Manage role privilege details

Manage role privilege details

Overview

This API is used to configure the role privileges (tuples of REST URI paths or command/command directory paths, their access levels and optional queries, where the tuples refer to command/command directory paths). It also retrieves all of the privilege tuples for a role and can add a tuple to an existing role or creates a new role with the provided tuple. The "path" attribute can be a resource-qualified endpoint. Currently, the only supported resource-qualified endpoints are the following:

Snapshots APIs

– `/api/storage/volumes/{volume.uuid}/snapshots`

File System Analytics APIs

– `/api/storage/volumes/{volume.uuid}/files`

– `/api/storage/volumes/{volume.uuid}/top-metrics/clients`

– `/api/storage/volumes/{volume.uuid}/top-metrics/directories`

– `/api/storage/volumes/{volume.uuid}/top-metrics/files`

– `/api/storage/volumes/{volume.uuid}/top-metrics/users`

– `/api/svm/svms/{svm.uuid}/top-metrics/clients`

– `/api/svm/svms/{svm.uuid}/top-metrics/directories`

– `/api/svm/svms/{svm.uuid}/top-metrics/files`

– `/api/svm/svms/{svm.uuid}/top-metrics/users`

ONTAP S3 APIs

– `/api/protocols/s3/services/{svm.uuid}/users`

In the APIs above, and in the context of REST roles, the wildcard character * can be used in place of `{volume.uuid}` or `{svm.uuid}` to represent *all* volumes or *all* SVMs, depending on whether the REST endpoint references volumes or SVMs. The `{volume.uuid}` corresponds to the `-instance-uuid` field in the output of the "volume show" command at the diagnostic privilege level. It can also be retrieved through the REST endpoint `/api/storage/volumes`.

The role can be SVM-scoped or cluster-scoped.

Specify the owner UUID and the role name in the URI path. The owner UUID corresponds to the UUID of the SVM for which the role has been created and can be obtained from the response body of a GET request performed on one of the following APIs:

- `/api/security/roles` for all the roles

- `/api/security/roles/?scope=svm` for SVM-scoped roles
- `/api/security/roles/?owner.name=<svm-name></i>>` for roles in a specific SVM This API response contains the complete URI for each role and can be used after suffixing it with `_"privileges".</svm-name>_`

The pre-defined roles can be retrieved but cannot be updated.

Examples

Adding a privilege tuple for a REST URI/endpoint to an existing custom role

```
# The API:
POST "/security/roles/{owner.uuid}/{name}/privileges"

# The call:
curl -X POST "https://<mgmt-ip>/api/security/roles/aaef7c38-4bd3-11e9-b238-0050568e2e25/svm_role1/privileges" -d
'{"access":"readonly","path":"/api/protocols"}'
```

Adding a privilege tuple for a command or command directory to an existing custom role

```
# The API:
POST "/security/roles/{owner.uuid}/{name}/privileges"

# The call:
curl -X POST "https://<mgmt-ip>/api/security/roles/aaef7c38-4bd3-11e9-b238-0050568e2e25/svm_role1/privileges" -d
'{"access":"all","path":"statistics volume show","query":"-vserver vs1&#124;vs2 -aggregate aggr1&#124;aggr2"}'
```

