Manage FC services for SVMs

Protocols SAN fcp services endpoint overview

Overview

A Fibre Channel Protocol (FC Protocol) service defines the properties of the FC Protocol target for an SVM. There can be at most one FC Protocol service for an SVM. An SVM FC Protocol service must be created before FC Protocol initiators can log in to the SVM.

The FC Protocol service REST API allows you to create, update, delete, and discover FC services for SVMs.

Performance monitoring

Performance of the SVM can be monitored by the `metric.*` and `statistics.*` properties. These show the performance of the SVM in terms of IOPS, latency, and throughput. The `metric.*` properties denote an average whereas `statistics.*` properties denote a real-time monotonically increasing value aggregated across all nodes.

Examples

Creating an FC Protocol service for an SVM

The simplest way to create an FC Protocol service is to specify only the SVM, either by name or UUID. By default, the new FC Protocol service is enabled.

In this example, the `return_records` query parameter is used to retrieve the new FC Protocol service object in the REST response.

```
# The API:
POST /api/protocols/san/fcp/services

# The call:
curl -X POST 'https://<mgmt-
ip>/api/protocols/san/fcp/services?return_records=true' -H 'accept:
application/hal+json' -d '{ "svm": { "name": "svm1" } }'

# The response:
{
  "num_records": 1,
  "records": [
    {
      "svm": {
        "uuid": "5c659d90-c01a-11e8-88ed-005056bbb24b",
        "name": "svm1",
        "_links": {
          "self": {
            "href": "/api/svm/svms/5c659d90-c01a-11e8-88ed-005056bbb24b"
          }
        }
      },
      "enabled": true,
      "target": {
        "name": "20:00:00:50:56:bb:b2:4b"
      },
      "_links": {
        "self": {
          "href": "/api/protocols/san/fcp/services/5c659d90-c01a-11e8-88ed-
005056bbb24b"
        }
      }
    }
  ]
}
```

Retrieving FC Protocol services for all SVMs in the cluster

```
# The API:
GET /api/protocols/san/fcp/services

# The call:
curl -X GET 'https://<mgmt-ip>/api/protocols/san/fcp/services' -H 'accept:
```

```
application/hal+json'
```

```
# The response:
```

```
{
  "records": [
    {
      "svm": {
        "uuid": "5c659d90-c01a-11e8-88ed-005056bbb24b",
        "name": "svm1",
        "_links": {
          "self": {
            "href": "/api/svm/svms/5c659d90-c01a-11e8-88ed-005056bbb24b"
          }
        }
      },
      "_links": {
        "self": {
          "href": "/api/protocols/san/fcp/services/5c659d90-c01a-11e8-88ed-005056bbb24b"
        }
      }
    },
    {
      "svm": {
        "uuid": "6011f874-c01a-11e8-88ed-005056bbb24b",
        "name": "svm2",
        "_links": {
          "self": {
            "href": "/api/svm/svms/6011f874-c01a-11e8-88ed-005056bbb24b"
          }
        }
      },
      "_links": {
        "self": {
          "href": "/api/protocols/san/fcp/services/6011f874-c01a-11e8-88ed-005056bbb24b"
        }
      }
    }
  ],
  "num_records": 2,
  "_links": {
    "self": {
      "href": "/api/protocols/san/fcp/services"
    }
  }
}
```

```
}
```

Retrieving details for a specific FC Protocol service

The FC Protocol service is identified by the UUID of its SVM.

```
# The API:
GET /api/protocols/san/fcp/services/{svm.uuid}

# The call:
curl -X GET 'https://<mgmt-ip>/api/protocols/san/fcp/services/5c659d90-
c01a-11e8-88ed-005056bbb24b' -H 'accept: application/hal+json'

# The response:
{
  "svm": {
    "uuid": "5c659d90-c01a-11e8-88ed-005056bbb24b",
    "name": "svm1",
    "_links": {
      "self": {
        "href": "/api/svm/svms/5c659d90-c01a-11e8-88ed-005056bbb24b"
      }
    }
  },
  "enabled": true,
  "target": {
    "name": "20:00:00:50:56:bb:b2:4b"
  },
  "_links": {
    "self": {
      "href": "/api/protocols/san/fcp/services/5c659d90-c01a-11e8-88ed-
005056bbb24b"
    }
  }
}
```

Disabling an FC Protocol service

Disabling an FC Protocol service shuts down all active FC Protocol logins for the SVM and prevents new FC Protocol logins.

