Manage SVM FPolicy configuration

Protocols fpolicy svm.uuid policies endpoint overview

Overview

The FPolicy policy acts as a container for different constituents of the FPolicy such as FPolicy events and the FPolicy engine. It also provides a platform for policy management functions, such as policy enabling and disabling. As part of FPolicy policy configuration, you can specify the name of policy, the SVM to which it belongs, the FPolicy events to monitor, the FPolicy engine to which the generated notifications are sent and the policy priority. FPolicy policy configuration also allows you to configure the file access behaviour when the primary and secondary servers are down. Under such circumstances, if the "mandatory" field is set to true, file access is denied.

Each FPolicy policy is associated with a scope which allows you to restrain the scope of the policy to specified storage objects such as volume, shares and export or to a set of file extensions such as .txt, .jpeg. An FPolicy policy can be configured to send notifications, to the FPolicy server or for native file blocking which uses the file extension specified in the policy scope. An SVM can have multiple FPolicy policies which can be enabled or disabled independently of each other.

Examples

Creating an FPolicy policy

Use the following API to create an FPolicy policy configuration. Note that the *return_records=true* query parameter is used to obtain the newly created entry in the response.

```
# The API:
POST /protocols/fpolicy/{svm.uuid}/policies

# The call:
curl -X POST "https://<mgmt-ip>/api/protocols/fpolicy/a00fac5d-0164-11e9-b64a-0050568eeb34/policies?return_records=true" -H "accept: application/json" -H "Content-Type: application/json" -d "{ \"engine\": { \"name\": \"engine1\" }, \"events\": [ { \"name\": \"cifs\" }, { \"name\": \"nfs\" } ], \"mandatory\": true, \"name\": \"FPolicy_policy_0\", \"passthrough_read\": true, \"privileged_user\": \"mydomain\\\\\\\\testuser\", \"scope\": { \"exclude_export_policies\": [ \"export_pol1\" ], \"exclude_extension\": [ \".txt\", \".png\" ], \"exclude_shares\": [ \"sh1\" ], \"exclude_volumes\": [ \"vol0\" ], \"include_export_policies\": [ \"export_pol10\" ], \"include_extension\": [ \".pdf\" ], \"include_shares\": [ \"sh2\", \"sh3\" ], \"include_volumes\": [ \"vol1\", \"vol2\" ] } }"

# The response:
{
```

```

"num_records": 1,
"records": [
  {
    "name": "FPolicy_policy_0",
    "events": [
      {
        "name": "cifs"
      },
      {
        "name": "nfs"
      }
    ],
    "engine": {
      "name": "engine1"
    },
    "scope": {
      "include_shares": [
        "sh2",
        "sh3"
      ],
      "exclude_shares": [
        "sh1"
      ],
      "include_volumes": [
        "vol1",
        "vol2"
      ],
      "exclude_volumes": [
        "vol0"
      ],
      "include_export_policies": [
        "export_pol10"
      ],
      "exclude_export_policies": [
        "export_pol1"
      ],
      "include_extension": [
        "pdf"
      ],
      "exclude_extension": [
        "txt",
        "png"
      ]
    },
    "mandatory": true,
    "privileged_user": "mydomain\\testuser",
  }
]

```

```
    "passthrough_read": true
  }
]
}
```

Creating and enable an FPolicy policy

```
# The API:
POST /protocols/fpolicy/{svm.uuid}/policies

# The call:
curl -X POST "https://<mgmt-ip>/api/protocols/fpolicy/a00fac5d-0164-11e9-b64a-0050568eeb34/policies?return_records=true" -H "accept: application/json" -H "Content-Type: application/json" -d "{ \"priority\": 1, \"engine\": { \"name\": \"engine1\" }, \"events\": [ { \"name\": \"cifs\" }, { \"name\": \"nfs\" } ], \"mandatory\": true, \"name\": \"FPolicy_policy_on\", \"passthrough_read\": false, \"scope\": { \"exclude_export_policies\": [ \"export_poll\" ], \"exclude_extension\": [ \"txt\", \"png\" ], \"exclude_shares\": [ \"sh1\" ], \"exclude_volumes\": [ \"vol0\" ], \"include_export_policies\": [ \"export_poll0\" ], \"include_extension\": [ \"pdf\" ], \"include_shares\": [ \"sh2\", \"sh3\" ], \"include_volumes\": [ \"vol1\", \"vol2\" ] } }"

# The response:
{
  "num_records": 1,
  "records": [
    {
      "name": "FPolicy_policy_0",
      "priority": 1,
      "events": [
        {
          "name": "cifs"
        },
        {
          "name": "nfs"
        }
      ],
      "engine": {
        "name": "engine1"
      },
      "scope": {
```

```
"include_shares": [
  "sh2",
  "sh3"
],
"exclude_shares": [
  "sh1"
],
"include_volumes": [
  "vol1",
  "vol2"
],
"exclude_volumes": [
  "vol0"
],
"include_export_policies": [
  "export_poll0"
],
"exclude_export_policies": [
  "export_poll1"
],
"include_extension": [
  "pdf"
],
"exclude_extension": [
  "txt",
  "png"
]
},
"mandatory": true,
"privileged_user": "mydomain\\testuser",
"passthrough_read": true
}
]
```

