View administrative audit logs

View administrative audit logs

Overview

These APIs return audit log records. The GET requests retrieves all audit log records. An audit log record contains information such as timestamp, node name, index and so on.

Example

Retrieving audit log records

The following example shows the audit log records. Note: The index field is used to order the audit log messages before they are displayed. If multiple entries for the same node and timestamp occur simultaneously, the index assigns an order to ensure logical consistency.

```

# The API:
/api/security/audit/messages

# The call:
curl -X GET "https://<cluster-ip>/api/security/audit/messages"

# The response:
{
  "records": [
    {
      "timestamp": "2019-03-08T11:03:32-05:00",
      "node": {
        "name": "node1",
        "uuid": "bc9af9da-41bb-11e9-a3db-005056bb27cf",
        "_links": {
          "self": {
            "href": "/api/cluster/nodes/bc9af9da-41bb-11e9-a3db-005056bb27cf"
          }
        }
      },
      "index": 4294967299,
      "application": "http",
      "location": "172.21.16.89",
      "user": "admin",
      "input": "GET /api/security/audit/destinations/",
      "state": "pending",
      "scope": "cluster",
      "role": "admin"
    }
  ],
  "num_records": 1,
  "_links": {
    "self": {
      "href": "/api/security/audit/messages"
    }
  }
}

```

Retrieve the administrative audit log viewer

GET /security/audit/messages

Introduced In: 9.6

Retrieves the administrative audit log viewer.

Parameters

Name	Type	In	Required	Description
user	string	query	False	Filter by user
location	string	query	False	Filter by location
node.name	string	query	False	Filter by node.name
node.uuid	string	query	False	Filter by node.uuid
state	string	query	False	Filter by state
command_id	string	query	False	Filter by command_id
timestamp	string	query	False	Filter by timestamp
application	string	query	False	Filter by application
scope	string	query	False	Filter by scope
index	integer	query	False	Filter by index
message	string	query	False	Filter by message
session_id	string	query	False	Filter by session_id
input	string	query	False	Filter by input
svm.name	string	query	False	Filter by svm.name
role	string	query	False	Filter by role <ul style="list-style-type: none">Introduced in: 9.17
fields	array[string]	query	False	Specify the fields to return.
max_records	integer	query	False	Limit the number of records returned.

Name	Type	In	Required	Description
return_timeout	integer	query	False	<p>The number of seconds to allow the call to execute before returning. When iterating over a collection, the default is 15 seconds. ONTAP returns earlier if either max records or the end of the collection is reached.</p> <ul style="list-style-type: none"> • Default value: 15 • Max value: 120 • Min value: 0
return_records	boolean	query	False	<p>The default is true for GET calls. When set to false, only the number of records is returned.</p> <ul style="list-style-type: none"> • Default value: 1
order_by	array[string]	query	False	Order results by specified fields and optional [asc

Response

Status: 200, Ok

Name	Type	Description
_links	_links	
num_records	integer	Number of records
records	array[security_audit_log]	

Example response

```

{
  "_links": {
    "next": {
      "href": "/api/resourcelink"
    },
    "self": {
      "href": "/api/resourcelink"
    }
  },
  "num_records": 1,
  "records": [
    {
      "_links": {
        "self": {
          "href": "/api/resourcelink"
        }
      },
      "application": "string",
      "command_id": "string",
      "index": 0,
      "input": "string",
      "location": "string",
      "message": "string",
      "node": {
        "_links": {
          "self": {
            "href": "/api/resourcelink"
          }
        },
        "name": "node1",
        "uuid": "1cd8a442-86d1-11e0-aelc-123478563412"
      },
      "role": "string",
      "scope": "string",
      "session_id": "string",
      "state": "string",
      "svm": {
        "name": "string"
      },
      "timestamp": "string",
      "user": "string"
    }
  ]
}

```

Error

Status: Default, Error

Name	Type	Description
error	returned_error	

Example error

```
{
  "error": {
    "arguments": [
      {
        "code": "string",
        "message": "string"
      }
    ],
    "code": "4",
    "message": "entry doesn't exist",
    "target": "uuid"
  }
}
```

Definitions

href

Name	Type	Description
href	string	

_links

Name	Type	Description
next	href	
self	href	

_links

Name	Type	Description
self	href	

node

Node where the audit message resides.

Name	Type	Description
_links	_links	
name	string	
uuid	string	

svm

This is the SVM through which the user connected.

Name	Type	Description
name	string	

security_audit_log

Name	Type	Description
_links	_links	
application	string	This identifies the "application" by which the request was processed.

Name	Type	Description
command_id	string	This is the command ID for this request. Each command received on a CLI session is assigned a command ID. This enables you to correlate a request and response.
index	integer	Internal index for accessing records with the same time and node. This is a 64-bit unsigned value that is used to order the audit log messages before they are displayed. If multiple entries for the same node and timestamp occur simultaneously, the index assigns an order to ensure logical consistency.
input	string	The request.
location	string	This identifies the location of the remote user. This is an IP address or "console".
message	string	This is an optional field that might contain "error" or "additional information" about the status of a command.
node	node	Node where the audit message resides.
role	string	Role of the remote user.
scope	string	Set to "svm" when the request is on a data SVM; otherwise set to "cluster".
session_id	string	This is the session ID on which the request is received. Each SSH session is assigned a session ID. Each http/ontapi/snmp request is assigned a unique session ID.
state	string	State of of this request.

Name	Type	Description
svm	svm	This is the SVM through which the user connected.
timestamp	string	Log entry timestamp. Valid in URL
user	string	Username of the remote user.

error_arguments

Name	Type	Description
code	string	Argument code
message	string	Message argument

returned_error

Name	Type	Description
arguments	array[error_arguments]	Message arguments
code	string	Error code
message	string	Error message
target	string	The target parameter that caused the error.
