OL 7

NVMe/FC Host Configuration for Oracle Linux 7.9 with ONTAP

You can configure NVMe over Fibre Channel (NVMe/FC) on initiator hosts running Oracle Linux 7.9 and ONTAP as the target.

Supportability

NVMe/FC is supported on ONTAP 9.6 or later for Oracle Linux 7.9. The Oracle Linux 7.9 host can run both NVMe and SCSI traffic through the same fibre channel (FC) initiator adapter ports. See the [Hardware Universe](#) for a list of supported FC adapters and controllers. For the most current list of supported configurations see the [NetApp Interoperability Matrix](#).

You can use the configuration settings provided in this document to configure cloud clients connected to [Cloud Volumes ONTAP](#) and [Amazon FSx for ONTAP](#).

Known limitations

- Native NVMe/FC auto-connect scripts are not available in the `nvme-cli` package. Use the HBA vendor provided external auto-connect scripts.
- By default, round-robin load balancing is not enabled in NVMe Multipath. You must write a udev rule to enable this functionality. Steps are provided in the section on Enabling NVMe/FC on Oracle Linux 7.9.
- There is no sanlun support for NVMe/FC and, as a consequence, no Linux Unified Host Utilities (LUHU) support for NVMe/FC on Oracle Linux 7.9. Use the ONTAP command output available as part of the NetApp plug-in included in the native `nvme-cli`.
- SAN booting using the NVMe-oF protocol is currently not supported.

Enable NVMe/FC

1. Install Oracle Linux 7.9 on the server.
2. After the installation is complete, verify that you are running the supported Unbreakable Enterprise kernel. See the [NetApp Interoperability Matrix](#).

```
# uname -r
5.4.17-2011.6.2.el7uek.x86_64
```

3. Upgrade the `nvme-cli` package.

```
# rpm -qa | grep nvme-cli
nvme-cli-1.8.1-3.el7.x86_64
```

4. Add the string below as a separate udev rule at `/lib/udev/rules.d/71-nvme-iopolicy-netapp-ONTAP.rules`. This enables round-robin load balancing for NVMe multipath.

```
# cat /lib/udev/rules.d/71-nvme-iopolicy-netapp-ONTAP.rules
# Enable round-robin for NetApp ONTAP
ACTION=="add", SUBSYSTEMS=="nvme-subsystem", ATTRS{model}=="NetApp ONTAP
Controller", ATTR{iopolicy}="round-robin"
```

5. On the Oracle Linux L 7.9 host, check the host NQN string at `/etc/nvme/hostnqn` and verify that it matches the host NQN string for the corresponding subsystem on the ONTAP array.

```
# cat /etc/nvme/hostnqn
nqn.2014-08.org.nvmexpress:uuid:497ad959-e6d0-4987-8dc2-a89267400874
```

```
*> vserver nvme subsystem host show -vserver vs_nvme_10
Vserver Subsystem Host NQN
-----
ol_157_nvme_ss_10_0
nqn.2014-08.org.nvmexpress:uuid:497ad959-e6d0-4987-8dc2-a89267400874
```

If the `hostnqn` strings do not match, you should use the `vserver modify` command to update the host NQN string on your corresponding ONTAP array subsystem to match to host NQN string from `etc/nvme/hostnqn` on the host.

6. Reboot the host.

Configure the Broadcom FC Adapter for NVMe/FC

1. Verify that you are using the supported adapter. For the most current list of supported adapters, see the [NetApp Interoperability Matrix](#).

```
# cat /sys/class/scsi_host/host*/modelname
LPe32002-M2
LPe32002-M2
```

```
# cat /sys/class/scsi_host/host*/modeldesc
Emulex LightPulse LPe32002-M2 2-Port 32Gb Fibre Channel Adapter
Emulex LightPulse LPe32002-M2 2-Port 32Gb Fibre Channel Adapter
```

2. NVMe support in `lpfc` is already enabled by default:

```
# cat /sys/module/lpfc/parameters/lpfc_enable_fc4_type
3
```

Newer lpfc drivers (both inbox and outbox) have lpfc_enable_fc4_type default set to 3. Therefore, you do not need to set this explicitly in the `/etc/modprobe.d/lpfc.conf`.