The FC Protocol service to update is identified by the UUID of its SVM.

```
# The API:
PATCH /api/protocols/san/fcp/services/{svm.uuid}

# The call:
curl -X PATCH 'https://<mgmt-ip>/api/protocols/san/fcp/services/5c659d90-
c01a-11e8-88ed-005056bbb24b' -H 'accept: application/hal+json' -d '{
"enabled": "false" }'
```

You can retrieve the FC Protocol service to confirm the change.

In this example, the `fields` query parameter is used to limit the response to the `enabled` property and FC Protocol service identifiers.

```
# The API:
GET /api/protocols/san/fcp/services/{svm.uuid}

# The call:
curl -X GET 'https://<mgmt-ip>/api/protocols/san/fcp/services/5c659d90-
c01a-11e8-88ed-005056bbb24b?fields=enabled' -H 'accept:
application/hal+json'

# The response:
{
  "svm": {
    "uuid": "5c659d90-c01a-11e8-88ed-005056bbb24b",
    "name": "svm1",
    "_links": {
      "self": {
        "href": "/api/svm/svms/5c659d90-c01a-11e8-88ed-005056bbb24b"
      }
    }
  },
  "enabled": false,
  "_links": {
    "self": {
      "href": "/api/protocols/san/fcp/services/5c659d90-c01a-11e8-88ed-
005056bbb24b"
    }
  }
}
```

Deleting an FC Protocol service

The FC Protocol service must be disabled before it can be deleted.

The FC Protocol service to delete is identified by the UUID of its SVM.

```
# The API:
DELETE /api/protocols/san/fcp/services/{svm.uuid}

# The call:
curl -X DELETE 'https://<mgmt-ip>/api/protocols/san/fcp/services/5c659d90-c01a-11e8-88ed-005056bbb24b' -H 'accept: application/hal+json'
```

Retrieve FC protocol services

GET /protocols/san/fcp/services

Introduced In: 9.6

Retrieves FC Protocol services.

Expensive properties

There is an added cost to retrieving values for these properties. They are not included by default in GET results and must be explicitly requested using the `fields` query parameter. See [Requesting specific fields](#) to learn more.

- `statistics.*`
- `metric.*`

Related ONTAP commands

- `vserver fcp show`

Parameters

| Name | Type | In | Required | Description |
|----------|--------|-------|----------|--------------------|
| svm.uuid | string | query | False | Filter by svm.uuid |
| svm.name | string | query | False | Filter by svm.name |

| Name | Type | In | Required | Description |
|-------------------------|---------|-------|----------|--|
| metric.timestamp | string | query | False | Filter by metric.timestamp <ul style="list-style-type: none"> • Introduced in: 9.7 |
| metric.throughput.total | integer | query | False | Filter by metric.throughput.total <ul style="list-style-type: none"> • Introduced in: 9.7 |
| metric.throughput.read | integer | query | False | Filter by metric.throughput.read <ul style="list-style-type: none"> • Introduced in: 9.7 |
| metric.throughput.write | integer | query | False | Filter by metric.throughput.write <ul style="list-style-type: none"> • Introduced in: 9.7 |
| metric.latency.total | integer | query | False | Filter by metric.latency.total <ul style="list-style-type: none"> • Introduced in: 9.7 |
| metric.latency.other | integer | query | False | Filter by metric.latency.other <ul style="list-style-type: none"> • Introduced in: 9.7 |
| metric.latency.read | integer | query | False | Filter by metric.latency.read <ul style="list-style-type: none"> • Introduced in: 9.7 |

| Name | Type | In | Required | Description |
|----------------------|---------|-------|----------|--|
| metric.latency.write | integer | query | False | Filter by metric.latency.write • Introduced in: 9.7 |
| metric.iops.total | integer | query | False | Filter by metric.iops.total • Introduced in: 9.7 |
| metric.iops.other | integer | query | False | Filter by metric.iops.other • Introduced in: 9.7 |
| metric.iops.read | integer | query | False | Filter by metric.iops.read • Introduced in: 9.7 |
| metric.iops.write | integer | query | False | Filter by metric.iops.write • Introduced in: 9.7 |
| metric.duration | string | query | False | Filter by metric.duration • Introduced in: 9.7 |
| metric.status | string | query | False | Filter by metric.status • Introduced in: 9.7 |
| enabled | boolean | query | False | Filter by enabled |
| statistics.timestamp | string | query | False | Filter by statistics.timestamp • Introduced in: 9.7 |

