# Manage network IP routes

## Network IP routes endpoint overview

### Overview

This endpoint supports the following operations: GET (collection and instance), POST, and DELETE.

### Retrieving network routes

You can use the IP routes GET API to retrieve and display relevant information pertaining to the routes configured in the cluster. The API retrieves the list of all routes configured in the cluster, or a specific route. The fields that are returned in the response will differ with the configuration.

### Examples

#### Retrieving all routes in the cluster

The following output shows the list of all routes configured in a cluster.

## Retrieving a specific Cluster-scoped route

The following output shows the returned response when a specific Cluster-scoped route is requested. The system returns an error if there is no route with the requested UUID. SVM information is not returned for Cluster-scoped routes.

```

# The API:

## Creating network routes

You can use the POST API to create an SVM-scoped route by specifying the associated SVM, or a Cluster-scoped route by specifying the associated IPspace.

## Examples

### Creating a Cluster-scoped route

IPspace is required to create a Cluster-scoped route. If the IPspace is not specified, the route will be created in the Default IPspace. The default destination will be set to "0.0.0.0/0" for IPv4 gateway addresses or "::/0" for IPv6 gateway addresses.

```
# The API:  
/api/network/ip/routes  
  
# The call:  
curl -X POST "https://<mgmt-ip>/api/network/ip/routes?return_records=true"  
-H "accept: application/json" -d '{ "ipspace": { "name": "ips1" },  
"gateway": "10.10.10.1"}'  
  
# The response:  
{  
  "num_records": 1,  
  "records": [  
    {  
      "uuid": "ae583c9e-9ac7-11e8-8bc9-005056bbd531",  
      "ipspace": {  
        "name": "ips1"  
      },  
      "gateway": "10.10.10.1"  
    }  
  ]  
}
```

### Creating an SVM-scoped route

To create an SVM-scoped route, the associated SVM can be identified by either its UUID or name.

```

# The API:
/api/network/ip/routes

# The call:
curl -X POST "https://<mgmt-ip>/api/network/ip/routes?return_records=true"
-H "accept: application/json" -d '{ "svm": { "name":"vs0" }, "gateway":
"10.10.10.1"}'

# The response:
{
  "num_records": 1,
  "records": [
    {
      "uuid": "38805a91-9ac9-11e8-8bc9-005056bbd531",
      "svm": {
        "name": "vs0"
      },
      "gateway": "10.10.10.1"
    }
  ]
}

```

## Deleting network routes

You can use the DELETE API to delete a specific route identified by its UUID.

### Example

#### Deleting a specific route

```

# The API:
/api/network/ip/routes/{uuid}

# The call:
curl -X DELETE "https://<mgmt-ip>/api/network/ip/routes/38805a91-9ac9-
11e8-8bc9-005056bbd531"

```

# Retrieve IP routes

GET /network/ip/routes

Retrieves the collection of IP routes.

| destination.address | string        | query | False    | Filter by destination.address         |
| destination.family  | string        | query | False    | Filter by destination.family          |
| svm.uuid            | string        | query | False    | Filter by svm.uuid                    |
| svm.name            | string        | query | False    | Filter by svm.name                    |
| fields              | array[string] | query | False    | Specify the fields to return.         |
| max_records         | integer       | query | False    | Limit the number of records returned. |

| Name           | Type          | In    | Required | Description  |
|----------------|---------------|-------|----------|--|
| return_records | boolean       | query | False    | The default is true for GET calls. When set to false, only the number of records is returned.  |
| return_timeout | integer       | query | False    | The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached. |
| order_by       | array[string] | query | False    | Order results by specified fields and optional [asc  |

## Create a cluster-scoped or SVM-scoped static route

POST /network/ip/routes

Creates a Cluster-scoped or SVM-scoped static route.

### Required properties

- gateway - IP address to route packets to.
- SVM-scoped routes
  - svm.name or svm.uuid - SVM that route is applied to.
- cluster-scoped routes
  - There are no additional required fields for Cluster-scoped routes.

### Default property values

If not specified in POST, the following default property values are assigned:

- destination - 0.0.0.0/0 for IPv4 or ::/0 for IPv6.
- ipspace.name
  - *Default* for Cluster-scoped routes.
  - Name of the SVM's IPspace for SVM-scoped routes.
