

POST body included from file (MetroCluster)

```
mediator_post_body.txt:
{
  "ip_address": "1.1.1.1",
  "user": "username",
  "password": "password"
}
curl -X POST https://<mgmt-ip>/api/cluster/mediators -d
"@mediator_post_body.txt"
```

POST body included from file (SnapMirror active sync: ONTAP Mediator)

```
mediator_post_body.txt:
{
"peer_cluster.name": "C2_sti230-vsim-sr092w_cluster",
"ip_address": "172.18.48.61",
"user": "username",
"password": "password"
}
curl -X POST https://<mgmt-ip>/api/cluster/mediators -d
"@mediator_post_body.txt"
```

POST body included from file (SnapMirror active sync: ONTAP cloud mediator)

```
mediator_post_body.txt:
{
"peer_cluster.name": "C2_sti230-vsim-sr092w_cluster",
"type": "cloud",
"bluexp_org_id": "your-bluexp-org-id",
"service_account_client_id": "your-account-client-id",
"service_account_client_secret": "your-account-client-secret",
"use_http_proxy_local": "true",
"use_http_proxy_remote": "true",
"strict_cert_validation": "true"
}
curl -X POST https://<mgmt-ip>/api/cluster/mediators -d
"@mediator_post_body.txt"
```

Inline POST body (MetroCluster)

```
curl -X POST https://<mgmt-ip>/api/cluster/mediators -H "Content-Type:
application/hal+json" -d '{"ip_address": "1.1.1.1", "user": "username",
"password": "password"}'
```

Inline POST body (SnapMirror active sync: ONTAP Mediator)

```
curl -X POST https://<mgmt-ip>/api/cluster/mediators -H "Content-Type:
application/hal+json" -d '{"peer_cluster.name": "C2_sti230-vsim-
sr092w_cluster", "ip_address": "172.18.48.61", "user": "username",
"password": "password"}'
```

Inline POST body (SnapMirror active sync: ONTAP cloud mediator)

```
curl -X POST https://<mgmt-ip>/api/cluster/mediators -H "Content-Type: application/hal+json" -d '{"peer_cluster.name": "C2_sti230-vsim-sr092w_cluster", "type": "cloud", "bluexp_org_id": "your-bluexp-org-id", "service_account_client_id": "your-account-client-id", "service_account_client_secret": "your-account-client-secret", "use_http_proxy_local": "true", "use_http_proxy_remote": "true", "strict_cert_validation": "true"}'
```

POST Response

```
HTTP/1.1 202 Accepted
Date: Tue, 22 Sep 2020 07:40:59 GMT
Server: libzapid-httpd
X-Content-Type-Options: nosniff
Cache-Control: no-cache,no-store,must-revalidate
Location: /api/cluster/metrocluster
Content-Length: 189
Content-Type: application/hal+json
{
  "job": {
    "uuid": "f567b48b-fca6-11ea-acaf-005056bb47c1",
    "_links": {
      "self": {
        "href": "/api/cluster/jobs/f567b48b-fca6-11ea-acaf-005056bb47c1"
      }
    }
  }
}
```

Monitoring the job progress

Use the link provided in the response to the POST request to fetch information for the mediator setup job.

Request

```
curl -X GET https://<mgmt-ip>/api/cluster/jobs/f567b48b-fca6-11ea-acaf-005056bb47c1
```