| Name | Type | In | Required | Description |
|------------------------------|---------|-------|----------|--|
| statistics.iops_raw.total | integer | query | False | Filter by statistics.iops_raw.total • Introduced in: 9.7 |
| statistics.iops_raw.other | integer | query | False | Filter by statistics.iops_raw.other • Introduced in: 9.7 |
| statistics.iops_raw.read | integer | query | False | Filter by statistics.iops_raw.read • Introduced in: 9.7 |
| statistics.iops_raw.write | integer | query | False | Filter by statistics.iops_raw.write • Introduced in: 9.7 |
| statistics.latency_raw.total | integer | query | False | Filter by statistics.latency_raw.total • Introduced in: 9.7 |
| statistics.latency_raw.other | integer | query | False | Filter by statistics.latency_raw.other • Introduced in: 9.7 |
| statistics.latency_raw.read | integer | query | False | Filter by statistics.latency_raw.read • Introduced in: 9.7 |

| Name | Type | In | Required | Description |
|---------------------------------|---------------|-------|----------|---|
| statistics.latency_raw.write | integer | query | False | Filter by statistics.latency_raw.write • Introduced in: 9.7 |
| statistics.status | string | query | False | Filter by statistics.status • Introduced in: 9.7 |
| statistics.throughput_raw.total | integer | query | False | Filter by statistics.throughput_raw.total • Introduced in: 9.7 |
| statistics.throughput_raw.read | integer | query | False | Filter by statistics.throughput_raw.read • Introduced in: 9.7 |
| statistics.throughput_raw.write | integer | query | False | Filter by statistics.throughput_raw.write • Introduced in: 9.7 |
| target.name | string | query | False | Filter by target.name |
| fields | array[string] | query | False | Specify the fields to return. |
| max_records | integer | query | False | Limit the number of records returned. |
| return_records | boolean | query | False | The default is true for GET calls. When set to false, only the number of records is returned. • Default value: 1 |

| Name | Type | In | Required | Description |
|----------------|---------------|-------|----------|--|
| return_timeout | integer | query | False | <p>The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached.</p> <ul style="list-style-type: none"> • Default value: 1 • Max value: 120 • Min value: 0 |
| order_by | array[string] | query | False | Order results by specified fields and optional [asc |

iops

The rate of I/O operations observed at the storage object.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

latency

The round trip latency in microseconds observed at the storage object.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

throughput

The rate of throughput bytes per second observed at the storage object.

| Name | Type | Description |
|-------|---------|---|
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

metric

| Name | Type | Description |
|------------------------|------------------------|--|
| _links | _links | |
| duration | string | The duration over which this sample is calculated. The time durations are represented in the ISO-8601 standard format. Samples can be calculated over the following durations: |
| iops | iops | The rate of I/O operations observed at the storage object. |

| Name | Type | Description |
|------------|----------------------------|---|
| latency | latency | The round trip latency in microseconds observed at the storage object. |
| status | string | Any errors associated with the sample. For example, if the aggregation of data over multiple nodes fails then any of the partial errors might be returned, "ok" on success, or "error" on any internal uncategorized failure. Whenever a sample collection is missed but done at a later time, it is back filled to the previous 15 second timestamp and tagged with "backfilled_data". "Inconsistent_delta_time" is encountered when the time between two collections is not the same for all nodes. Therefore, the aggregated value might be over or under inflated. "Negative_delta" is returned when an expected monotonically increasing value has decreased in value. "Inconsistent_old_data" is returned when one or more nodes do not have the latest data. |
| throughput | throughput | The rate of throughput bytes per second observed at the storage object. |
| timestamp | string | The timestamp of the performance data. |

iops_raw

The number of I/O operations observed at the storage object. This should be used along with delta time to calculate the rate of I/O operations per unit of time.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |

| Name | Type | Description |
|-------|---------|---|
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

latency_raw

The raw latency in microseconds observed at the storage object. This should be divided by the raw IOPS value to calculate the average latency per I/O operation.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

throughput_raw

Throughput bytes observed at the storage object. This should be used along with delta time to calculate the rate of throughput bytes per unit of time.