3. Next, install the recommended lpfc auto-connect scripts:

```
# rpm -ivh nvmeofc-connect-12.8.264.0-1.noarch.rpm
```

4. Verify that the auto-connect scripts are installed.

```
# rpm -qa | grep nvmeofc
nvmeofc-connect-12.8.264.0-1.noarch
```

5. Verify that the initiator ports are up and running.

```
# cat /sys/class/fc_host/host*/port_name
0x10000090fae0ec61
0x10000090fae0ec62

# cat /sys/class/fc_host/host*/port_state
Online
Online
```

6. Verify that the NVMe/FC initiator ports are enabled and able to see the target ports, and all are up and running.

In the example below, only a single initiator port has been enabled and connected with two target LIFs as seen in the below output:

```
# cat /sys/class/scsi_host/host*/nvme_info

NVME Initiator Enabled
XRI Dist lpfc0 Total 6144 NVME 2947 SCSI 2947 ELS 250
NVME LPORT lpfc0 WWPN x10000090fae0ec61 WWNN x20000090fae0ec61 DID
x012000 ONLINE
NVME RPORT WWPN x202d00a098c80f09 WWNN x202c00a098c80f09 DID x010201
TARGET DISCSRV ONLINE
NVME RPORT WWPN x203100a098c80f09 WWNN x202c00a098c80f09 DID x010601
TARGET DISCSRV ONLINE
```

Validate NVMe/FC

1. Verify the following NVMe/FC settings.

```
# cat /sys/module/nvme_core/parameters/multipath
Y
```

```
# cat /sys/class/nvme-subsystem/nvme-subsys*/model
NetApp ONTAP Controller
NetApp ONTAP Controller
```

```
# cat /sys/class/nvme-subsystem/nvme-subsys*/iopolicy
round-robin
round-robin
```

In the above example, two namespaces are mapped to the Oracle Linux 7.9 ANA host. These are visible through four target LIFs: two local node LIFs and two other partner/remote node LIFs. This setup shows as two ANA Optimized and two ANA Inaccessible paths for each namespace on the host.

2. Verify that the namespaces are created.

```
# nvme list
Node SN Model Namespace Usage Format FW Rev
-----
/dev/nvme0n1 80BADBKnb/JvAAAAAAC NetApp ONTAP Controller 1 53.69 GB /
53.69 GB 4 KiB + 0 B FFFFFFFF
```

3. Verify the status of the ANA paths.

```
# nvme list-subsys/dev/nvme0n1
Nvme-subsysf0 - NQN=nqn.1992-
08.com.netapp:sn.341541339b9511e8a9b500a098c80f09:subsystem.ol_157_nvme_

      "NSID" : 1,
      "UUID" : "55baf453-f629-4a18-9364-b6aee3f50dad",
      "Size" : "53.69GB",
      "LBA_Data_Size" : 4096,
      "Namespace_Size" : 13107200
    }
  ]
}
```

Enable 1MB I/O size for Broadcom NVMe/FC

ONTAP reports an MDTS (Max Data Transfer Size) of 8 in the Identify Controller data. This means the maximum I/O request size can be up to 1MB. To issue I/O requests of size 1 MB for a Broadcom NVMe/FC host, you must increase the `lpfc` value of the `lpfc_sg_seg_cnt` parameter to 256 from the default value of 64.

Steps

1. Set the `lpfc_sg_seg_cnt` parameter to 256:

```
# cat /etc/modprobe.d/lpfc.conf
options lpfc lpfc_sg_seg_cnt=256
```

2. Run a `dracut -f` command, and reboot the host:
3. Verify that `lpfc_sg_seg_cnt` is 256:

```
# cat /sys/module/lpfc/parameters/lpfc_sg_seg_cnt
256
```

This is not applicable to Qlogic NVMe/FC hosts.

