Editing IPspaces

You can use System Manager to rename an existing IPspace.

About this task

- All IPspace names must be unique within a cluster and must not consist of names that are reserved by the system, such as local or localhost.
- The system-defined “Default” IPspace and “Cluster” IPspace cannot be modified.

Steps

1. Click **Network > IPspaces**.
2. Select the IPspace that you want to modify, and then click **Edit**.
3. In the **Edit IPspace** dialog box, specify a new name for the IPspace.
4. Click **Rename**.

Deleting IPspaces

You can use System Manager to delete an IPspace when you no longer require the IPspace.

Before you begin

The IPspace that you want to delete must not be associated with any broadcast domains, network interfaces, peer relationships, or storage virtual machines (SVMs).

About this task

The system-defined “Default” IPspace and “Cluster” IPspace cannot be deleted.

Steps

1. Click **Network > IPspaces**.
2. Select the IPspace that you want to delete, and then click **Delete**.
3. Select the confirmation check box, and then click **Yes**.