Creating an FPolicy policy with the minimum required fields and a native engine

```
# The API:
POST /protocols/fpolicy/{svm.uuid}/policies

# The call:
curl -X POST "https://<mgmt-ip>/api/protocols/fpolicy/a00fac5d-0164-11e9-b64a-0050568eeb34/policies?return_records=true" -H "accept: application/json" -H "Content-Type: application/json" -d "{ \"events\": [ { \"name\": \"cifs\" }, { \"name\": \"nfs\" } ], \"name\": \"pol_minimum_fields\", \"scope\": { \"include_volumes\": [ \"vol1\", \"vol2\" ] } }"

# The response:
{
  "num_records": 1,
  "records": [
    {
      "name": "pol_minimum_fields",
      "events": [
        {
          "name": "cifs"
        },
        {
          "name": "nfs"
        }
      ],
      "scope": {
        "include_volumes": [
          "vol1",
          "vol2"
        ]
      }
    }
  ]
}
```

Retrieving all the FPolicy policy configurations for an SVM

```
# The API:
GET /protocols/fpolicy/{svm.uuid}/policies

# The call:
```

```

curl -X GET "https://<mgmt-ip>/api/protocols/fpolicy/a00fac5d-0164-11e9-
b64a-0050568eeb34/policies?fields=*&return_records=true&return_timeout=15"

"Content-Type: application/json" -d "{ \"enabled\": true }"
```

Retrieve an FPolicy configuration for an SVM

GET /protocols/fpolicy/{svm.uuid}/policies

Introduced In: 9.6

Retrieves the FPolicy policy configuration of an SVM. ONTAP allows the creation of a cluster level FPolicy policy that acts as a template for all the data SVMs belonging to the cluster. This cluster level FPolicy policy is also retrieved for the specified SVM.

Related ONTAP commands

- `fpolicy policy show`
- `fpolicy policy scope show`

Parameters

Name	Type	In	Required	Description
persistent_store	string	query	False	Filter by persistent_store • Introduced in: 9.14
allow_privileged_access	boolean	query	False	Filter by allow_privileged_access • Introduced in: 9.13
name	string	query	False	Filter by name
scope.exclude_volumes	string	query	False	Filter by scope.exclude_volumes
scope.include_shares	string	query	False	Filter by scope.include_shares
scope.exclude_extension	string	query	False	Filter by scope.exclude_extension
scope.include_extension	string	query	False	Filter by scope.include_extension
scope.include_volumes	string	query	False	Filter by scope.include_volumes
scope.object_monitoring_with_no_extension	boolean	query	False	Filter by scope.object_monitoring_with_no_extension • Introduced in: 9.11
scope.include_export_policies	string	query	False	Filter by scope.include_export_policies

Name	Type	In	Required	Description
scope.exclude_export_policies	string	query	False	Filter by scope.exclude_export_policies
scope.check_extensions_on_directories	boolean	query	False	Filter by scope.check_extensions_on_directories <ul style="list-style-type: none"> Introduced in: 9.11
scope.exclude_shares	string	query	False	Filter by scope.exclude_shares
passthrough_read	boolean	query	False	Filter by passthrough_read <ul style="list-style-type: none"> Introduced in: 9.10
events.name	string	query	False	Filter by events.name
privileged_user	string	query	False	Filter by privileged_user <ul style="list-style-type: none"> Introduced in: 9.10
priority	integer	query	False	Filter by priority <ul style="list-style-type: none"> Max value: 10 Min value: 1
enabled	boolean	query	False	Filter by enabled
mandatory	boolean	query	False	Filter by mandatory
engine.name	string	query	False	Filter by engine.name
svm.uuid	string	path	True	UUID of the SVM to which this object belongs.

Name	Type	In	Required	Description
fields	array[string]	query	False	Specify the fields to return.
max_records	integer	query	False	Limit the number of records returned.
return_records	boolean	query	False	<p>The default is true for GET calls. When set to false, only the number of records is returned.</p> <ul style="list-style-type: none"> • Default value: 1
return_timeout	integer	query	False	<p>The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached.</p> <ul style="list-style-type: none"> • Max value: 120 • Min value: 0 • Default value: 1
order_by	array[string]	query	False	Order results by specified fields and optional [asc

Response

Status: 200, Ok

Name	Type	Description

include_shares	array[string]	
include_volumes	array[string]	
object_monitoring_with_no_extension	boolean	Specifies whether the extension checks also apply to objects with no extension. If this parameter is set to true, all objects with or without extensions are monitored. Default is false.