NVMe/FC Host Configuration for Oracle Linux 7.8 with ONTAP

You can configure NVMe over Fibre Channel (NVMe/FC) on initiator hosts running Oracle Linux 7.8 and ONTAP as the target.

Supportability

NVMe/FC is supported on ONTAP 9.6 or later for Oracle Linux 7.8. The Oracle Linux 7.8 host can run both NVMe and SCSI traffic through the same fibre channel (FC) initiator adapter ports. Note that the Broadcom initiator can serve both NVMe/FC and FCP traffic through the same FC adapter ports. See the [Hardware Universe](#) for a list of supported FC adapters and controllers. For the most current list of supported configurations see the [NetApp Interoperability Matrix](#).

You can use the configuration settings provided in this document to configure cloud clients connected to [Cloud Volumes ONTAP](#) and [Amazon FSx for ONTAP](#).

Known limitations

- Native NVMe/FC auto-connect scripts are not available in the nvme-cli package. Use the HBA vendor provided external auto-connect scripts.
- By default, round-robin load balancing is not enabled in NVMe Multipath. You must write a udev rule to enable this functionality. Steps are provided in the section on Enabling NVMe/FC on Oracle Linux 7.8.
- There is no sanlun support for NVMe/FC and, as a consequence, no Linux Unified Host Utilities (LUHU) support for NVMe/FC on Oracle Linux 7.8. Use the ONTAP command output available as part of the NetApp plug-in included in the native nvme-cli.
- SAN booting using the NVMe-oF protocol is currently not supported.

Enabling NVMe/FC

1. Install Oracle Linux 7.8 on the server.
2. After the installation is complete, verify that you are running the supported Unbreakable Enterprise kernel. See the [NetApp Interoperability Matrix](#).

```
# uname -r
4.14.35-1902.9.2.el7uek
```

3. Upgrade the nvme-cli package.

```
# rpm -qa | grep nvme-cli
nvme-cli-1.8.1-3.el7.x86_64
```

4. Add the string below as a separate udev rule at `/lib/udev/rules.d/71-nvme-iopolicy-netapp-ONTAP.rules`. This enables round-robin load balancing for NVMe multipath.

```
# cat /lib/udev/rules.d/71-nvme-iopolicy-netapp-ONTAP.rules
# Enable round-robin for NetApp ONTAP
ACTION=="add", SUBSYSTEM=="nvme-subsystem", ATTR{model}=="NetApp ONTAP
Controller", ATTR{iopolicy}="round-robin"
```

5. On the Oracle Linux L 7.8 host, check the host NQN string at /etc/nvme/hostnqn and verify that it matches the host NQN string for the corresponding subsystem on the ONTAP array.

```
# cat /etc/nvme/hostnqn
nqn.2014-08.org.nvmexpress:uuid:75953f3b-77fe-4e03-bf3c-09d5a156fbcd
```

```
*> vserver nvme subsystem host show -vserver vs_nvme_10
Vserver Subsystem Host NQN
-----
ol_157_nvme_ss_10_0
nqn.2014-08.org.nvmexpress:uuid:75953f3b-77fe-4e03-bf3c-09d5a156fbcd
```

If the hostnqn strings do not match, you should use the vserver modify command to update the host NQN string on your corresponding ONTAP array subsystem to match to host NQN string from etc/nvme/hostnqn on the host.