Retrieving all the privilege tuples for a REST role

```
# The API:
GET "/api/security/roles/{owner.uuid}/{name}/privileges"

# The call:
curl -X GET "https://<mgmt-ip>/api/security/roles/aaef7c38-4bd3-11e9-b238-0050568e2e25/svm_role1/privileges"

# The response:
{
  "records": [
    {
      "path": "/api/application",
```

```

    "access": "all",
    "_links": {

role_privilege

A tuple containing a REST endpoint or a command/command directory path and the access level assigned to that endpoint or command/command directory. If the "path" attribute refers to a command/command directory path, the tuple could additionally contain an optional query. The REST endpoint can be a resource-qualified endpoint. At present, the only supported resource-qualified endpoints are the following

Snapshots APIs

- */api/storage/volumes/{volume.uuid}/snapshots*

File System Analytics APIs

- */api/storage/volumes/{volume.uuid}/files*
- */api/storage/volumes/{volume.uuid}/top-metrics/clients*
- */api/storage/volumes/{volume.uuid}/top-metrics/directories*
- */api/storage/volumes/{volume.uuid}/top-metrics/files*
- */api/storage/volumes/{volume.uuid}/top-metrics/users*
- */api/svm/svms/{svm.uuid}/top-metrics/clients*
- */api/svm/svms/{svm.uuid}/top-metrics/directories*
- */api/svm/svms/{svm.uuid}/top-metrics/files*
- */api/svm/svms/{svm.uuid}/top-metrics/users*
- */api/protocols/s3/services/{svm.uuid}/users*

In the above APIs, wildcard character * could be used in place of *{volume.uuid}* or *{svm.uuid}* to denote *all* volumes or *all* SVMs, depending upon whether the REST endpoint references volumes or SVMs. The *{volume.uuid}* refers to the *-instance-uuid* field value in the "volume show" command output at diagnostic privilege level. It can also be fetched through REST endpoint */api/storage/volumes*.

Name	Type	Description
_links	_links	
access	string	Access level for the REST endpoint or command/command directory path. If it denotes the access level for a command/command directory path, the only supported enum values are 'none', 'readonly' and 'all'.
path	string	Either of REST URI/endpoint OR command/command directory path.
query	string	Optional attribute that can be specified only if the "path" attribute refers to a command/command directory path. The privilege tuple implicitly defines a set of objects the role can or cannot access at the specified access level. The query further reduces this set of objects to a subset of objects that the role is allowed to access. The query attribute must be applicable to the command/command directory specified by the "path" attribute. It is defined using one or more parameters of the command/command directory path specified by the "path" attribute.

Add a privilege tuple to an existing role

POST /security/roles/{owner.uuid}/{name}/privileges

Introduced In: 9.6

Adds a privilege tuple (of REST URI or command/command directory path, its access level and an optional query, if the "path" refers to a command/command directory path) to an existing role or creates a new role with the provided tuple.

Required parameters

- `owner.uuid` - UUID of the SVM that houses this role.
- `name` - Name of the role to be updated.
- `path` - REST URI path (example: `/api/storage/volumes`) or command/command directory path (example: `snaplock compliance-clock`). Can be a resource-qualified endpoint (example: `/api/storage/volumes/43256a71-be02-474d-a2a9-9642e12a6a2c/snapshots`). Currently, resource-qualified endpoints are limited to the following:

Snapshots APIs

– `/api/storage/volumes/{volume.uuid}/snapshots`

File System Analytics APIs

– `/api/storage/volumes/{volume.uuid}/files`

– `/api/storage/volumes/{volume.uuid}/top-metrics/clients`

– `/api/storage/volumes/{volume.uuid}/top-metrics/directories`

– `/api/storage/volumes/{volume.uuid}/top-metrics/files`

– `/api/storage/volumes/{volume.uuid}/top-metrics/users`

– `/api/svm/svms/{svm.uuid}/top-metrics/clients`

– `/api/svm/svms/{svm.uuid}/top-metrics/directories`

– `/api/svm/svms/{svm.uuid}/top-metrics/files`

– `/api/svm/svms/{svm.uuid}/top-metrics/users`

In the APIs above, and in the context of REST roles, the wildcard character `*` can be used in place of `{volume.uuid}` or `{svm.uuid}` to represent *all* volumes or *all* SVMs, depending on whether the REST endpoint references volumes or SVMs. The `{volume.uuid}` corresponds to the `-instance-uuid` field in the output of the "volume show" command at the diagnostic privilege level. It can also be retrieved through the REST endpoint `/api/storage/volumes`.

- `access` - Desired access level for the REST URI path or command/command directory.