Job status response

```
HTTP/1.1 202 Accepted
Date: Tue, 22 Sep 2020 07:41:29 GMT
Server: libzapid-httpd
X-Content-Type-Options: nosniff
Cache-Control: no-cache,no-store,must-revalidate
Location: /api/cluster/metrocluster
Content-Length: 189
Content-Type: application/hal+json
{
  "uuid": "f567b48b-fca6-11ea-acaf-005056bb47c1",

Retrieve ONTAP Mediators configured in the cluster

GET /cluster/mediators

Introduced In: 9.8

"Retrieves a Mediator configured in the cluster."

Related ONTAP commands

- `storage iscsi-initiator show`

Parameters

Name	Type	In	Required	Description
peer_mediator_connectivity	string	query	False	Filter by peer_mediator_connectivity • Introduced in: 9.10

Name	Type	In	Required	Description
use_http_proxy_local	boolean	query	False	Filter by use_http_proxy_local • Introduced in: 9.17
type	string	query	False	Filter by type • Introduced in: 9.17
port	integer	query	False	Filter by port
uuid	string	query	False	Filter by uuid
strict_cert_validation	boolean	query	False	Filter by strict_cert_validation • Introduced in: 9.17
peer_cluster.name	string	query	False	Filter by peer_cluster.name
peer_cluster.uuid	string	query	False	Filter by peer_cluster.uuid
ip_address	string	query	False	Filter by ip_address
local_mediator_connectivity	string	query	False	Filter by local_mediator_connectivity • Introduced in: 9.17
reachable	boolean	query	False	Filter by reachable
fields	array[string]	query	False	Specify the fields to return.
max_records	integer	query	False	Limit the number of records returned.

Name	Type	In	Required	Description
return_records	boolean	query	False	The default is true for GET calls. When set to false, only the number of records is returned. • Default value: 1
return_timeout	integer	query	False	The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached. • Default value: 15 • Max value: 120 • Min value: 0
order_by	array[string]	query	False	Order results by specified fields and optional [asc

Response

Status: 200, Ok

Name	Type	Description
_links	_links	
num_records	integer	Number of records
records	array[records]	

Example response

```

Mediator information

Name	Type	Description
dr_group	dr_group	DR group reference.
ip_address	string	The IP address of the mediator.

Name	Type	Description
local_mediator_connectivity	string	Indicates the mediator connectivity status of the local cluster. Possible values are connected, unreachable, unusable and down-high-latency. This field is only applicable to the mediators in SnapMirror active sync configuration.
peer_cluster	peer_cluster	The peer cluster that the mediator service is used for.
peer_mediator_connectivity	string	Indicates the mediator connectivity status of the peer cluster. Possible values are connected, unreachable, unknown and down-high-latency.
port	integer	The REST server's port number on the mediator.
reachable	boolean	Indicates the connectivity status of the mediator.
strict_cert_validation	boolean	Indicates if strict validation of certificates is performed while making REST API calls to the mediator. This field is only applicable to the ONTAP Cloud Mediator. • Default value: • example: true • Introduced in: 9.17 • x-nullable: true
type	string	Mediator type. This field is only applicable to the mediators in SnapMirror active sync configuration.

Name	Type	Description
use_http_proxy_local	boolean	Indicates if the local cluster should use an http-proxy server while making REST API calls to the mediator. This field is only applicable to the ONTAP cloud mediator. • Default value: • example: true • Introduced in: 9.17 • x-nullable: true
uuid	string	The unique identifier for the mediator service.

code	string	Argument code
message	string	Message argument

returned_error

Name	Type	Description
arguments	array[error_arguments]	Message arguments
code	string	Error code
message	string	Error message
target	string	The target parameter that caused the error.

Create and connect an ONTAP Mediator

POST /cluster/mediators

Introduced In: 9.8

Creates and connect a mediator.

Parameters

Name	Type	In	Required	Description
return_timeout	integer	query	False	The number of seconds to allow the call to execute before returning. When doing a POST, PATCH, or DELETE operation on a single record, the default is 0 seconds. This means that if an asynchronous operation is started, the server immediately returns HTTP code 202 (Accepted) along with a link to the job. If a non-zero value is specified for POST, PATCH, or DELETE operations, ONTAP waits that length of time to see if the job completes so it can return something other than 202. • Default value: 0 • Max value: 120 • Min value: 0
return_records	boolean	query	False	The default is false. If set to true, the records are returned. • Default value:

Request Body

Name	Type	Description
bluexp_account_token	string	BlueXP account token. This field is only applicable to the ONTAP cloud mediator. • x-ntap-createOnly: true • Introduced in: 9.17 • x-nullable: true
bluexp_org_id	string	BlueXP organization ID. This field is only applicable to the ONTAP cloud mediator. • x-ntap-createOnly: true • Introduced in: 9.17 • x-nullable: true
ca_certificate	string	CA certificate for ONTAP Mediator. This is optional if the certificate is already installed. • x-ntap-createOnly: true • Introduced in: 9.8 • x-nullable: true
dr_group	dr_group	DR group reference.
ip_address	string	The IP address of the mediator.
local_mediator_connectivity	string	Indicates the mediator connectivity status of the local cluster. Possible values are connected, unreachable, unusable and down-high-latency. This field is only applicable to the mediators in SnapMirror active sync configuration.
password	string	The password used to connect to the REST server on the mediator.
peer_cluster	peer_cluster	The peer cluster that the mediator service is used for.