6. Reboot the host.

Configuring the Broadcom FC Adapter for NVMe/FC

1. Verify that you are using the supported adapter. For the most current list of supported adapters, see the [NetApp Interoperability Matrix](#).

```
# cat /sys/class/scsi_host/host*/modelname
LPe32002-M2
LPe32002-M2
```

```
# cat /sys/class/scsi_host/host*/modeldesc
Emulex LightPulse LPe32002-M2 2-Port 32Gb Fibre Channel Adapter
Emulex LightPulse LPe32002-M2 2-Port 32Gb Fibre Channel Adapter
```

2. NVMe support in lpfc is already enabled by default:

```
# cat /sys/module/lpfc/parameters/lpfc_enable_fc4_type
3
```

Newer lpfc drivers (both inbox and outbox) have lpfc_enable_fc4_type default set to 3. Therefore, you do not need to set this explicitly in the /etc/modprobe.d/lpfc.conf.

3. Next, install the recommended lpfc auto-connect scripts:

```
# rpm -ivh nvmeofc-connect-12.4.65.0-1.noarch.rpm
```

4. Verify that the auto-connect scripts are installed.

```
# rpm -qa | grep nvmeofc
nvmeofc-connect-12.4.65.0-1.noarch
```

5. Verify that the initiator ports are up and running.

```
# cat /sys/class/fc_host/host*/port_name
0x10000090fae0ec61
0x10000090fae0ec62

# cat /sys/class/fc_host/host*/port_state
Online
Online
```

6. Verify that the NVMe/FC initiator ports are enabled and able to see the target ports, and all are up and running.

In the example below, only a single initiator port has been enabled and connected with two target LIFs as seen in the below output:

```
# cat /sys/class/scsi_host/host*/nvme_info

NVME Initiator Enabled
XRI Dist lpfc0 Total 6144 NVME 2947 SCSI 2947 ELS 250
NVME LPORT lpfc0 WWPN x10000090fae0ec61 WWNN x20000090fae0ec61 DID
x012000 ONLINE
NVME RPORT WWPN x202d00a098c80f09 WWNN x202c00a098c80f09 DID x010201
TARGET DISCSRV ONLINE
NVME RPORT WWPN x203100a098c80f09 WWNN x202c00a098c80f09 DID x010601
TARGET DISCSRV ONLINE
```

Validating NVMe/FC

1. Verify the following NVMe/FC settings.

```
# cat /sys/module/nvme_core/parameters/multipath
Y
```

```
# cat /sys/class/nvme-subsystem/nvme-subsys*/model
NetApp ONTAP Controller
NetApp ONTAP Controller
```

```
# cat /sys/class/nvme-subsystem/nvme-subsys*/iopolicy
round-robin
round-robin
```

In the above example, two namespaces are mapped to the Oracle Linux 7.8 ANA host. These are visible through four target LIFs: two local node LIFs and two other partner/remote node LIFs. This setup shows as two ANA Optimized and two ANA Inaccessible paths for each namespace on the host.

2. Verify that the namespaces are created.

```
# nvme list
Node SN Model Namespace Usage Format FW Rev
-----
/dev/nvme0n1 80BADBKnb/JvAAAAAAC NetApp ONTAP Controller 1 53.69 GB /
53.69 GB 4 KiB + 0 B FFFFFFFF
```

3. Verify the status of the ANA paths.

```
# nvme list-subsys/dev/nvme0n1
Nvme-subsysf0 - NQN=nqn.1992-

      "Size" : "53.69GB",
      "LBA_Data_Size" : 4096,
      "Namespace_Size" : 13107200
    }
  ]
}
```

Enabling 1MB I/O size for Broadcom NVMe/FC

ONTAP reports an MDTS (Max Data Transfer Size) of 8 in the Identify Controller data. This means the maximum I/O request size can be up to 1MB. To issue I/O requests of size 1 MB for a Broadcom NVMe/FC host, you must increase the `lpfc` value of the `lpfc_sg_seg_cnt` parameter to 256 from the default value of 64.

Steps

1. Set the `lpfc_sg_seg_cnt` parameter to 256:

```
# cat /etc/modprobe.d/lpfc.conf
options lpfc lpfc_sg_seg_cnt=256
```

2. Run a `dracut -f` command, and reboot the host:
3. Verify that `lpfc_sg_seg_cnt` is 256:

```
# cat /sys/module/lpfc/parameters/lpfc_sg_seg_cnt
256
```

This is not applicable to Qlogic NVMe/FC hosts.