| Name | Type | Description |
|-------|---------|---|
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

statistics

| Name | Type | Description |
|----------------|--------------------------------|---|
| iops_raw | iops_raw | The number of I/O operations observed at the storage object. This should be used along with delta time to calculate the rate of I/O operations per unit of time. |
| latency_raw | latency_raw | The raw latency in microseconds observed at the storage object. This should be divided by the raw IOPS value to calculate the average latency per I/O operation. |
| status | string | Any errors associated with the sample. For example, if the aggregation of data over multiple nodes fails then any of the partial errors might be returned, "ok" on success, or "error" on any internal uncategorized failure. Whenever a sample collection is missed but done at a later time, it is back filled to the previous 15 second timestamp and tagged with "backfilled_data". "Inconsistent_delta_time" is encountered when the time between two collections is not the same for all nodes. Therefore, the aggregated value might be over or under inflated. "Negative_delta" is returned when an expected monotonically increasing value has decreased in value. "Inconsistent_old_data" is returned when one or more nodes do not have the latest data. |
| throughput_raw | throughput_raw | Throughput bytes observed at the storage object. This should be used along with delta time to calculate the rate of throughput bytes per unit of time. |
| timestamp | string | The timestamp of the performance data. |

svm

| Name | Type | Description |
|--------|------------------------|-----------------------------------|
| _links | _links | |
| name | string | The name of the SVM. |
| uuid | string | The unique identifier of the SVM. |

target

| Name | Type | Description |
|------|--------|--|
| name | string | <p>The target name of the FC Protocol service. This is generated for the SVM during POST.</p> <p>The FC Protocol target name is a world wide node name (WWNN).</p> <p>If required, the target name can be modified using the ONTAP command line.</p> <ul style="list-style-type: none">• example: 20:00:00:50:56:bb:b2:4b• maxLength: 128• minLength: 1• readOnly: 1• Introduced in: 9.6 |

fcp_service

A Fibre Channel (FC) Protocol service defines the properties of the FC Protocol target for an SVM. There can be at most one FC Protocol service for an SVM. An SVM's FC Protocol service must be created before FC Protocol initiators can login to the SVM.

A FC Protocol service is identified by the UUID of its SVM.

| Name | Type | Description |
|--------|------------------------|-------------|
| _links | _links | |

| Name | Type | Description |
|------------|----------------------------|---|
| enabled | boolean | The administrative state of the FC Protocol service. The FC Protocol service can be disabled to block all FC Protocol connectivity to the SVM. This is optional in POST and PATCH. The default setting is <i>true</i> (enabled) in POST. |
| metric | metric | |
| statistics | statistics | |
| svm | svm | |
| target | target | |

error_arguments

| Name | Type | Description |
|---------|--------|------------------|
| code | string | Argument code |
| message | string | Message argument |

error

| Name | Type | Description |
|-----------|--|---|
| arguments | array[error_arguments] | Message arguments |
| code | string | Error code |
| message | string | Error message |
| target | string | The target parameter that caused the error. |

Create an FC protocol service

POST /protocols/san/fcp/services

Introduced In: 9.6

Creates an FC Protocol service.

Required properties

- `svm.uuid` or `svm.name` - Existing SVM in which to create the FC Protocol service.

Related ONTAP commands

- `vserver fcp create`

Learn more

- [DOC /protocols/san/fcp/services](#)

Parameters

| Name | Type | In | Required | Description |
|----------------|---------|-------|----------|---|
| return_records | boolean | query | False | The default is false. If set to true, the records are returned. • Default value: |

Request Body

| Name | Type | Description |
|------------|----------------------------|---|
| _links | _links | |
| enabled | boolean | The administrative state of the FC Protocol service. The FC Protocol service can be disabled to block all FC Protocol connectivity to the SVM. This is optional in POST and PATCH. The default setting is <i>true</i> (enabled) in POST. |
| metric | metric | |
| statistics | statistics | |
| svm | svm | |
| target | target | |