svm

Name	Type	Description
uuid	string	SVM UUID

fpolicy_policy

Name	Type	Description
allow_privileged_access	boolean	Specifies whether privileged access is required for FPolicy servers. Privileged access is used when the FPolicy server requires direct access to the cluster nodes. When this parameter is set to true, FPolicy servers can access files on the cluster using a separate data channel with privileged access.
enabled	boolean	Specifies if the policy is enabled on the SVM or not. If no value is mentioned for this field but priority is set, then this policy will be enabled.
engine	fpolicy_engine_reference	FPolicy external engine
events	array[fpolicy_event_reference]	
mandatory	boolean	Specifies what action to take on a file access event in a case when all primary and secondary servers are down or no response is received from the FPolicy servers within a given timeout period. When this parameter is set to true, file access events will be denied under these circumstances.
name	string	Specifies the name of the policy.
passthrough_read	boolean	Specifies whether passthrough-read should be allowed for FPolicy servers registered for the policy. Passthrough-read is a way to read data for offline files without restoring the files to primary storage. Offline files are files that have been moved to secondary storage.
persistent_store	string	Specifies the persistent storage name. This can then be used to enable persistent mode for FPolicy events.

Name	Type	Description
priority	integer	Specifies the priority that is assigned to this policy.
privileged_user	string	Specifies the privileged user name for accessing files on the cluster using a separate data channel with privileged access. The input for this field should be in "domain\username" format.
scope	scope	
svm	svm

target	string	The target parameter that caused the error.

Create an FPolicy configuration for an SVM

POST /protocols/fpolicy/{svm.uuid}/policies

Introduced In: 9.6

Creates an FPolicy policy configuration for the specified SVM. To create an FPolicy policy, you must specify the policy scope and the FPolicy events to be monitored.

Important notes:

- A single policy can monitor multiple events.

- An FPolicy engine is an optional field whose default value is set to native. A native engine can be used to simply block the file access based on the file extensions specified in the policy scope.
- To enable a policy, the policy priority must be specified. If the priority is not specified, the policy is created but it is not enabled.
- The "mandatory" field, if set to true, blocks the file access when the primary or secondary FPolicy servers are down.

Required properties

- `svm.uuid` - Existing SVM in which to create the FPolicy policy.
- `events` - Name of the events to monitor.
- `name` - Name of the FPolicy policy.
- `scope` - Scope of the policy. Can be limited to exports, volumes, shares or file extensions.
- `priority` - Priority of the policy (ranging from 1 to 10).

Default property values

- `mandatory` - *true*
- `engine` - *native*

Related ONTAP commands

- `fpolicy policy scope create`
- `fpolicy policy create`
- `fpolicy enable`

Parameters

Name	Type	In	Required	Description
<code>return_records</code>	boolean	query	False	The default is false. If set to true, the records are returned. • Default value:
<code>svm.uuid</code>	string	path	True	UUID of the SVM to which this object belongs.

Request Body

Name	Type	Description
allow_privileged_access	boolean	Specifies whether privileged access is required for FPolicy servers. Privileged access is used when the FPolicy server requires direct access to the cluster nodes. When this parameter is set to true, FPolicy servers can access files on the cluster using a separate data channel with privileged access.
enabled	boolean	Specifies if the policy is enabled on the SVM or not. If no value is mentioned for this field but priority is set, then this policy will be enabled.
engine	fpolicy_engine_reference	FPolicy external engine
events	array[fpolicy_event_reference]	
mandatory	boolean	Specifies what action to take on a file access event in a case when all primary and secondary servers are down or no response is received from the FPolicy servers within a given timeout period. When this parameter is set to true, file access events will be denied under these circumstances.
name	string	Specifies the name of the policy.
passthrough_read	boolean	Specifies whether passthrough-read should be allowed for FPolicy servers registered for the policy. Passthrough-read is a way to read data for offline files without restoring the files to primary storage. Offline files are files that have been moved to secondary storage.
persistent_store	string	Specifies the persistent storage name. This can then be used to enable persistent mode for FPolicy events.

Name	Type	Description
priority	integer	Specifies the priority that is assigned to this policy.
privileged_user	string	Specifies the privileged user name for accessing files on the cluster using a separate data channel with privileged access. The input for this field should be in "domain\username" format.
scope	scope	
svm	svm

Name	Type	Description
mandatory	boolean	Specifies what action to take on a file access event in a case when all primary and secondary servers are down or no response is received from the FPolicy servers within a given timeout period. When this parameter is set to true, file access events will be denied under these circumstances.
name	string	Specifies the name of the policy.
passthrough_read	boolean	Specifies whether passthrough-read should be allowed for FPolicy servers registered for the policy. Passthrough-read is a way to read data for offline files without restoring the files to primary storage. Offline files are files that have been moved to secondary storage.
persistent_store	string	Specifies the persistent storage name. This can then be used to enable persistent mode for FPolicy events.
priority	integer	Specifies the priority that is assigned to this policy.
privileged_user	string	Specifies the privileged user name for accessing files on the cluster using a separate data channel with privileged access. The input for this field should be in "domain\username" format.
scope	scope	
svm	svm	

error_arguments

Name	Type	Description
code	string	Argument code
message	string	Message argument

returned_error

Name	Type	Description
arguments	array[error_arguments]	Message arguments
code	string	Error code
message	string	Error message
target	string	The target parameter that caused the error.