NVMe/FC Host Configuration for Oracle Linux 7.7 with ONTAP

You can configure NVMe over Fibre Channel (NVMe/FC) on initiator hosts running Oracle Linux 7.7 and ONTAP as the target.

Supportability

NVMe/FC is supported on ONTAP 9.6 or later for Oracle Linux 7.7. The Oracle Linux 7.7 host can run both NVMe & SCSI traffic through the same fibre channel initiator adapter ports. See the [Hardware Universe](#) for a list of supported FC adapters and controllers. For the most current list of supported configurations see the [NetApp Interoperability Matrix](#).

You can use the configuration settings provided in this document to configure cloud clients connected to [Cloud Volumes ONTAP](#) and [Amazon FSx for ONTAP](#).

Known limitations

- Native NVMe/FC auto-connect scripts are not available in the nvme-cli package.
You can use the HBA vendor provided external auto-connect scripts.
- By default, round-robin load balancing is not enabled.
You must write a udev rule to enable this functionality. Steps are provided in the section on Enabling NVMe/FC on OL 7.7.
- SAN booting using the NVMe-oF protocol is currently not supported.

Enabling NVMe on OL 7.7

1. Ensure the default Oracle Linux 7.7 kernel is installed.
2. Reboot the host and verify that it boots into specified OL 7.7 kernel.

```
# uname -r
4.14.35-1902.9.2.el7uek
```

3. Upgrade to the nvme-cli-1.8.1-3.el7 package.

```
# rpm -qa|grep nvme-cli
nvme-cli-1.8.1-3.el7.x86_64
```

4. Add the string below as a separate udev rule at `/lib/udev/rules.d/71-nvme-iopolicy-netapp-ONTAP.rules`. This enables round-robin load balancing for NVMe multipath.

```
# Enable round-robin for NetApp ONTAP
ACTION=="add", SUBSYSTEM=="nvme-subsystem", ATTR{model}=="NetApp ONTAP
Controller", ATTR{iopolicy}="round-robin"
```

5. On the OL 7.7 host, check the host NQN string at `/etc/nvme/hostnqn` and verify that it matches the host NQN string for the corresponding subsystem on the ONTAP array.

```
# cat /etc/nvme/hostnqn
nqn.2014-08.org.nvmexpress:uuid:75953f3b-77fe-4e03-bf3c-09d5a156fbcd
```

```
*> vserver nvme subsystem host show -vserver vs_nvme_10
Vserver Subsystem Host NQN
-----
ol_157_nvme_ss_10_0
nqn.2014-08.org.nvmexpress:uuid:75953f3b-77fe-4e03-bf3c-09d5a156fbcd
```

If the host NQN strings do not match, you should use the `vserver modify` command to update the host NQN string on your corresponding ONTAP array subsystem to match to host NQN string from `/etc/nvme/hostnqn` on the host.

1. Reboot the host.

Configuring the Broadcom FC Adapter for NVMe/FC

1. Verify that you are using the supported adapter. For the most current list of supported adapters see the [NetApp Interoperability Matrix](#).

```
# cat /sys/class/scsi_host/host*/modelname
LPe32002-M2
LPe32002-M2
```

```
# cat /sys/class/scsi_host/host*/modeldesc
Emulex LightPulse LPe32002-M2 2-Port 32Gb Fibre Channel Adapter
Emulex LightPulse LPe32002-M2 2-Port 32Gb Fibre Channel Adapter
```

2. Copy and install the Broadcom outbox auto-connect scripts package.

```
# rpm -ivh nvme-fc-connect-12.4.65.0-1.noarch.rpm
```