Error

Status: Default

ONTAP Error Response Codes

| Error Code | Description |
|------------|--|
| 1115127 | The cluster lacks a valid FCP license. |
| 2621462 | The supplied SVM does not exist. |
| 2621507 | The Fibre Channel Protocol is not allowed for the specified SVM. |

| Error Code | Description |
|------------|---|
| 2621706 | The specified <code>svm.uuid</code> and <code>svm.name</code> do not refer to the same SVM. |
| 2621707 | No SVM was specified. Either <code>svm.name</code> or <code>svm.uuid</code> must be supplied. |
| 5374082 | The Fibre Channel Protocol service already exists for the SVM. |
| 5374092 | The Fibre Channel Protocol is not supported on the cluster hardware configuration; there are no Fibre Channel adapters. |
| 5374893 | The SVM is stopped. The SVM must be running to create a Fibre Channel Protocol service. |

iops

The rate of I/O operations observed at the storage object.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

latency

The round trip latency in microseconds observed at the storage object.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |

| Name | Type | Description |
|-------|---------|---|
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

throughput

The rate of throughput bytes per second observed at the storage object.

| Name | Type | Description |
|-------|---------|---|
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

metric

| Name | Type | Description |
|----------|-------------------------|--|
| _links | _links | |
| duration | string | The duration over which this sample is calculated. The time durations are represented in the ISO-8601 standard format. Samples can be calculated over the following durations: |
| iops | iops | The rate of I/O operations observed at the storage object. |
| latency | latency | The round trip latency in microseconds observed at the storage object. |

| Name | Type | Description |
|------------|------------|---|
| status | string | Any errors associated with the sample. For example, if the aggregation of data over multiple nodes fails then any of the partial errors might be returned, "ok" on success, or "error" on any internal uncategorized failure. Whenever a sample collection is missed but done at a later time, it is back filled to the previous 15 second timestamp and tagged with "backfilled_data". "Inconsistent_delta_time" is encountered when the time between two collections is not the same for all nodes. Therefore, the aggregated value might be over or under inflated. "Negative_delta" is returned when an expected monotonically increasing value has decreased in value. "Inconsistent_old_data" is returned when one or more nodes do not have the latest data. |
| throughput | throughput | The rate of throughput bytes per second observed at the storage object. |
| timestamp | string | The timestamp of the performance data. |

iops_raw

The number of I/O operations observed at the storage object. This should be used along with delta time to calculate the rate of I/O operations per unit of time.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |

| Name | Type | Description |
|-------|---------|---|
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

latency_raw

The raw latency in microseconds observed at the storage object. This should be divided by the raw IOPS value to calculate the average latency per I/O operation.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

throughput_raw

Throughput bytes observed at the storage object. This should be used along with delta time to calculate the rate of throughput bytes per unit of time.

| Name | Type | Description |
|-------|---------|---|
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

statistics

| Name | Type | Description |
|----------------|--------------------------------|---|
| iops_raw | iops_raw | The number of I/O operations observed at the storage object. This should be used along with delta time to calculate the rate of I/O operations per unit of time. |
| latency_raw | latency_raw | The raw latency in microseconds observed at the storage object. This should be divided by the raw IOPS value to calculate the average latency per I/O operation. |
| status | string | Any errors associated with the sample. For example, if the aggregation of data over multiple nodes fails then any of the partial errors might be returned, "ok" on success, or "error" on any internal uncategorized failure. svm

| Name | Type | Description |
|--------|------------------------|-----------------------------------|
| _links | _links | |
| name | string | The name of the SVM. |
| uuid | string | The unique identifier of the SVM. |

target

| Name | Type | Description |
|------|--------|--|
| name | string | <p>The target name of the FC Protocol service. This is generated for the SVM during POST.</p> <p>The FC Protocol target name is a world wide node name (WWNN).</p> <p>If required, the target name can be modified using the ONTAP command line.</p> <ul style="list-style-type: none"> • example: 20:00:00:50:56:bb:b2:4b • maxLength: 128 • minLength: 1 • readOnly: 1 • Introduced in: 9.6 |

fcp_service

A Fibre Channel (FC) Protocol service defines the properties of the FC Protocol target for an SVM. There can be at most one FC Protocol service for an SVM. An SVM's FC Protocol service must be created before FC Protocol initiators can login to the SVM.

A FC Protocol service is identified by the UUID of its SVM.

| Name | Type | Description |
|--------|------------------------|-------------|
| _links | _links | |

| Name | Type | Description |
|------------|----------------------------|---|
| enabled | boolean | The administrative state of the FC Protocol service. The FC Protocol service can be disabled to block all FC Protocol connectivity to the SVM. This is optional in POST and PATCH. The default setting is <i>true</i> (enabled) in POST. |
| metric | metric | |
| statistics | statistics | |
| svm | svm | |
| target | target | |

| arguments | array[error_arguments] | Message arguments |
| code | string | Error code |
| message | string | Error message |
| target | string | The target parameter that caused the error. |

Delete an FC protocol service

DELETE /protocols/san/fcp/services/{svm.uuid}

Introduced In: 9.6

Deletes an FC Protocol service. An FC Protocol service must be disabled before it can be deleted.