Name	Type	Description
peer_mediator_connectivity	string	Indicates the mediator connectivity status of the peer cluster. Possible values are connected, unreachable, unknown and down-high-latency.
port	integer	The REST server's port number on the mediator.
reachable	boolean	Indicates the connectivity status of the mediator.
service_account_client_id	string	Client ID of the BlueXP service account. This field is only applicable to the ONTAP cloud mediator. • x-ntap-createOnly: true • Introduced in: 9.17 • x-nullable: true
service_account_client_secret	string	Client secret token of the BlueXP service account. This field is only applicable to the ONTAP cloud mediator. • x-ntap-createOnly: true • Introduced in: 9.17 • x-nullable: true
strict_cert_validation	boolean	Indicates if strict validation of certificates is performed while making REST API calls to the mediator. This field is only applicable to the ONTAP Cloud Mediator. • Default value: 1 • example: true • Introduced in: 9.17 • x-nullable: true
type	string	Mediator type. This field is only applicable to the mediators in SnapMirror active sync configuration.

Name	Type	Description
use_http_proxy_local	boolean	Indicates if the local cluster should use an http-proxy server while making REST API calls to the mediator. This field is only applicable to the ONTAP cloud mediator. • Default value: 1 • example: true • Introduced in: 9.17 • x-nullable: true
use_http_proxy_remote	boolean	Indicates if the remote cluster should use an http-proxy server while making REST API calls to the mediator. This field is only applicable to the ONTAP cloud mediator. • Default value: 1 • example: true • Introduced in: 9.17 • writeOnly: 1 • x-nullable: true
user	string	The username used to connect to the REST server on the mediator.
uuid	string	The unique identifier for the mediator service.

Error

Status: Default

ONTAP Error Response codes

Error code	Description
13369377	Mediator field "mediator.id" does not exist.
13369412	Modification of the mediator configuration succeeded on the peer cluster but failed on the local cluster. Reason : {Reason of failure}. Wait a few minutes, then try the operation again.
13369421	Failed to modify mediator configuration on the cluster. Reason : {Reason of failure}. Wait a few minutes, then try the operation again.

Definitions

See Definitions

dr_group

DR group reference.

Name	Type	Description
id	integer	DR Group ID

href

Name	Type	Description
href	string	

_links

peer_cluster

The peer cluster that the mediator service is used for.

Name	Type	Description
name	string	
uuid	string	

mediator

Mediator information

Name	Type	Description
dr_group	dr_group	DR group reference.
local_mediator_connectivity	string	Indicates the mediator connectivity status of the local cluster. Possible values are connected, unreachable, unusable and down-high-latency. This field is only applicable to the mediators in SnapMirror active sync configuration.
peer_mediator_connectivity	string	Indicates the mediator connectivity status of the peer cluster. Possible values are connected, unreachable, unknown and down-high-latency.

Name	Type	Description
reachable	boolean	Indicates the connectivity status of the mediator.
strict_cert_validation	boolean	Indicates if strict validation of certificates is performed while making REST API calls to the mediator. This field is only applicable to the ONTAP Cloud Mediator. • Default value: 1 • example: true • Introduced in: 9.17 • x-nullable: true
use_http_proxy_local	boolean	Indicates if the local cluster should use an http-proxy server while making REST API calls to the mediator. This field is only applicable to the ONTAP cloud mediator. • Default value: 1 • example: true • Introduced in: 9.17 • x-nullable: true
use_http_proxy_remote	boolean	Indicates if the remote cluster should use an http-proxy server while making REST API calls to the mediator. This field is only applicable to the ONTAP cloud mediator. • Default value: 1 • example: true • Introduced in: 9.17 • writeOnly: 1 • x-nullable: true
uuid	string	The unique identifier for the mediator service.

job_link

Name	Type	Description
uuid	string	The UUID of the asynchronous job that is triggered by a POST, PATCH, or DELETE operation.

error_arguments

Name	Type	Description
code	string	Argument code
message	string	Message argument

returned_error

Name	Type	Description
arguments	array[error_arguments]	Message arguments
code	string	Error code
message	string	Error message
target	string	The target parameter that caused the error.