3. Reboot the host.
4. Verify that you are using the recommended Broadcom `lpfc` firmware, native inbox driver & outbox auto-connect package versions. For a list of supported versions, see the [NetApp Interoperability Matrix](#).

```
# cat /sys/class/scsi_host/host*/fwrev
12.4.243.17, sil-4.2.c
12.4.243.17, sil-4.2.c

# cat /sys/module/lpfc/version
0:12.0.0.10

# rpm -qa | grep nvmeofc
nvmeofc-connect-12.4.65.0-1.noarch
```

5. Verify that `lpfc_enable_fc4_type` is set to 3.

```
# cat /sys/module/lpfc/parameters/lpfc_enable_fc4_type
3
```

6. Verify that the initiator ports are up and running.

```
# cat /sys/class/fc_host/host*/port_name
0x10000090fae0ec61
0x10000090fae0ec62
```

```
# cat /sys/class/fc_host/host*/port_state
Online
Online
```

7. Verify that the NVMe/FC initiator ports are enabled, running and able to see the target LIFs.

```
# cat /sys/class/scsi_host/host*/nvme_info
NVME Initiator Enabled
XRI Dist lpfc0 Total 6144 NVME 2947 SCSI 2977 ELS 250

Validating NVMe/FC

1. Verify the following NVMe/FC settings.

```
# cat /sys/module/nvme_core/parameters/multipath
Y

# cat /sys/class/nvme-subsystem/nvme-subsys*/model
NetApp ONTAP Controller
NetApp ONTAP Controller

# cat /sys/class/nvme-subsystem/nvme-subsys*/iopolicy
round-robin
round-robin
```

2. Verify that the namespaces are created.

```
# nvme list
Node SN Model Namespace Usage Format FW Rev
-----
/dev/nvme0n1 80BADBKnB/JvAAAAAAC NetApp ONTAP Controller 1 53.69 GB /
53.69 GB 4 KiB + 0 B FFFFFFFF
```

3. Verify the status of the ANA paths.

```
# nvme list-subsys/dev/nvme0n1
Nvme-subsysf0 - NQN=nqn.1992-
08.com.netapp:sn.341541339b9511e8a9b500a098c80f09:subsystem.ol_157_nvme_

      "Namespace_Size" : 13107200
    }
  ]
}
```

Enabling 1MB I/O size for Broadcom NVMe/FC

ONTAP reports an MDTS (Max Data Transfer Size) of 8 in the Identify Controller data. This means the maximum I/O request size can be up to 1MB. To issue I/O requests of size 1 MB for a Broadcom NVMe/FC host, you must increase the `lpfc` value of the `lpfc_sg_seg_cnt` parameter to 256 from the default value of 64.

Steps

1. Set the `lpfc_sg_seg_cnt` parameter to 256:

```
# cat /etc/modprobe.d/lpfc.conf
options lpfc lpfc_sg_seg_cnt=256
```

2. Run a `dracut -f` command, and reboot the host:
3. Verify that `lpfc_sg_seg_cnt` is 256:

```
# cat /sys/module/lpfc/parameters/lpfc_sg_seg_cnt
256
```

This is not applicable to Qlogic NVMe/FC hosts.

LPFC verbose logging

Set the lpfc driver for NVMe/FC.

Steps

1. Set the `lpfc_log_verbose` driver setting to any of the following values to log NVMe/FC events.

```
#define LOG_NVME 0x00100000 /* NVME general events. */  
#define LOG_NVME_DISC 0x00200000 /* NVME Discovery/Connect events. */  
#define LOG_NVME_ABTS 0x00400000 /* NVME ABTS events. */  
#define LOG_NVME_IOERR 0x00800000 /* NVME IO Error events. */
```

2. After setting the values, run the `dracut-f` command and reboot the host.
3. Verify the settings.

```
# cat /etc/modprobe.d/lpfc.conf options lpfc lpfc_log_verbose=0xf00083  
  
# cat /sys/module/lpfc/parameters/lpfc_log_verbose 15728771
```