Related ONTAP commands

- `vserver fcp delete`

Learn more

- [DOC /protocols/san/fcp/services](#)

Parameters

| Name | Type | In | Required | Description |
|----------|--------|------|----------|---|
| svm.uuid | string | path | True | The unique identifier of the SVM for which to delete the FC Protocol service. |

Response

Status: 200, Ok

Error

| href | string | |

_links

| Name | Type | Description |
|------|----------------------|-------------|
| self | href | |

iops

The rate of I/O operations observed at the storage object.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

latency

The round trip latency in microseconds observed at the storage object.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |

| Name | Type | Description |
|-------|---------|---|
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

throughput

The rate of throughput bytes per second observed at the storage object.

| Name | Type | Description |
|-------|---------|---|
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

metric

| Name | Type | Description |
|----------|-------------------------|--|
| _links | _links | |
| duration | string | The duration over which this sample is calculated. The time durations are represented in the ISO-8601 standard format. Samples can be calculated over the following durations: |
| iops | iops | The rate of I/O operations observed at the storage object. |
| latency | latency | The round trip latency in microseconds observed at the storage object. |

| Name | Type | Description |
|------------|------------|---|
| status | string | Any errors associated with the sample. For example, if the aggregation of data over multiple nodes fails then any of the partial errors might be returned, "ok" on success, or "error" on any internal uncategorized failure. Whenever a sample collection is missed but done at a later time, it is back filled to the previous 15 second timestamp and tagged with "backfilled_data". "Inconsistent_delta_time" is encountered when the time between two collections is not the same for all nodes. Therefore, the aggregated value might be over or under inflated. "Negative_delta" is returned when an expected monotonically increasing value has decreased in value. "Inconsistent_old_data" is returned when one or more nodes do not have the latest data. |
| throughput | throughput | The rate of throughput bytes per second observed at the storage object. |
| timestamp | string | The timestamp of the performance data. |

iops_raw

The number of I/O operations observed at the storage object. This should be used along with delta time to calculate the rate of I/O operations per unit of time.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |

| Name | Type | Description |
|-------|---------|---|
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

latency_raw

The raw latency in microseconds observed at the storage object. This should be divided by the raw IOPS value to calculate the average latency per I/O operation.

| Name | Type | Description |
|-------|---------|--|
| other | integer | Performance metric for other I/O operations. Other I/O operations can be metadata operations, such as directory lookups and so on. |
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

throughput_raw

Throughput bytes observed at the storage object. This should be used along with delta time to calculate the rate of throughput bytes per unit of time.

| Name | Type | Description |
|-------|---------|---|
| read | integer | Performance metric for read I/O operations. |
| total | integer | Performance metric aggregated over all types of I/O operations. |
| write | integer | Performance metric for write I/O operations. |

statistics

| Name | Type | Description |
|----------------|--------------------------------|---|
| iops_raw | iops_raw | The number of I/O operations observed at the storage object. This should be used along with delta time to calculate the rate of I/O operations per unit of time. |
| latency_raw | latency_raw | The raw latency in microseconds observed at the storage object. This should be divided by the raw IOPS value to calculate the average latency per I/O operation. |
| status | string | Any errors associated with the sample. For example, if the aggregation of data over multiple nodes fails then any of the partial errors might be returned, "ok" on success, or "error" on any internal uncategorized failure. Whenever a sample collection is missed but done at a later time, it is back filled to the previous 15 second timestamp and tagged with "backfilled_data". "Inconsistent_delta_time" is encountered when the time between two collections is not the same for all nodes. Therefore, the aggregated value might be over or under inflated. "Negative_delta" is returned when an expected monotonically increasing value has decreased in value. "Inconsistent_old_data" is returned when one or more nodes do not have the latest data. |
| throughput_raw | throughput_raw | Throughput bytes observed at the storage object. This should be used along with delta time to calculate the rate of throughput bytes per unit of time. |
| timestamp | string | The timestamp of the performance data. |