Retrieve historical performance metrics for the cluster

GET `/cluster/metrics`

Introduced In: 9.6

Retrieves historical performance metrics for the cluster.

Parameters

Name	Type	In	Required	Description
latency.other	integer	query	False	Filter by latency.other
latency.total	integer	query	False	Filter by latency.total
latency.write	integer	query	False	Filter by latency.write

Name	Type	In	Required	Description
latency.read	integer	query	False	Filter by latency.read
iops.other	integer	query	False	Filter by iops.other
iops.total	integer	query	False	Filter by iops.total
iops.write	integer	query	False	Filter by iops.write
iops.read	integer	query	False	Filter by iops.read
throughput.other	integer	query	False	Filter by throughput.other
throughput.total	integer	query	False	Filter by throughput.total
throughput.write	integer	query	False	Filter by throughput.write
throughput.read	integer	query	False	Filter by throughput.read
timestamp	string	query	False	Filter by timestamp
status	string	query	False	Filter by status
duration	string	query	False	Filter by duration

Name	Type	In	Required	Description
interval	string	query	False	The time range for the data. Examples can be 1h, 1d, 1m, 1w, or 1y. The period for each time range is specified as follows: • 1h: Metrics over the most recent hour sampled over 15 seconds. • 1d: Metrics over the most recent day sampled over 5 minutes. • 1w: Metrics over the most recent week sampled over 30 minutes. • 1m: Metrics over the most recent month sampled over 2 hours. • 1y: Metrics over the most recent year sampled over a day. • Default value: 1 • enum: ["1h", "1d", "1w", "1m", "1y"]

Name	Type	In	Required	Description
return_timeout	integer	query	False	The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached. • Default value: 15 • Max value: 120 • Min value: 0
fields	array[string]	query	False	Specify the fields to return.
max_records	integer	query	False	Limit the number of records returned.
order_by	array[string]	query	False	Order results by specified fields and optional [asc
desc] direction. Default direction is 'asc' for ascending.	return_records	boolean	query	False

Response

Status: 200, Ok

Name	Type	Description
_links	_links	
num_records	integer	Number of records
records	array[records]

iops

The rate of I/O operations observed at the storage object.

Name	Type	Description
other	integer	Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on.
read	integer	Performance metric for read I/O operations.
total	integer	Performance metric aggregated over all types of I/O operations.
write	integer	Performance metric for write I/O operations.

latency

The round trip latency in microseconds observed at the storage object.

Name	Type	Description
other	integer	Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on.
read	integer	Performance metric for read I/O operations.
total	integer	Performance metric aggregated over all types of I/O operations.
write	integer	Performance metric for write I/O operations.

throughput

The rate of throughput bytes per second observed at the storage object.

Name	Type	Description
other	integer	Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on.
read	integer	Performance metric for read I/O operations.
total	integer	Performance metric aggregated over all types of I/O operations.
write	integer	Performance metric for write I/O operations.

records

Performance numbers, such as IOPS latency and throughput.

Name	Type	Description
_links	_links	

Name	Type	Description
duration	string	The duration over which this sample is calculated. The time durations are represented in the ISO-8601 standard format. Samples can be calculated over the following durations:
iops	iops	The rate of I/O operations observed at the storage object.
latency	latency	The round trip latency in microseconds observed at the storage object.
status	string	Errors associated with the sample. For example, if the aggregation of data over multiple nodes fails, then any partial errors might return "ok" on success or "error" on an internal uncategorized failure. Whenever a sample collection is missed but done at a later time, it is back filled to the previous 15 second timestamp and tagged with "backfilled_data". "Inconsistent_delta_time" is encountered when the time between two collections is not the same for all nodes. Therefore, the aggregated value might be over or under inflated. "Negative_delta" is returned when an expected monotonically increasing value has decreased in value. "Inconsistent_old_data" is returned when one or more nodes do not have the latest data.
throughput	throughput	The rate of throughput bytes per second observed at the storage object.
timestamp	string	The timestamp of the performance data.

error_arguments

Name	Type	Description
code	string	Argument code
message	string	Message argument

returned_error

Name	Type	Description
arguments	array[error_arguments]	Message arguments
code	string	Error code
message	string	Error message
target	string	The target parameter that caused the error.