svm

| Name | Type | Description |
|--------|------------------------|-----------------------------------|
| _links | _links | |
| name | string | The name of the SVM. |
| uuid | string | The unique identifier of the SVM. |

target

| Name | Type | Description |
|------|--------|--|
| name | string | <p>The target name of the FC Protocol service. This is generated for the SVM during POST.</p> <p>The FC Protocol target name is a world wide node name (WWNN).</p> <p>If required, the target name can be modified using the ONTAP command line.</p> <ul style="list-style-type: none"> • example: 20:00:00:50:56:bb:b2:4b • maxLength: 128 • minLength: 1 • readOnly: 1 • Introduced in: 9.6 |

fcp_service

A Fibre Channel (FC) Protocol service defines the properties of the FC Protocol target for an SVM. There can be at most one FC Protocol service for an SVM. An SVM's FC Protocol service must be created before FC Protocol initiators can login to the SVM.

A FC Protocol service is identified by the UUID of its SVM.

| Name | Type | Description |
|--------|------------------------|-------------|
| _links | _links | |

| Name | Type | Description |
|------------|----------------------------|---|
| enabled | boolean | The administrative state of the FC Protocol service. The FC Protocol service can be disabled to block all FC Protocol connectivity to the SVM. This is optional in POST and PATCH. The default setting is <i>true</i> (enabled) in POST. |
| metric | metric | |
| statistics | statistics | |
| svm | svm | |
| target | target | |

error_arguments

| Name | Type | Description |
|---------|--------|------------------|
| code | string | Argument code |
| message | string | Message argument |

error

| Name | Type | Description |
|-----------|--|---|
| arguments | array[error_arguments] | Message arguments |
| code | string | Error code |
| message | string | Error message |
| target | string | The target parameter that caused the error. |

Retrieve historical performance metrics for the FC protocol service of an SVM

GET /protocols/san/fcp/services/{svm.uuid}/metrics

Introduced In: 9.7

Retrieves historical performance metrics for the FC Protocol service of an SVM.

Parameters

| Name | Type | In | Required | Description |
|------------------|---------|-------|----------|-----------------------------------|
| latency.total | integer | query | False | Filter by latency.total |
| latency.other | integer | query | False | Filter by latency.other |
| latency.read | integer | query | False | Filter by latency.read |
| latency.write | integer | query | False | Filter by latency.write |
| iops.total | integer | query | False | Filter by iops.total |
| iops.other | integer | query | False | Filter by iops.other |
| iops.read | integer | query | False | Filter by iops.read |
| iops.write | integer | query | False | Filter by iops.write |
| timestamp | string | query | False | Filter by timestamp |
| throughput.total | integer | query | False | Filter by throughput.total |
| throughput.read | integer | query | False | Filter by throughput.read |
| throughput.write | integer | query | False | Filter by throughput.write |
| duration | string | query | False | Filter by duration |
| status | string | query | False | Filter by status |
| svm.uuid | string | path | True | The unique identifier of the SVM. |

| Name | Type | In | Required | Description |
|----------|--------|-------|----------|---|
| interval | string | query | False | <p>The time range for the data. Examples can be 1h, 1d, 1m, 1w, 1y. The period for each time range is as follows:</p> <ul style="list-style-type: none"> • 1h: Metrics over the most recent hour sampled over 15 seconds. • 1d: Metrics over the most recent day sampled over 5 minutes. • 1w: Metrics over the most recent week sampled over 30 minutes. • 1m: Metrics over the most recent month sampled over 2 hours. • 1y: Metrics over the most recent year sampled over a day. • Default value: 1 • enum: ["1h", "1d", "1w", "1m", "1y"] |

| Name | Type | In | Required | Description |
|--|----------------|---------|----------|--|
| return_timeout | integer | query | False | <p>The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached.</p> <ul style="list-style-type: none"> • Default value: 1 • Max value: 120 • Min value: 0 |
| fields | array[string] | query | False | Specify the fields to return. |
| max_records | integer | query | False | Limit the number of records returned. |
| order_by | array[string] | query | False | Order results by specified fields and optional [asc |
| desc] direction. Default direction is 'asc' for ascending. | return_records | boolean | query | False |

Response

Status: 200, Ok

| Name | Type | Description |
|-------------|----------------------------------|-------------------|
| _links | _links | |
| num_records | integer | Number of records |
| records | array[records] | |
